

# **FCC TEST REPORT**

Test report
On Behalf of
Hong Kong Etech Groups Ltd.
For
Wireless Charger
Model No.: EWL-21182-XH

FCC ID: 2A3ZO-EWL21182-XH

Prepared For: Hong Kong Etech Groups Ltd.

16/F, Block C, 2nd Phase of Central Avenue, Haihong Industrial Area, Xixiang,

Baoan, Shenzhen, China

Prepared By: Shenzhen HUAK Testing Technology Co., Ltd.

1-2/F., Building B2, Junfeng Zhongcheng Zhizao Innovation Park, Heping,

Fuhai Street, Bao'an District, Shenzhen, Guangdong, China

Date of Test: Apr. 26, 2022 ~ May. 10, 2022

Date of Report: May. 10, 2022

Report Number: HK2204261766-2E

Note:

1. For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

Report No.: HK2204261766-2E

2

The EUT antenna is Coil Antenna. No antenna other than that furnished by the responsible party shall be used with the device.

#### 2. SUMMARY OF TEST RESULTS

2.1. Test procedures according to the technical standards:
FCC KDB680106 D01 RF Exposure Wireless Charging Apps v03r01

|  | - 1/ 37      | -4117                   | - (/)    | -4114       |
|--|--------------|-------------------------|----------|-------------|
|  |              | FCC CFR 47              |          |             |
| Standard<br>Section                    |              | Test Item               | Judgment | Remark      |
| FCC CFR 47 part1,                      | Electric Fig | eld Strength (E) (V/m)  | PASS     | MAK TESTING |
| 1.1310 KDB680106 -<br>D01v03r01 (3)(3) | Magnetic F   | ield Strength (H) (A/m) | PASS     | LAY TESTINE |

#### 2.2. Measurement Uncertainty

The reported uncertainty of measurement  $\mathbf{y} \pm \mathbf{U}$ , where expended uncertainty  $\mathbf{U}$  is based on a standard uncertainty multiplied by a coverage factor of  $\mathbf{k=2}$ , providing a level of confidence of approximately  $\mathbf{95}$  %.

| KTED  | No.           | Item was a                                | Uncertainty |
|-------|---------------|---|-------------|
|       | 1             | All emissions, radiated(<30M)(9KHz-30MHz) | ±3.90dB     |
| STING | 2 Temperature |   | ±0.5°C      |
|       | 3             | Humidity                                  | ±2%         |

### 2.3. Test Mode

| EUT Mode | - WAY TESTING  | Description  |  |  |  |  |

| 1500-100,000             | NK TESTING                           |                                      | OK TET THE                     | 30   |

Note 1: f = frequency in MHz; \*Plane-wave equivalent power density.

Note 2: For the applicable limit, see FCC 1.1310, 680106 D01 RF Exposure Wireless Charging Apps v03r01.

Note 3: Emissions between 100 kHz to 300 kHz should be assessed versus the limits at 300 kHz in Table 1 of Section 1.1310: 614 V/m and 1.63A/m. A KDB inquiry is required to determine the applicable exposure limits below 100 kHz.

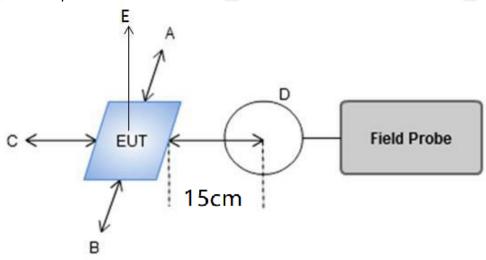

#### 4. TEST PROCEDURE

a. For devices designed for typical desktop applications, such a wireless charging pads, RF exposure evaluation should be conducted assuming a user separation distance of (H-field & E- field strengths for all sides is 15cm, H-field strengths of top side is 20cm).

E and H field strength measurements or numerical modeling may be used to demonstrate compliance. Measurements should be made from all sides and the top of the primary/client pair, with the 15 cm measured from the center of the probe(s) to the edge of the device.

#### 4.1 Test Setup

4.2 Result Of Maximum Permissible Exposure

All test modes are tested, and the report shows only the worst mode: ANT1+ANT2+ANT3

For Full load mode:

H-Field Strength at 15 cm (E top side: 20cm) from the edges surrounding the EUT (A/m)

| Field<br>strength | Test<br>Position<br>A | Test<br>Position<br>B | Test<br>Position<br>C | Test<br>Position<br>D | Test<br>Position<br>E | Limits<br>(A/m) |
|-------------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------|
| <sup>©</sup> uT   | 0.456                 | 0.339                 | 0.521                 | 0.465                 | 0.522                 | TING            |
| A/m               | 0.365                 | 0.271                 | 0.417                 | 0.372                 | 0.418                 | 1.63            |

Note.

Calculation: A/m=uT/1.25

For Half Load mode:

H-Field Strength at 15 cm (E top side: 20cm) from the edges surrounding the EUT (A/m)

| Field<br>strength | Test<br>Position<br>A | Test<br>Position<br>B | Test<br>Position<br>C | Test<br>Position<br>D | Test<br>Position<br>E | Limits<br>(A/m) |
|-------------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------|
| √ uT              | 0.420                 | 0.358                 | 0.611                 | 0.338                 | 0.425                 | NG /            |
| A/m               | 0.336                 | 0.286                 | 0.489                 | 0.270                 | 0.340                 | 1.63            |

Note.

Calculation: A/m=uT/1.25

For No load mode:

H-Field Strength at 15 cm (E top side: 20cm) from the edges surrounding the EUT (A/m)

| Field<br>strength | Test<br>Position<br>A | Test<br>Position<br>B | Test<br>Position<br>C | Test<br>Position<br>D | Test<br>Position<br>E | Limits<br>(A/m) |

| uT                | 0.484                 | 0.332                 | 0.361                 | 0.424                 | 0.545                 | 1               |
| A/m               | 0.387                 | 0.266                 | 0.289                 | 0.339                 | 0.436                 | 1.63            |

Note.

Calculation: A/m=uT/1.25

The results shown in this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by HUAK, this document cannont be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.cer-mark.com

TEL: +86-755 2302 9901 FAX: +86-755 2302 9901 E-mail: service@cer-mark.com

Remark: According KDB 680106 D01 RF Exposure Wireless Charging App v03r01, section 5, b). The aggregate H-field strengths at 15 cm surrounding the device and 20 cm above the top surface from all simultaneous transmitting coils are demonstrated to be less than 50% of the MPE limit. The E- field evaluation conducted assuming a user separation distance of 15 cm according to the KDB 680106 D01 RF Exposure Wireless Charging App v03r01 section 3, c).

Result: The device comply with the RF exposure requirement according to 680106 D01 v03r01, section 5, b):

- (1) Power transfer frequency is less than 1 MHz.
- -The device operate in the frequency range for 111.5KHz~205KHz
  - (2) Output power from each primary coil is less than or equal to 15 watts.
    - The maximum output power of cell phone is 15W
    - The maximum output power of watch is 2.5W
    - The maximum output power of headphone is 3W
  - (3) The system may consist of more than one source primary coils, charging one or more clients. If more than one primary coil is present, the coil pairs can be powered on at the same time
- The transfer system including a charging system with three primary coils, the coil pairs can be powered on at the same time.
  - (4) Client device is placed directly in contact with the transmitter
- -The EUT is placed directly in contact with the transmitter
  - (5) Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion).
- Yes, mobile device only.
- (6) The aggregate H-field strengths anywhere at or beyond 15 cm surrounding the device, and 20 cm away from the surface from all coils that by design can simultaneously transmit, and while those coils are simultaneously energized, are demonstrated to be less than 50% of the applicable MPE limit.
  - The EUT meet the conditions.
