PART NAME

USAGE METHOD

The following three operation methods are available (any operation method can be used)

Method 1

1. Insert the U disk in the package into the computer, select the driver corresponding to the system and install it (win10 64/32bit driver).

- 02 -

2. Insert the wireless receiver into the USB interface of the PC (support USB2.0/3.0);

The method of confirming the driver has been installed on the PC: Right click - Manage - Device Manager.

If this icon is displayed, as the picture show, the driver has been successfully installed and it can be used normally.

NOTE:

1. The wireless receiver only support WIN10 system, it cannot be used on WIN7/8 system.
2. After the receiver is plugged into the device, wait for about 3 seconds (device identification), and then press the pairing button, otherwise the lights may flash randomly or the controller cannot be connected.
3. After installing the battery into the controller, press and hold the pairing button on the receiver for about 2 seconds and then the

- 03 -

green light flashes. Turn on the power button of the XBOX ONE wireless controller and press and hold the top pairing button for 2 seconds. The white light on the controller starts to flash quickly. After the pair is successful, the white light on the controller is on and the green light on the wireless receiver is on. You can play games on the device.

NOTE:

The controller will automatically shut down if there is no operation for about 15 minutes, the connection will be disconnected and the green light of the wireless receiver will go out. The connected controller only need to turn on the controller power button 2 seconds to automatically pair and connect.

Method 2

1. Insert the wireless receiver into the USB interface of the PC (support USB2.0/3.0); And wait for the automatic search and installation of the driver.

- 04 -

If the automatic installation is successful, it means that the controller can be connected and used normally; If the installation is not successful, please follow the steps below.

2. Select "This PC", right click - Manage - Services - Windows Update - Startup type choose "Automatic" - Apply - click "OK".

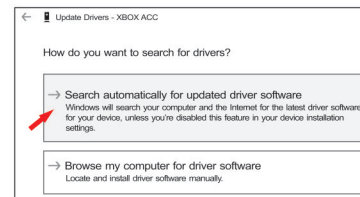

- 05 -

3. Select "This PC", right click - Manage - Device Manager - XBOX ACC (there's an exclamation icon), right click - choose "Update driver" - Search automatically for updated driver software - Then it will appear "Windows has successfully updated your drivers" - Then the updating is successful.

- 06 -

4. Connect XBOX One wireless controller, (Same as step 3 of method 1).

- 07 -

Method 3

1. Insert the wireless receiver into the USB interface of the PC (support USB2.0/3.0);

2. Download the driver from the official website.

1. Open the browser and enter

<https://www.yccteam.com/pages/download>

2. Click "5.Wireless adapter driver for The X-One controller for win10" Download and install the driver.

WIN10 64/32 bit driver xbox_wireless_104 61_x64_1012 / microsoft_xboxwl_213423 7_32_16

3. Connect XBOX One wireless controller, (Same as step 3 of method 1)

- 08 -

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction
