

Dear UL TCB

We are submitting an application for certification of a drone to cover the cellular modem. The digital device and receiver approvals will be covered using the SDoC procedures.

The drone will also include three certified transmitter modules, a WLAN module (FCC ID 2A46G-WM101) and two mmWave modules operating under FCC 15.249 (FCC IDs 2A46G-RD2426 and 2A46G-TR24S100). This certification addresses colocation with the WLAN module; colocation of the mmWave modules is being addressed as part of the module integration verification tests.

Best regards,

---
