### FAQ

1.The Indicator light changed from flashing to regular, but it still fails to connect? It may have flickered for more than three minutes, and you can still connect to the device through APP.

If the "normal mode" method cannot add your device, you can use "AP mode" to add it. If you are using iOS 14 and above, please make sure you have opened the local network permission and wireless data permission of the App.

2.My network is fast and stable, but when using the App to control the device, the device latency is always high?

Please make sure that the signal of the network environment where the device is located is strong and stable. Troubleshooting: Download the Internet Speed Test App, place your mobile phone in the same location as the device, and then test the Internet upload and download speed at that location (ensure that the speed is at least: upload  $\geq 2$  MB/s, download  $\geq 2$  MB/s or upload  $\geq 16$  Mbps, download  $\geq 16$  Mbps).

The region where you live now is not the same as the region you selected when you registered your App account. As a result, the cloud server you access when controlling your device is far away from your place of residence, resulting in high latency.

Our cloud server is not able to cover the area where you live, causing high latency between the cloud server you need to access and your device.

3.Why does the device not automatically reconnect with the mobile phone after it is powered on again?

Dear user, first, make sure that your controller is powered on.

Because of some technical problems, you can go back to the home page of the APP and slide the interface to refresh, and then you can see that the device has been reconnected.

**FCC Warning Statement: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:**

- **Reorient or relocate the receiving antenna.**
- **Increase the separation between the equipment and receiver.**
- **Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.**
- **Consult the dealer or an experienced radio/TV technician for help.**

**This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.**

#### **FCC Radiation Exposure Statement**

**The antennas used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co - located for operating in conjunction with any other antenna or transmitter.**
