2 Test Summary

| Test Item | Test Requirement | Test method | Result PASS | |
|---|---|------------------|--------------------|--|
| Antenna Requirement | 47 CFR Part 15 Subpart C Section 15.203 | ANSI C63.10:2013 | | |
| AC Power Line Conducted Emission | 47 CFR Part 15 Subpart C Section 15.207 | ANSI C63.10:2013 | N/A PASS | |
| Field Strength of the Fundamental Signal | 47 CFR Part 15 Subpart C Section 15.231 (b) | ANSI C63.10:2013 | | |
| Spurious Emissions | 47 CFR Part 15 Subpart C Section 15.231 (b)/15.209 | ANSI C63.10:2013 | PASS | |
| 20dB Bandwidth | 47 CFR Part 15 Subpart C Section 15.231 (c) | ANSI C63.10:2013 | PASS | |
| Dwell Time | 47 CFR Part 15 Subpart C Section 15.231 (a) | ANSI C63.10:2013 | PASS | |

Remark:

- 1.N/A:The product is powered by DC3.0V Battery.
- 2.Company Name and Address shown on Report, the sample(s) and sample Information were provided by the applicant who should be responsible for the authenticity which CTI hasn't verified.
- 3.Model No.:D0-62, D1-62

Only the model D0-62 was tested, since the electrical circuit design, layout, components used and internal wiring were identical for the above models, with difference being appearance and model name.

Test results and Measurement Data 6

6.1 Antenna Requirement

Standard requirement:

47 CFR Part 15C Section 15.203

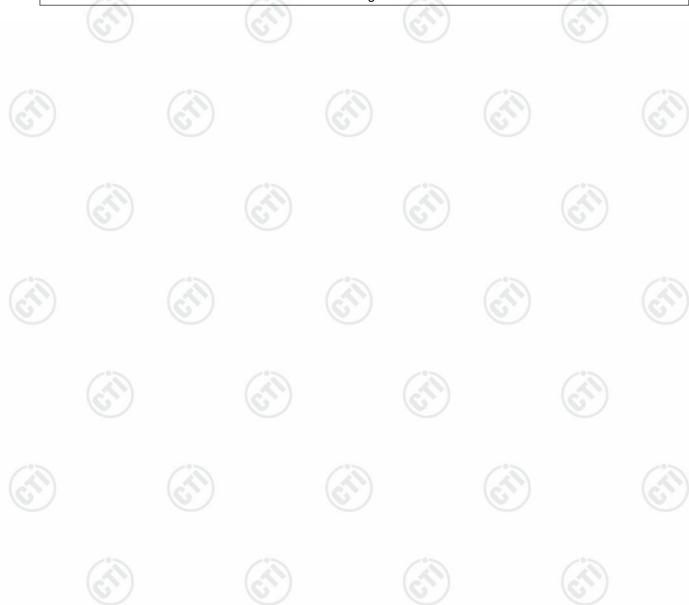

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

EUT Antenna:

Please see Internal photos

The antenna is Internal antenna. The best case gain of the antenna is -18dBi.

Report No.: EED32N81413501 Page 11 of 32

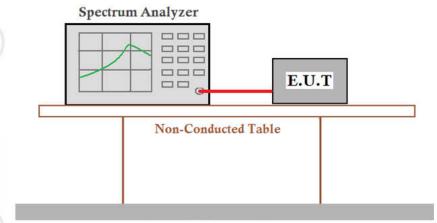

6.2 Spurious Emissions

6.2.1 Duty Cycle

Test Setup:

Test Requirement: 47 CFR Part 15C Section 15.35 (c)

Test Method: ANSI C63.10:2013

Ground Reference Plane

Limit: N/A

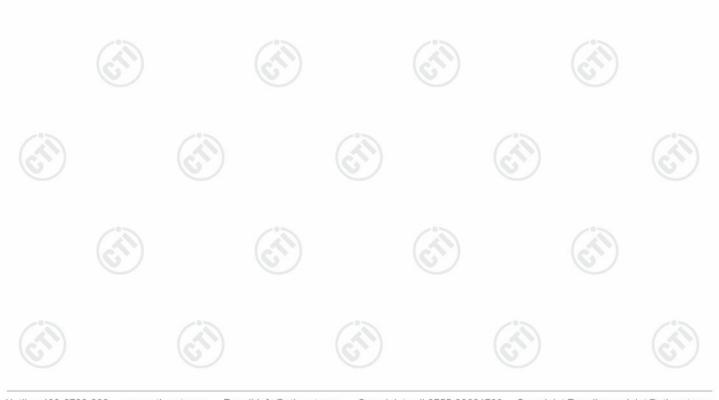

Test Mode: Transmitting mode

Test Results: Pass

| T period | T on time | Duty cycle |

Receiver Setup:

Test Setup:

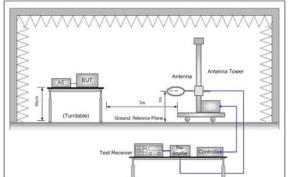

Figure 1. Below 30MHz

Figure 2. 30MHz to 1GHz

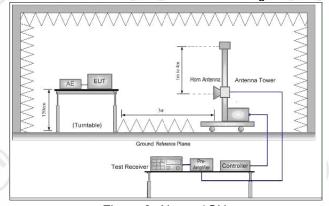

Figure 3. Above 1GHz

Page 13 of 32

Below 1GHz test procedure as below:

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.
- The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be retested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

Above 1GHz test procedure as below:

- g. Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber and change form table 0.8 metre to 1.5 metre(Above 18GHz the distance is 1 meter and table is 1.5 metre).
- Test the EUT in the only channel.
- The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is worse case.
- Repeat above procedures until all frequencies measured was complete.

| Frequency | Field strength (microvolt/meter) | Limit (dBµV/m) | Remark | distance (m) |
|-------------------|----------------------------------|-------------------|------------|--------------|
| 0.009MHz-0.490MHz | 2400/F(kHz) | - | - | 300 |
| 0.490MHz-1.705MHz | 24000/F(kHz) | - (2 | - | 30 |
| 1.705MHz-30MHz | 30 | - (6) | ·) - | 30 |
| 30MHz-88MHz | 100 | 40.0 | Quasi-peak | 3 |
| 88MHz-216MHz | 150 | 43.5 | Quasi-peak | 3 |
| 216MHz-960MHz | 200 | 46.0 | Quasi-peak | 3 |
| 960MHz-1GHz | 500 | 54.0 | Quasi-peak | 3 |
| Above 1GHz | 500 | 54.0 | Average | 3 |

Note: 15.35(b), Unless otherwise specified, the limit on peak radio frequency emissions is 20dB above the maximum permitted average emission limit applicable to the equipment under test. This peak limit applies to the total peak emission level radiated by the device.

| Frequency | Limit (dBµV/m @3m) | Remark | |
|-----------|--------------------|---------------|--|
| 422 COMU- | 80.8 | Average Value | |
| 433.62MHz | 100.8 | Peak Value | |

Limit:

Limit: (Spurious **Emissions**)

Remark:

- 1) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:
 - Final Test Level =Receiver Reading Correct Factor
 - Correct Factor = Preamplifier Factor Antenna Factor Cable Factor
- 2) Scan from 9kHz to 6GHz, the disturbance below 30MHz was very low, and the above harmonics were the highest point could be found when testing, so only the above harmonics had been displayed. The amplitude of spurious emissions from the radiator which are attenuated more than 20dB below the limit need not be reported.
- The one with the * is the harmonic of 433.62MHz, and its limit is 60.83dBµV/m.

6.3 20dB Bandwidth

Test Requirement: tion 15.231 (c)

Test Method:

Ground Reference Plane

Test Setup:

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated

carrier.

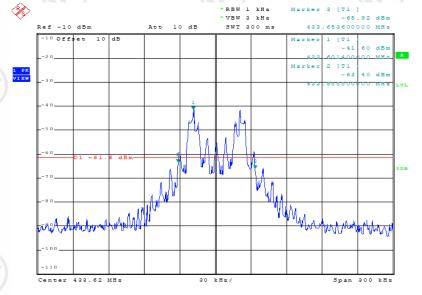

Test Mode: Transmitting mode

Test Results: Pass

Test data

| 20dB bandwidth (MHz) | Limit (MHz) | Results |
|----------------------|-------------|---------|
| 0.0648 | 1.08405 | PASS |

Test plot as follows:

6.4 Dwell Time

Test Requirement: 47 CFR Part 15C Section 15.231 (a)

Test Method: ANSI C63.10:2013

Ground Reference Plane

Limit: Not more than 5 seconds

Test Mode: Transmitting mode

Test Results: Pass

Requirements:

Test Setup:

1. Regulation 15.231 (a) The provisions of this Section are restricted to periodic operation within the band 40.66~40.70 MHz and above 70 MHz. Except as shown in paragraph (e) of this Section, the intentional radiator is restricted to the transmission of a control signal such as those used with alarm systems, door openers, remote switches, etc. Radio control of toys is not permitted. Continuous transmissions, such as voice or video, and data transmissions are not permitted. The prohibition against data transmissions does not preclude the use of recognition codes. Those codes are used to identify the sensor that is activated or to identify the particular component as being part of the system.

Result:

The EUT is a remote switch without audio or video transmitted.

The EUT meets the requirements of this section.

2. Regulation 15.231 (a1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.

Result:

| 0 | Test item | Limit (S) | Results (S) |
|---|-------------------|------------|-------------|
| | Transmitting time | ≤ 5 | 4.7400 |

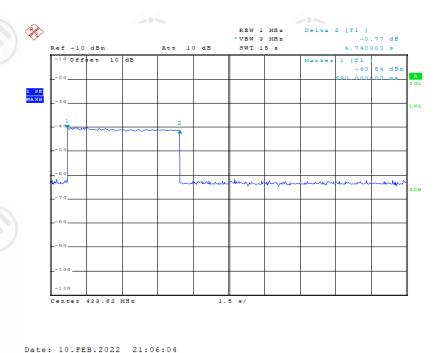

Page 20 of 32

Page 21 of 32

Test plot as follows:

3. Regulation 15.231 (a2) A transmitter activated automatically shall cease transmission within 5 seconds after activation.

Result:

The EUT does not have automatic transmission.

4. Regulation15.231 (a3) Periodic transmissions at regular predetermined intervals are not permitted. However, polling or supervision transmissions to determine system integrity of transmitters used in security or safety applications are allowed if the periodic rate of transmission does not exceed one transmission of not more than one second duration per hour for each transmitter.

Result:

The EUT does not employ periodic transmission.

5. Regulation 15.231 (a4) Intentional radiators which are employed for radio control purposes during emergencies involving fire, security, and safety of life, when activated to signal an alarm, may operate during the pendency of the alarm condition.

Result:

This section is not applicable to the EUT.
