

TEST REPORT

Applicant Name: Shine Flex US LLC

Address: 1259 Knollwood Road Deerfield IL 60015 USA

Report Number: RA221202-58690E-RF-00

FCC ID: 2A4DDLPXEEJ

Test Standard (s)

FCC PART 95

Sample Description

Product Type: Two-way Radio

Model No.: LPX550
Multiple Model(s) No.: N/A
Trade Mark: Bushnell
Date Received: 2022/12/02
Report Date: 2023/01/03

Test Result: Pass*

| Factory 2 Name | Clearmoon Electronics (YunFu) Limited |
| Factory 2 Address | Building A, Part one of B2-02, Xincheng Industrial Park, Xincheng Town, XinXing County, YunFu City, Guangdong, P.R.C |

Report No.: RA221202-58690E-RF-00

Objective

This test report is in accordance with Part 2 and Part 95, Subpart A & Subpart B of the Federal Communication Commissions rules.

Test Methodology

All tests and measurements indicated in this document were performed in accordance with Part 95 Subpart A, Subpart B of the Federal Communication Commissions rules with TIA-603-E, Land Mobile FM or PM-Communications Equipment-Measurement and Performance Standards and ANSI C63.26-2015American National Standard for Compliance Testing of Transmitters Used in Licensed Radio Services.

All emissions measurement was performed at Shenzhen Accurate Technology Co., Ltd. The radiated testing was performed at an antenna-to-EUT distance of 3 meters.

Each test item follows test standards and with no deviation.

Version 26: 2021-11-09 Page 3 of 30 FCC- RF

Measurement Uncertainty

| Parameter | | Uncertainty | |
|--------------|-------------------|-------------|--|
| Occupied Cha | annel Bandwidth | 5% | |
| RF output po | ower, conducted | 0.73dB | |
| Unwanted Em | ission, conducted | 1.6dB | |
| Emissions, | 30MHz - 1GHz | 4.28dB | |
| Radiated | 1GHz - 18GHz | 4.98dB | |
| Temp | perature | 1°C | |
| Humidity | | 6% | |
| Supply | voltages | 0.4% | |

Report No.: RA221202-58690E-RF-00

Note: The extended uncertainty given in this report is obtained by combining the standard uncertainty times the coverage factor K with the 95% confidence interval. Otherwise required by the applicant or Product Regulations, Decision Rule in this report did not consider the uncertainty.

Test Facility

The test site used by Shenzhen Accurate Technology Co., Ltd. to collect test data is located on the 1/F., Building A, Changyuan New Material Port, Science & Industry Park, Nanshan District, Shenzhen, Guangdong, P.R. China.

The test site has been approved by the FCC under the KDB 974614 D01 and is listed in the FCC Public Access Link (PAL) database, FCC Registration No.: 708358, the FCC Designation No.: CN1189. Accredited by American Association for Laboratory Accreditation (A2LA) The Certificate Number is 429 7.01.

Listed by Innovation, Science and Economic Development Canada (ISEDC), the Registration Number is 5077A.

Version 26: 2021-11-09 Page 4 of 30 FCC- RF

SYSTEM TEST CONFIGURATION

Description of Test Configuration

The system was configured for testing in a typical fashion (as normally used by a typical user).

Channel List

Report No.: RA221202-58690E-RF-00

| Channel No. | Channel Frequency (MHz) | Channel No. | Channel Frequency (MHz) |
|-------------|----------------------------|-------------|----------------------------|
| 1 | 462.5625 | 12 | 467.6625 |

Version 26: 2021-11-09 Page 8 of 30 FCC- RF

^{*} Statement of Traceability: Shenzhen Accurate Technology Co., Ltd. attests that all calibrations have been performed in accordance to requirements that traceable to National Primary Standards and International System of Units (SI).

§2.1093 - RF EXPOSURE INFORMATION

Report No.: RA221202-58690E-RF-00

Applicable Standard

§2.1093.

Test Result

Compliance, please refer to the SAR report: CR221258688-20A.

Version 26: 2021-11-09 Page 9 of 30 FCC- RF

FCC §2.1046 & §95.567 - RF OUTPUT POWER

Applicable Standard

Per FCC §2.1046, and §95.567, Each FRS transmitter type must be designed such that the effective radiated power (ERP) on channels 8 through 14 does not exceed 0.5 Watts and the ERP on channels 1 through 7 and 15 through 22 does not exceed 2.0 Watts.

Report No.: RA221202-58690E-RF-00

Test Procedure

The transmitter was placed on a wooden turntable, and it was transmitting into a non-radiating load, which was also placed on the turntable.

The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The test was performed by placing the EUT on 3-orthogonal axis.

Remove the EUT and replace it with substitution antenna. A signal generator was connected to the substitution antenna by a non-radiating cable. The absolute levels of the emissions were measured by the substitution.

Test Data

Environmental Conditions

| Temperature: | 26 °C |
|--------------------|-----------|
| Relative Humidity: | 51 % |
| ATM Pressure: | 101.0 kPa |

The testing was performed by Joson Liu on 2022-12-13.

Test Mode: Transmitting

| Frequency (MHz) | Reading | _ | Rx Antenna | | Substituted | Absolute | | |
|------------------------|---------|-----|------------|----------------|-------------|-------------|----------------|----------------|
| | | | Height (m) | Polar (H/V) | Factor (dB) | Level (dBm) | Limit (dBm) | Margin (dB) |
| Channel 4, 462.6375MHz | | | | | | | | |
| 462.6375 | 1.92 | 280 | 2 | Н | 9.1 | 11.02 | 33 | -21.98 |
| 462.6375 | 26.52 | 148 | 1.1 | V | 5 | 31.52 | 33 | -1.48 |
| | | | Channel 1 | 1, 467.63 | 75MHz | | | |
| 467.6375 | -8.38 | 26 | 1.6 | Н | 8.3 | -0.08 | 27 | -27.08 |
| 467.6375 | 20.32 | 323 | 1.8 | V | 5.4 | 25.72 | 27 | -1.28 |

Note

Absolute Level = Reading Level + Substituted Factor

Substituted Factor contains: SG Level - Cable loss+ Antenna Gain

Margin = Absolute Level - Limit

Test Result: Compliant.

Version 26: 2021-11-09 Page 10 of 30 FCC- RF

FCC §2.1047 & §95.575 - MODULATION CHARACTERISTIC

Applicable Standard

Per FCC §2.1047 and §95.575: Each FRS transmitter type must be designed such that the peak frequency deviation does not exceed 2.5 kHz, and the highest audio frequency contributing substantially to modulation must not exceed 3.125 kHz.

Report No.: RA221202-58690E-RF-00

Test Procedure

FCC $\S 2.1049 \& \S 95.573 \& \S 95.579$ - AUTHOURIZED BANDWIDTH AND EMISSION MASK

Report No.: RA221202-58690E-RF-00

Applicable Standard

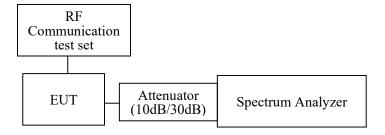

According to §95.573. Each FRS transmitter type must be designed such that the occupied bandwidth does not exceed 12.5 kHz.

Each FRS transmitter type must be designed to satisfy the applicable unwanted emissions limits in this paragraph.

- (a) Attenuation requirements. The power of unwanted emissions must be attenuated below the carrier power output in Watts (P) by at least:
- (1) 25 dB (decibels) in the frequency band 6.25 kHz to 12.5 kHz removed from the channel center frequency.
- (2) 35 dB in the frequency band 12.5 kHz to 31.25 kHz removed from the channel center frequency.
- (3) $43 + 10 \log (P) dB$ in any frequency band removed from the channel center frequency by more than 31.25 kHz.
- (b) Measurement bandwidths. The power of unwanted emissions in the frequency bands specified in paragraphs (a)(1) and (2) of this section is measured with a reference bandwidth of 300 Hz. The power of unwanted emissions in the frequency range specified in paragraph (a)(3) is measured with a reference bandwidth of at least 30 kHz.

Test Procedure

TIA-603-E, section 2.2.11

FCC §2.1053 & §95.579- RADIATED SPURIOUS EMISSION

Applicable Standard

FCC §2.1053 and §95.579. Each FRS transmitter type must be designed to satisfy the applicable unwanted emissions limits in this paragraph.

Report No.: RA221202-58690E-RF-00

- (a) Attenuation requirements. The power of unwanted emissions must be attenuated below the carrier power output in Watts (P) by at least:
- (1) 25 dB (decibels) in the frequency band 6.25 kHz to 12.5 kHz removed from the channel center frequency.
- (2) 35 dB in the frequency band 12.5 kHz to 31.25 kHz removed from the channel center frequency.
- (3) $43 + 10 \log (P) dB$ in any frequency band removed from the channel center frequency by more than 31.25 kHz.
- (b) Measurement bandwidths. The power of unwanted emissions in the frequency bands specified in paragraphs (a)(1) and (2) of this section is measured with a reference bandwidth of 300 Hz. The power of unwanted emissions in the frequency range specified in paragraph (a)(3) is measured with a reference bandwidth of at least 30 kHz.
- (c) *Measurement conditions*. The requirements in this section apply to each FRS transmitter type both with and without the connection of permitted attachments, such as an external speaker, microphone and/or power cord.

Test Procedure

The transmitter was placed on a wooden turntable.

The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The test was performed by placing the EUT on 3-orthogonal axis.

The frequency range up to tenth harmonic of the fundamental frequency was investigated.

Remove the EUT and replace it with substitution antenna. A signal generator was connected to the substitution antenna by a non-radiating cable. The absolute levels of the spurious emissions were measured by the substitution.

Spurious emissions in dB = 10 1g (TXpwr in Watts/0.001)-the absolute level Spurious attenuation limit in dB = $43+10 Log_{10}$ (power out in Watts)

Report No.: RA221202-58690E-RF-00

Note:

Absolute Level = Reading Level + Substituted Factor

Substituted Factor contains: SG Level - Cable loss+ Antenna Gain

Margin = Absolute Level - Limit

Version 26: 2021-11-09 Page 27 of 30 FCC- RF

FCC§2.1055 (d) & §95.565 - FREQUENCY STABILITY

Applicable Standard

According to FCC §2.1055(a) (2), the frequency stability shall be measured with variation of ambient temperature from –20 °C to +50 °C, and according to FCC 2.1055(d) (2), the frequency stability shall be measured with reducing primary supply voltage to the battery operating end point which is specified by the manufacturer.

Report No.: RA221202-58690E-RF-00

According to FCC $\S95.565$, Each FRS transmitter type must be designed such that the carrier frequencies remain within ± 2.5 parts-per-million of the channel center frequencies specified in $\S95.563$ during normal operating conditions.

Test Procedure

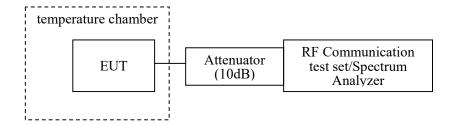

Frequency Stability vs. Temperature: The equipment under test was connected to an external DC power supply and the RF output was connected to a Frequency Counter via feed-through attenuators. The EUT was placed inside the temperature chamber. The DC leads and RF output cable exited the chamber through an opening made for the purpose.

After the temperature stabilized for approximately 20 minutes, the frequency output was recorded from the Frequency Counter.

Frequency Stability vs. Voltage (item 1 or item 2 will be chosen according to different condition):

- □1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.
- \boxtimes 2) For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point which shall be specified by the manufacturer.

The output frequency was recorded for each voltage.

§95.587 – FRS ADDITIONAL REQUIREMENTS

Applicable Standard

According to FCC §95.587

Each FRS transmitter type must be designed to meet the following additional requirements.

- (a) Transmit frequency capability. FRS transmitter types must not be capable of transmitting on any frequency or channel other than those listed in § 95.563.
- (b) Antenna. The antenna of each FRS transmitter type must meet the following requirements.
 - (1) The antenna must be a non-removable integral part of the FRS transmitter type.
 - (2) The gain of the antenna must not exceed that of a half-wave dipole antenna.
 - (3) The antenna must be designed such that the electric field of the emitted waves is vertically polarized when the unit is operated in the normal orientation.

Report No.: RA221202-58690E-RF-00

- (c) Digital data transmissions. FRS transmitter types having the capability to transmit digital data must be designed to meet the following requirements.
 - (1) FRS units may transmit digital data containing location information, or requesting location information from one or more other FRS or GMRS units, or containing a brief text message to another specific FRS or GMRS unit or units.
 - (2) Digital data transmissions may be initiated by a manual action or command of the operator or on an automatic or periodic basis, and FRS units may be designed to automatically respond with location data upon receiving an interrogation request from another
 - (3) Digital data transmissions must not exceed one second in duration.
 - (4) Digital data transmissions must not be sent more frequently than one digital data transmission within a thirty-second period, except that an FRS unit may automatically respond to more than one interrogation request received within a thirty-second period.
- (d) Packet mode. FRS transmitter types must not be capable of transmitting data in the store-and-forward packet operation mode.
- (e) Effective September 30, 2019, no person shall manufacture or import hand-held portable radio equipment capable of operating under this subpart (FRS) and other licensed or licensed-by-rule services in this chapter (part 15 unlicensed equipment authorizations are permitted if consistent with part 15 rules).

Result

- (a) Compliant, please refer to the channel list.
- (b) Compliant, EUT has an non-removable integral vertically ploarized antenna arrangement and the antenna gain is -2.15dBi(-4.3dBd), fulfill the requirement of this section. Please refer to the EUT photos.
- (c) Not Applicant, EUT not support this function, please refer to user manual.
- (d) Not Applicant, EUT not support this function, please refer to user manual.
- (e) Compliant, EUT only with FRS function operating under FCC part 95B, not support other function, please refer to user manual.
