Product : Antenna

Trade mark : FinDreams
Model/Type reference : \$6-3642400

Serial Number : N/A

 Report Number
 : EED32O81296001

 FCC ID
 : 2A5DHS6-3642400

Date of Issue : Jun. 08, 2023

Test Standards : 47 CFR Part 15 Subpart C

Test result : PASS

#### 6 Test results and Measurement Data

#### 6.1 Antenna Requirement

| Standard requirement: | 47 CFR Part 15C Section 15.203 |
|-----------------------|--------------------------------|
|-----------------------|--------------------------------|

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

**EUT Antenna**: Please see Internal photos

The antenna is Internal antenna. The best case gain of the antenna is -16dBi.

### **Radiated Spurious Emissions**

Test Requirement: 47 CFR Part 15C Section 15.231(b) and 15.209

**Test Method:** ANSI C63.10 2013

**Test Site:** Measurement Distance: 3m (Semi-Anechoic Chamber)

# Test Setup:

**Receiver Setup:** 

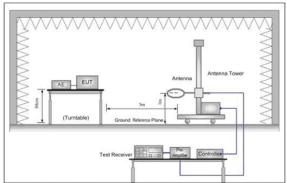

Figure 1. Below 30MHz

Figure 2. 30MHz to 1GHz

#### **Test Procedure:**

#### Below 1GHz test procedure as below:

- The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rota table table was turned from 0 degrees to 360 degrees to find the maximum reading.
- The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be retested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

#### Remark:

- 1. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is the worst case.
- 2. The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows: Final Test Level =Receiver Reading - Correct Factor
  - Correct Factor = Preamplifier Factor Antenna Factor Cable Factor
- The highest frequency is 125kHz of the EUT, so upper frequency of measurement range is 30MHz.

#### 6.3 20dB Bandwidth

Limit:

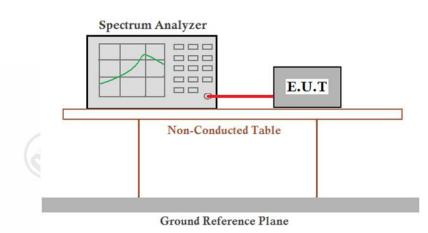

**Test Setup:** 

Test Requirement: 47 CFR Part 15C Section 2.1049

Test Method: ANSI C63.10 2013

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency.

Bandwidth is determined at the points 20 dB down from the modulated carrier.

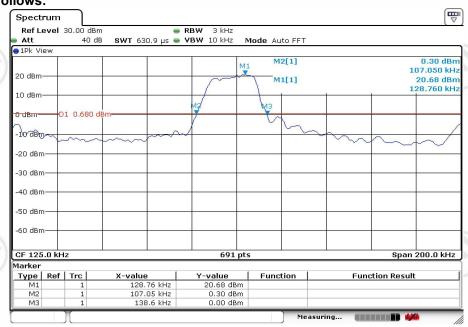

Test Mode: Transmitting mode

Test Results: Pass

#### **Measurement Data**
