1 TEST STANDARDS

The tests were performed according to following standards:

<u>FCC Rules Part 15.247</u>: Frequency Hopping, Direct Spread Spectrum and Hybrid Systems that are in operation within the bands of 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz. <u>ANSI C63.10-2013</u>: American National Standard for Testing Unlicensed Wireless Devices

2 SUMMARY

2.1 General Remarks

2.1 General Remarks		
Date of receipt of test sample		May 03, 2022
Testing commenced on		May 03, 2022
Testing concluded on	:	May 16, 2022

2.2 **Product Description**

Product Description:	Panther X2 gateway
Model/Type reference:	Panther X2
Power supply:	DC 12.0V From Adapter
Adapter information:	Model:GA-1202000C Input:AC 100-240V 50/60Hz 0.6A Output:DC 12V / 2000mA
Testing sample ID:	CTA2205005-1# (Engineer sample), CTA2205005-2# (Normal sample)
Lora	
Modulation Technology:	Hybrid system
Operation frequency:	902.3MHz-914.9MHz
Channel spacing:	200KHz
Channel number:	64 CT
Antenna type:	External antenna
Antenna gain:	3.00 dBi

2.3 Equipment Under Test

Power supply system utilised

Power supply voltage		0	230V / 50 Hz	0	120V / 60Hz
TES			12 V DC	0	24 V DC
GIN		0	Other (specified in blank be	low)
		<u>[</u>	DC 12.0V From Adapter		
2.4 Short description of the	Ec	qui	pment under Test (EU	T)	
This is a PANTHER-X2 gateway For more details, refer to the user's n	nanı	ual	of the EUT.		GMCI

2.4 Short description of the Equipment under Test (EUT)

2.5 EUT operation mode

The Applicant provides communication tools software(Engineer mode) to control the EUT for staying in continuous transmitting (Duty Cycle more than 98%) and receiving mode for testing . There are 64 channels CTATESTING provided to the EUT and Channel 00/31/63 were selected to test.

2.7 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for the device filing to comply with Section 15.247 of the FCC Part 15, Subpart C Rules.

2.8 Modifications

No modifications were implemented to meet testing criteria.

3 TEST ENVIRONMENT

3.1 Address of the test laboratory

Shenzhen CTA Testing Technology Co., Ltd.

Room 106, Building 1, Yibaolai Industrial Park, Qiaotou Community, Fuhai Street, Bao 'an District, Shenzhen, China

3.2 Test Facility

The test facility is recognized, certified, or accredited by the following organizations: FCC-Registration No.: 517856 Designation Number: CN1318

Shenzhen CTA Testing Technology Co., Ltd. has been listed on the US Federal Communications Commission list of test facilities recognized to perform electromagnetic emissions measurements.

A2LA-Lab Cert. No.: 6534.01

Shenzhen CTA Testing Technology Co., Ltd. has been listed by American Association for Laboratory Accreditation to perform electromagnetic emission measurement

The 3m-Semi anechoic test site fulfils CISPR 16-1-4 according to ANSI C63.10 and CISPR 16-1-4:2010.

3.3 Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

Rac	liated	Emission:	

Temperature:	24 ° C
	ATA
Humidity:	45 %
Atmospheric pressure:	950-1050mbar

AC Power Conducted Emission:

Temperature:	25 ° C
INO	
Humidity:	46 %
	-ING
Atmospheric pressure:	950-1050mbar

Conducted testing:

Temperature:	25 ° C
	G
Humidity:	44 %
	and the second sec
Atmospheric pressure:	950-1050mbar

3.4 Summary of measurement results

	Test Specification clause	Test case	Test Mode	Test Channel		orded eport	Test result
	§15.247(a)(1)	Carrier Frequency separation	Hybrid system	⊠ Lowest ⊠ Middle ⊠ Highest	Hybrid system	Middle	Compliant

CTATE	§15.247(a)(1)	Spectrumbandwidth of aFHSS system20dB bandwidth	Hybrid system	 ☑ Lowest ☑ Middle ☑ Highest 	Hybrid system	⊠ Lowest ⊠ Middle ⊠ Highest	Compliant
	§15.247(b)(1)	Maximum output peak power	Hybrid system	 ☑ Lowest ☑ Middle ☑ Highest 	Hybrid system	⊠ Lowest ⊠ Middle ⊠ Highest	Compliant
	§15.247(d)	Band edgecompliance conducted	Hybrid system	Lowest	Hybrid system	 ☑ Lowest ☑ Highest 	Compliant
ĮG	§15.205	Band edgecompliance radiated	Hybrid system	⊠ Lowest ⊠ Highest	Hybrid system	⊠ Lowest ⊠ Highest	Compliant
	§15.247(d)	TX spuriousemissions conducted	Hybrid system	⊠ Lowest ⊠ Middle ⊠ Highest	Hybrid system	⊠ Lowest ⊠ Middle ⊠ Highest	Compliant
	§15.247(d)	TX spuriousemissions radiated	Hybrid system	Lowest Middle	Hybrid system	 ☑ Lowest ☑ Middle ☑ Highest 	Compliant
	§15.209(a)	TX spurious Emissions radiated Below 1GHz	Hybrid system	Lowest Middle	Hybrid system	Middle	Compliant
	§15.107(a) §15.207	Conducted Emissions 9KHz-30 MHz	Hybrid system	 ☑ Lowest ☑ Middle ☑ Highest 	Hybrid system	⊠ Middle	Compliant

Remark:

1. The measurement uncertainty is not included in the test result.

2. We tested all test mode and recorded worst case in report

3.5 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to TR-100028-01" Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 1" and TR-100028-02 "Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 2" and is documented in the Shenzhen CTA Testing Technology Co., Ltd. quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for Shenzhen CTA Testing Technology Co., Ltd. :

<p< th=""><th>Test</th><th>Range</th><th>Measurement Uncertainty</th><th>Notes</th></p<>	Test	Range	Measurement Uncertainty	Notes
	Radiated Emission	30~1000MHz	4.06 dB	(1)
	Radiated Emission	1~18GHz	5.14 dB	(1)
	Radiated Emission	18-40GHz	5.38 dB	(1)
	Conducted Disturbance	0.15~30MHz	2.14 dB	(1)

(1) This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

4 TEST CONDITIONS AND RESULTS

AC Power Conducted Emission 4.1

TEST CONFIGURATION

TEST PROCEDURE

1 The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10-2013.

2 Support equipment, if needed, was placed as per ANSI C63.10-2013

3 All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10-2013

4 The EUT received power from adapter, the adapter received AC120V/60Hz and AC 240V/60Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.

5 All support equipments received AC power from a second LISN, if any.

6 The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.

7 Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.

8 During the above scans, the emissions were maximized by cable manipulation.

AC Power Conducted Emission Limit

For intentional device, according to § 15.207(a) AC Power Conducted Emission Limits is as following :

	Limit	(dBuV)
Frequency range (MHz)	Quasi-peak	Average
0.15-0.5	66 to 56*	56 to 46*
0.5-5	56	46
5-30	60	50
* De serve se suidh dhe ble se sidh as af dhe fas asse	- NG	

* Decreases with the logarithm of the frequency.

TEST RESULTS

Remark:

1. Lora were test at Low, Middle, and High channel; only the worst result of Lora Middle Channel was reported as below:

2. Both 120 VAC, 50/60 Hz and 240 VAC, 50/60 Hz power supply have been tested, only the worst result of 120 VAC, 60 Hz was reported as below:

NO.	Freq. [MHz]	Factor [dB]	Reading[dB µV]	Value [dBµV]	Limit [dBµV]	Margin [dB]	Reading [dBµV]	Value [dBµV]	Limit [dBµV]	Margin [dB]	Verdict

4.2 **Radiated Emission**

TEST CONFIGURATION

Frequency range 30MHz - 1000MHz

Frequency range above 1GHz-25GHz

6.

TEST PROCEDURE

- 1. The EUT was placed on a turn table which is 0.8m above ground plane when testing frequency range 9 KHz -1GHz; the EUT was placed on a turn table which is 1.5m above ground plane when testing frequency range 1GHz - 25GHz.
- 2. Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0° to 360° to acquire the highest emissions from EUT.
- 3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- Repeat above procedures until all frequency measurements have been completed. 4.
- Radiated emission test frequency band from 9KHz to 25GHz. 5.

. The	e distance between test a	e states:

	Peak Value: RBW=1MHz/VBW=3MHz,						
1GHz-40GHz	Sweep time=Auto	Peak					
1912-40912	Average Value: RBW=1MHz/VBW=10Hz,	геак					
	Sweep time=Auto						

Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor(if any) from the measured reading. The basic equation with a sample calculation is as follows:

FS = RA + AF + CL - AG

sample calculation is as follows.	STINE
FS = RA + AF + CL - AG	CTATES
Where FS = Field Strength	CL = Cable Attenuation Factor (Cable Loss)
RA = Reading Amplitude	AG = Amplifier Gain
AF = Antenna Factor	57

Transd=AF +CL-AG

RADIATION LIMIT

For intentional device, according to § 15.209(a), the general requirement of field strength of radiated emission from intentional radiators at a distance of 3 meters shall not exceed the following table. According to § 15.247(d), in any 100kHz bandwidth outside the frequency band in which the EUT is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the100kHz bandwidth within the band that contains the highest level of desired power.

The pre-test have done for the EUT in three axes and found the worst emission at position shown in test setup photos.

Frequency (MHz)	Distance (Meters)	Radiated (dBµV/m)	Radiated (µV/m)
0.009-0.49	3	20log(2400/F(KHz))+40log(300/3)	2400/F(KHz)
0.49-1.705	3	20log(24000/F(KHz))+ 40log(30/3)	24000/F(KHz)
1.705-30	3	20log(30)+ 40log(30/3)	30
30-88	3	40.0	100
88-216	3	43.5	150
216-960	3	46.0	200
Above 960	3	54.0	500

GAA CTATES

TEST RESULTS

Remark:

- This test was performed with EUT in X, Y, Z position and the worse case was found when EUT in X 1. position.
- For below 1GHz testing recorded worst at Lora middle channel. 2.
- 3. Radiated emission test from 9 KHz to 10th harmonic of fundamental was verified, and no emission found except system noise floor in 9 KHz to 30MHz and not recorded in this report.

CH63	18.761		

Note: 1.The test results including the cable lose.

20dB Bandwidth 4.4

Limit

For frequency hopping systems operating in the 902MHz-928MHz no limit for 20dB bandwidth.

Test Procedure

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 30 KHz RBW and 100 KHz VBW.

The 20dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 20dB.

Test Configuration

Report No.: CTA22050500503

Out-of-band Emissions 4.8

Limit C

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, pro-vided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter com-plies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required.

Test Procedure

Connect the transmitter output to spectrum analyzer using a low loss RF cable, and set the spectrum analyzer to RBW=100 kHz, VBW= 300 kHz, peak detector, and max hold. Measurements utilizing these setting are GTA CTATESTING made of the in-band reference level, bandedge and out-of-band emissions.

Test Configuration

Test Results

Remark: The measurement frequency range is from 30MHz to the 10th harmonic of the fundamental frequency. The lowest, middle and highest channels are tested to verify the spurious emissions and bandage measurement data.

Test plot as follows:

Band-edge Measurements for RF Conducted Emissions:

4.9 Antenna Requirement

Standard Applicable

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And according to FCC 47 CFR Section 15.247 (c), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

Refer to statement below for compliance

The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited. Further, this requirement does not apply to intentional radiators that must be professionally installed.

Antenna Connected Construction

The maximum gain of antenna was 3.00 dBi. Antenna interface type is SMA reverse interface.

Remark:The antenna gain is provided by the customer , if the data provided by the customer is not accurate, Shenzhen CTA Testing Technology Co., Ltd. does not assume any responsibility.
