

Blueskysea B1W dash camera user manual

Thank you for you choosing Blueskysea B1W dash camera,please read this user manual carefully before use, and keep it for future reference.If you need any assistance,please feel free to contact our customer support team by email support@blueskysea-inc.com

Main features

1. B1W size is only 90mm x 29mm x 38mm,without LCD screen.
The small size and all black form factor make it very stealthy.
2. Camera body supports 360° rotation, easy to adjust lens direction if it is necessary.
3. 150° ultra wide angle lens,equipped with low light EXMOR sensor, offering enhanced video quality at night.
4. B1W uses two super capacitor instead of battery,which is a better choice to operate dash cam in hot environments (batteries tend to swell / expand in the heat)
5. Wi-Fi connection to view footage,download videos,and change settings via an app on your iphone or Android device.
6. Voice indicator feature,easy to know camera's exact working status,as video start/stop,card error,etc.
7. Comes with parking mode function, which is triggered by G-sensor.When an impact is detected by the G-sensor, the camera starts video recording for 30 seconds automatically. (The hardwire kit needed for parking mode is not included in standard package,buyer need to buy it separately.)

Basic operation

Installation diagram

Installation

1. Insert a memory card to camera
2. Attach camera to the window with adhesive mount
Before the device can be used in a car, it is essential to first install a properly attached window with adhesive mount. Make sure that you place the camera in a safe, appropriate location where it will not obstruct the driver's view.
3. Connect the USB charger to the car's 12V DC Outlet/ Cigarette lighter to start recording. Do not remove card during camera recording.
4. When not in use, to disconnect USB charger and slide camera off its adhesive mount to take away the camera with you.

Insert/remove Micro SD card

1. Format the card as FAT32 by computer before use; You can use GuiFormat for formatting 64Gb card as FAT32.
2. Insert one micro SD card (Class 10 grade, 16GB above) into camera and push until it locks into place.
3. To remove the micro SD card first stop recording or disconnect camera from power and then press the end of the micro SD card until it clicks out from slot.

Take Recording

Camera will start recording automatically when plugged into the car cigarette lighter socket, no need extra operation. The LED indicator light flashes during video recording. If camera WIFI connection is off, the led flashes red during video recording; if camera WIFI connection is on, the led flashes green during video recording.

Lock video clip

1. Short press "lock" button from the side of the camera to lock video clips manually
2. Video clips will be Locked automatically when G-sensor triggered by some shock

Wi-Fi Switch On/Off

1. Long press "lock" button for 5 seconds to switch Wi-Fi function On/Off.
2. Its led light indicates red when Wi-Fi Off; Its led light indicates Green when Wi-Fi On.

Parking Mode recording

- 1, Camera needs permanent power source for parking mode to work. For example, you can use a 5V/1.5A power bank, or a 12V to 5V hardwire kit connected to your car 12V always on ACC slot from fuse box (or power directly to your car battery).
- 2, Press "stop recording" button in mobile phone APP to activate parking mode before leaving your car.
- 3, During parking mode, camera will record video for 30 seconds automatically when an impact is detected by the G-sensor.

Note: The powerbank or hardwire kits are NOT included in package, buyer needs to buy separately.

FAQ

1.The DVR can not make recording

Please use a high speed class Micro SD card (Class 6 or above) for camera. Also, format memory card in the app when you get card error.

2.The DVR can not loop recording

Please check if micro SD card has enough free space, and manually format memory card by APP or computer if necessary. Do not use Sandisk Ultra Micro SD cards.

3. File Error occurs when replay photos or videos

This happens due to bad quality Micro SD card or the space corruption of Micro SD card, please format the Micro SD card or replace the card.

4. The video file is not clear

Please check if the lens is clean, clean the lens with soft cloth; Also your car windshield to be perfect clean inside and outside.

5. There are cross strips in the video when recording

Switch the frequency to "50Hz" or 60Hz" according to standard local Flicker Frequency.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction
