EMC TEST REPORT

KOSTEC CO., Ltd. 28(175-20, Annyeong-dong) 406-gil sejaro, Hwaseong-si, Gyeonggi-do, Korea Tel:031-222-4251, Fax:031-222-4252	Report No. : KST-FCC-220012	KOSTEC Co., Ltd. http://www.kostec.org

1. Applicant

   • Name : TOKYO ELECTRON KOREA LIMITED

   • Address : 51, Jangangongdan 6-gil, Jangan-myeon, Hwaseong-si,Gyeonggi-do, 18579 Korea

2. Test Item

   • Product Name : Advanced Data Logger

   • Model Name : DS0-SEDLAD00

3. Manufacturer

   • Name : TOKYO ELECTRON KOREA LIMITED

   • Address : 51, Jangangongdan 6-gil, Jangan-myeon, Hwaseong-si,Gyeonggi-do, 18579 Korea

4. Date of Test : Jun. 9, 2022

5. Test Method Used :

   ANSI C63.4:2014
   47 CFR Part 15 Subpart B Class A
   Industry Canada ICES-003 Issue 7
   CAN/CSA-CISPR 32:17

6. Test Result : Pass

7. Note: -

The results shown in this test report refer only to the sample(s) tested unless otherwise stated.
This test report is not related to KOLAS accreditation.

Affirmation	Tested by Name : Ho-Sik, Yeom (Signature)	Technical Manager Name : Seok-Jin, Jung (Signature)

Contents

1. General Information

1.1 Information of EUT

Product Name	Advanced Data Logger
Model Name	DS0-SEDLAD00
FCC ID	2A2YU-DS0-SEDLAD00
Serial No.	None
Type of Sample Tested	Pre-production
Supplied Power for Test	AC 120 V / 60 ㎐
Port	DC In, RJ-45 x 2 (RS232, LAN), RS485 (6 Pin Connector) x 4, Micro SD Card Slot
Whether or not ground	With-ground

This information was provided by the applicants

Clock used	32.768 ㎑, 24 ㎒, 25 ㎒
High Frequency Used	800 ㎒
H/W Version	2.0.0
S/W Version	0.9.6
F/W Version	1.0.0

Model differences

Model name	Difference	Tested (checked)
DS0-SEDLAD00	Basic Model (the basic model that was fully tested)	☒
-	Variant Models	-

1.2 Applicants Information

Applicant	TOKYO ELECTRON KOREA LIMITED
Address	51, Jangangongdan 6-gil, Jangan-myeon, Hwaseong-si,Gyeonggi-do, 18579 Korea
Telephone No.	+82-31-831-6189
Facsimile No.	+82-31-260-5290
Contact person	Jeong Woon Lee (Ju.lee@tel.com)

2. Information of Testing Laboratory

Test laboratory and address

KOSTEC Co., Ltd.

28(175-20,Annyeong-dong)406-gil sejaro, Hwaseong-si Gyeonggi-do, Korea

Telephone Number: 82-31-222-4251

Facsimile Number: 82-31-222-4252

Registration information

KOLAS No.: KT232

RRA(National Radio Research Agency): KR0041

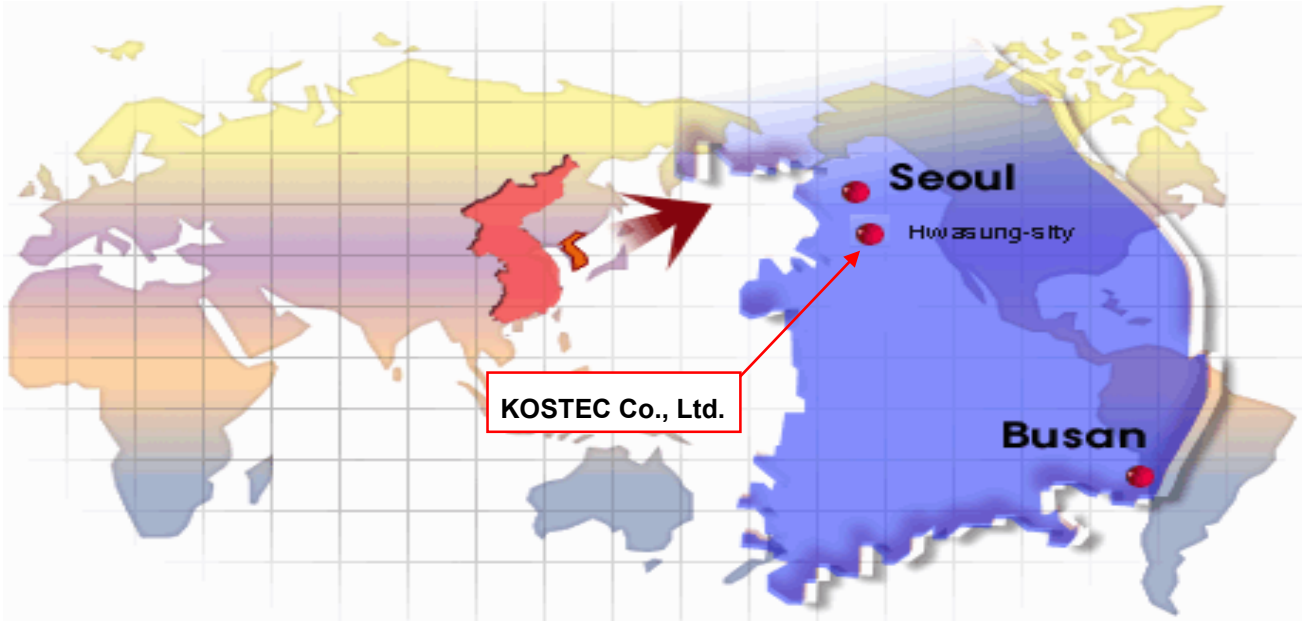
FCC Designation No.: KR0041

IC Designation No.: KR0041

VCCI Membership No. : 2005

VCCI Registration No. of EMI site: R-14202 / C-14685 / G-10834 / T-12225

Route Map of Measurement Facility



3. Test System Configuration

3.1 Operation Environment

Test Items	Test date	Temp (℃)	Humidity (%R.H.)
Conducted Emissions	Jun. 09	19	40
Radiated Emission (Below 1 ㎓)	Jun. 09	23	41 ~ 42
Radiated Emission (Above 1 ㎓)	Jun. 09	21 ~ 22	41

3.2 Measurement Uncertainty

Test Items	k_p	Expanded Uncertainty	Note
Conducted Emissions	2	±3.44 ㏈	-
Radiated Emission (Below 1 ㎓)	2	±4.26 ㏈	-
Radiated Emission (Above 1 ㎓)	2	±3.70 ㏈	-

3.3 Sample calculation

Conducted Emission

The field strength is calculated by adding the LISN factor, cable loss from the measured reading. The sample calculation is as follows:

FS = MR + Factor
MR = Meter Reading
Factor = Ant. Factor, Cable Loss, etc

If MR is 30 ㏈, LISN Factor 1 ㏈, CL 1 ㏈
The result (MR) is 30 + 1 + 1 = 32 ㏈㎶

4. Condition and Procedure for Test activities

4.1 Configuration of EUT

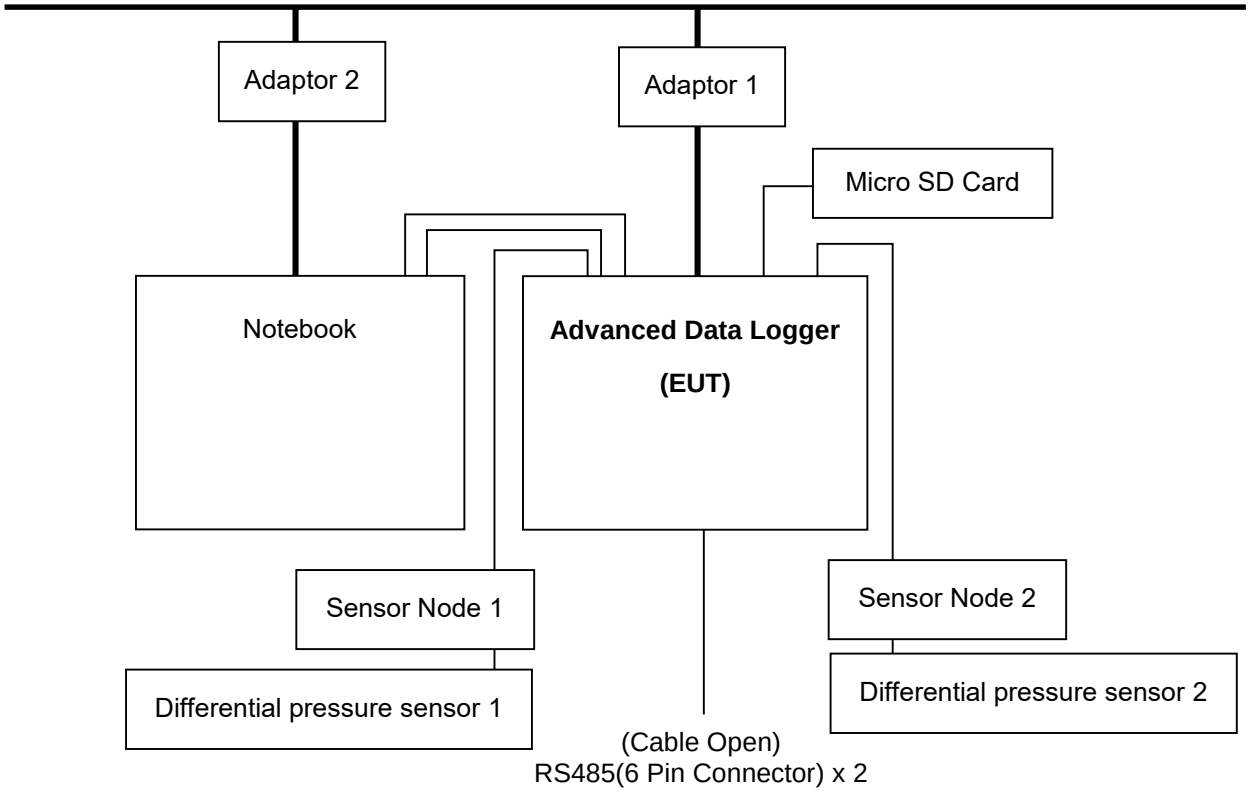
4.4 EUT Test Configuration



4.5 Operating conditions

After setting, the each I/O Ports of EUT was connected to peripherals..
And then, the operating status of EUT and information measured by the differential pressure sensor is stored on the micro SD card through “TeraTerm” program of notebook
And run "KSLogTool" program to access IP and check the measured information from the differential pressure sensor.
And tested with "Ping Test" between EUT and notebook.

5. Summary of Test Results

5.1 Modification to the EUT

-

5.2 Summary of Test Results

The following tests were performed on a sample submitted for evaluation of compliance with FCC Part 15 Subpart B		
Clause	Test Requirement	Result
15.107	Conducted Emissions	Pass
15.109	Radiated Emission (Below 1 ㎓)	Pass
15.109	Radiated Emission (Above 1 ㎓)	Pass

Note 1) N/A mean is Not Applicable.
Note 2) Decision rule: The statement of conformity in this report was judged according to the specification limits of the standard without considering uncertainty.
Note 3) This equipment has been shown to be in compliance with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified in ANSI C63.4-2014

6. Test Results

6.1 Conducted Emission

6.1.1 Measurement procedure

In the range of 0.15 ㎒ to 30 ㎒, the conducted disturbance was measured and set-up was made accordance with ANSI C63.4.
If the EUT is table top equipment, it was placed on a wooden table with a height of 0.8 m above the reference ground plane and 0.4 m from the conducting wall of the shielded room.
Also if the EUT is floor-standing equipment, it was placed on a non-conducted support with a height up to 0.15 m above the reference ground plane.
Connect the EUT's power source lines to the appropriate power mains / peripherals through the LISN. All the other peripherals are connected to the 2nd LISN, if any.
Unused measuring port of the LISN was resistively terminated by 50 ohm terminator.
The measuring port of the LISN for EUT was connected to spectrum analyzer.
Using conducted emission test software, the emissions were scanned with peak detector mode.
After scanning over the frequency range, suspected emissions were selected to perform final measurement. When performing final measurement, the receiver was used which has Quasi-Peak detector and Average detector.
By varying the configuration of the test sample and the cable routing it was attempted to maximize the emission.
For further description of the configuration refer to the picture of the test set-up.

6.1.2 Limit for conducted emission

(1) Conducted emission at mains ports.

Frequency range [㎒]	Limits [dB(μV)]			
	Quasi-peak		Average	
	Class A	Class B	Class A	Class B
0.15 to 0.50	79	66 to 56	66	56 to 46
0.50 to 5	73	56	60	46
5 to 30		60		50
Note 1 The lower limit shall apply at the transition frequencies. Note 2 The limit decreases linearly with the logarithm of the frequency in the range 0.15 ㎒ to 0.5 ㎒.				

Note) 1. Emission level = Reading value + Correction factor.
2. Correction factor = Cable loss + Insertion loss of LISN
3. Margin = Limit - Emission level

6.1.3 Used equipment

6.2 Radiated Emission

6.2.1 Measurement procedure

The radiated disturbance was measured and set-up was made accordance with ANSI C63.4.
If the EUT is tabletop equipment, it was placed on a wooden table with a height of 0.8 m above the reference ground plane and 3 m or 10 m away from the interference receiving antenna in the 10 m semi-anechoic chamber.
Also if the EUT is floor-standing equipment, it was placed on a non-conducted support with a height up to 0.15 m above the reference ground plane.
Rotate the EUT from (0 - 360)° and position the receiving antenna at heights from (1 - 4) m above the reference ground plane continuously to determine associated with higher emission levels and record them.
The measurement was made in both the vertical and horizontal polarization, and the maximum value is presented in the report.
For below 1 ㎓ frequency range, Quasi-Peak detector with 120 ㎑ RBW was used.
Also Peak and Average detector with 1 ㎒ RBW were used for above 1 ㎓ frequency range.
For further description of the configuration refer to the picture of the test set-up.

6.2.2 Limit for Radiated emission

- The test frequency range of Radiated disturbance measurements are listed below.

Highest frequency generated or used in the device or on which the device operates or tunes [㎒]	Upper frequency of measurement range [㎒]
Below 108	1 000
108 – 500	2 000
500 – 1 000	5 000
Above 1 000	5^{th} harmonic of the highest frequency or 40 ㎓, whichever is lower

(1) Limit for Radiated emission below 1 000 ㎒

Frequency range [㎒]	Class A Equipment (10 m distance)	Class B Equipment (3 m distance)
	Quasi-peak [dB(μV/m)]	Quasi-peak [dB(μV/m)]
30 to 88	39.1	40
88 to 216	43.5	43.5
216 to 960	46.4	46
960 to 1 000	49.5	54
Note 1 The lower limit shall apply at the transition frequency. Note 2 Additional provisions may be required for cases where interference occurs. Note 3 According to 15.109(g), as an alternative to the radiated emission limit shown above, digital devices may be shown to comply with the standards(CISPR), Pub. 22 shown as below.		
Frequency range [㎒]	**Class A Equipment (10 m distance)**	**Class B Equipment (10 m distance)**
	Quasi-peak [dB(μV/m)]	**Quasi-peak [dB(μV/m)]**
30 to 230	40	30
230 to 1 000	47	37

(2) Limits for Radiated emission above 1 000 ㎒

Frequency [㎓]	Class A Equipment (@10 m)		Class B Equipment (@3 m)	
	Peak [dB(μV/m)]	Average [dB(μV/m)]	Peak [dB(μV/m)]	Average [dB(μV/m)]
1 to 40	69.54	49.54	73.98	53.98

Note) 1. Emission level = Reading value + Correction factor.
2. Correction factor = Cable loss - Amp gain + Antenna factor + Distance compensation value
3. Margin = Limit - Emission level
