Cloud storage packages

- Purchase: Click to view a variety of detailed packages, Can choose to buy
- Plans: You can view the usage of the purchased package
- Activate: You can view the status of the bound devices, And bind the device to use

common problem

problem	Cause/solution
What should I do if the device is unsuccessfully added?	For the first connection between the camera and the router, please connect to the distribution network at close range. Check whether the wifi password is correct and whether the phone can connect to the network normally. Restart the router, restart the camera, and try to connect to the Internet again.
What if the display device is offline?	First confirm whether the power supply and network are normal. If there is no problem, power off the camera and restart it. For example, the camera voice prompt system is starting, the system is started, the wifi connection is in progress. The camera voice prompts that the wifi connection is not completed, which means that the camera cannot connect to the router wifi. Check if the camera is too far away from the router, the signal is not good, and the camera cannot be connected to the wireless wifi. Or reset the camera to factory settings, and then reconnect to the network.
Watch screen display password. What should I do if I make a mistake?	Enter the password input that is prompted to set up on the screen when the camera is connected for the first time. The password is a combination of 6-8 digits in English. The factory default user name of the device is admin. If there is no change, it is the default factory user name admin. If you have forgotten the password, you need to restore the camera to factory settings, find the camera to restore factory settings button, press and hold for about 10 seconds, and the camera voice prompts to restore the factory settings, you can reconnect to the network settings.

problem	Cause/solution
Memory card shows no storage or abnormal?	If the memory card has been used in other equipment, you need to insert the memory card into the computer to format it. The camera does not support the insertion and removal of the memory card when the camera is powered on, and the camera needs to be powered off to insert and remove the memory card. The memory card is still not recognized after restarting the camera, please replace it with a new card and test.
What should I do if I cannot receive the warning message?	Confirm whether the system has disabled the message push permission of V380Pro. If you turn it off, please enable the message notification permission in the phone settings. And check whether message push is turned off in the device settings. You need to turn on the alarm function in the camera APP settings to receive alarm messages.
No place to install monitoring. Can the network be used?	If it can be used, the mobile phone must be within 10 meters of the camera before it can be used. The camera has its own AP hotspot signal, and the mobile phone can be directly connected for use.
One camera can be multiple phones watch at the same time?	Yes, it can watch 10 mobile phones at the same time. Download the APP on another mobile phone and log in to the APP as a registered user. Follow the prompts on the first mobile phone to share the device, and enter the account number to immediately share the device with you.
FCC Statement	This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: *Reorient or relocate the receiving antenna. *Increase the separation between the equipment and receiver. *Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. *Consult the dealer or an experienced radio/TV technician for help. Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment. This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. RF Exposure Information This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.
