Note

1. Please format Micro SD card on the camera before initial use, and choose the high speed brand card. (Class 10/U3 or above)

2. Make sure the power to the machine is off when inserting and removing the SD card.

3. Parking Surveillance Mode must be activated with Smart Hardwire Kit. (Not include)

4. If the car starts, the dash cam is in a black screen, not working properly, please manually long press the "power" button, dash cam will turn on and work.

5. If the GPS on the app can't be displayed, please disconnect the WiFi first.

6. Please ensure that the lens and the front/rear glass is clean before use, otherwise it will affect the picture quality.

7. Don't disassemble or repair equipment and accessories except for maintenance personnel.

8. This camera uses a wide-angle lens, so it may produce distortion and shadows in a part of the image.
This is a characteristic of wide-angle lenses and is not unusual.

9. If the camera is not operated for up to 3 minutes, the screen will automatically turn off.

Note: It's not damaged or shut down.

Remove/Insert the SD card

In this manual, "Micro SD card" is referred to as "SD card" unless otherwise noted.

※This dash cam supports micro SD cards of 8 GB or more and 256 GB or less. (SD write speed U3 or higher)

Warnings

- After turning the power off, make sure that the power indicator LED (Red) is off for at least 3 seconds before the next process.
- ! • The SD card can only be inserted in one direction. Insert the SD card as shown in the figure below. Pushing the card in forcibly may damage the dash cam.
- Please ensure to format SD cards before using them in the dash cam.

1.Remove the SD Card

If the optional multi-battery or power supply unit with voltage monitoring function is connected, disconnect the power cord from the main unit first.

1-1 Turn off the car's engine.

After turning off the power, make sure that the power LED is off for at least 3 seconds.

1-2 Push the SD card in, let it pop out a little, then pull it out.

- ※ Please be careful not to lose the SD card when it pops out.
- ※ The SD card is so small that if dropped in the car, it may get into the space between the seats.

2. Install the SD card into the front cam.

2-1 Turn off the car's engine.

After turning off the power, make sure that the power LED is off for at least 3 seconds.

2-1 Insert the SD card.

Push the card into the SD card slot until you hear a "click" sound.

Installation

1. Determine the mounting position

1-1

Determine the position where the mount is attached to the windshield.

※Note: Please refer to the recommended mounting position for the main unit installation location.

●Location of the Front Cam

Different states have different laws regarding the installation of dash cams.

In general, a dash cam is considered an obstruction if it occupies more than 5 inches on the driver's side or 7 inches on the passenger's side. This can result in you being ticketed (or worse, having an accident).

2. Use the mount to predict the position of the front cam to be installed (Attach the electrostatic adhesive film)

2-1 Wipe the windshield clean. (To avoid that the video quality is affected by dirty)

Wipe the windshield clean of dirt and grease with a commercially available cleaning cloth.

※If there is dirt or dust on the windshield, or if the electrostatic adhesive film is repeatedly removed, the adsorption strength may decrease and the dash cam may fall while driving.

2-2 Tear of paper from the electrostatic film's adsorption sheet side.

2-3 Attach the electrostatic film to the windshield at the position where you decided to install the front cam.

3. Attach the front cam to the windshield

3-1 Combine the mount and the front cam.

3-2 Tear off the paper from the electrostatic film's another side.

3-3 Tear off the paper from the adhesive tape on the mount.

3-4 Attach the mount and front cam to the electrostatic film.

※ To strengthen the fixation, leave the mount for at least 24 hours after attaching it, and be careful not to pull or apply excessive force until the 3M adhesive tape is firmly attached.

- 3-5** Adjust the angle of mount so that the lens is level with the direction of vehicle travel. Tighten the nut to fix the dash cam.

4. Connect the front cam to the car

- 4-1** Connect the cigarette charger cable to the mount's Type-C port.

4-2 Plug the cigarette charger cable into the cigarette lighter port.

※Clean the cigarette lighter port.

4-3 Turn on the car, check the video, and adjust the angle.

After connecting the front cam to the car, turn on the car and adjust the mount's angle based on the video.

※When installing the front cam, adjust the angle so that the direction of the lens is horizontal to the direction of travel of the car.

Installation of Wire

1. Install the power cable

- ※ Hide the cigarette charger cable. (use a crowbar to hide the charger cable)
- ※ Use the crowbar to fix and hide the rear cable at the seam of the car, and use the wire clip to fix the rear cable the rear windshield.

1-1 Install the power cable

Please wire according to the overall wiring image shown in the image.

※If setting up the power cable is difficult, secure the cable with the clip.

●Overall wiring image

Installation of Rear Cam

※If there is a film attached to the rear windshield.

Simply cut off the film at the mounting position and attach the rear cam.

※Installation of the rear cam may be difficult depending on the vehicle model (such as vehicles with vertical rear doors).

※Please note that wiring the rear cam near the radio antenna may reduce the sensitivity of the radio.

1. Attach the electrostatic film

1-1 Wipe the rear windshield clean.

Use a commercially available cleaning cloth to wipe the rear glass clean of dirt and grease.

※If there is dirt or dust on the windshield, or the electrostatic film is repeatedly removed, the adsorption strength will decrease and the cam may fall while driving.

1-2 Tear off the paper from the electrostatic film's adsorption sheet side.

1-3 Attach the electrostatic film.

Attach the electrostatic film to the rear windshield at the position where you decided to install the rear cam.

2. Mount the rear cam to the rear windshield.

2-1 Tear off the paper from the electrostatic film's another side.

2-2 Tear off the paper from the adhesive tape on the rear cam.

2-3 Attach the 3M adhesive tape on the rear cam onto where the electrostatic film mark out, to make it stable.

※Attention: Adjust the "YEECORE" logo on the rear cam to face you and make sure the "YEECORE" logo is not upside down. Otherwise, the rear image will be upside.

※For best results, leave the rear cam in place for at least 24 hours and don't pull until the 3M adhesive tape is firmly attached.

Make sure that the rear cam doesn't cover with the rear windshield heating wire.

3. Connect the rear cam to the front cam.

3-1 Connect the rear cable to the rear cam.

Insert the rear cable into the rear cam Type-C port.

3-2

Connect the rear cable to the front cam.

Plug the other end of the rear cable into the Type-C port of the front cam.

Scan the QR code and you can view the installation video on Youtube.
