FCC RF Exposure

EUT Description: Game console handle Wireless Controller Model No.: PGMC3WPS4(B09MSPR8LL) FCC ID: 2A5UW-PGMC3WPS4

1. Limits

According to KDB 447498 D04 General RF Exposure Guidance v01 The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤50 mm are determined by:

[(max power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)]·[$\sqrt{f}(GHz)$]≤3.0 for 1-g SAR and ≤ 7.5 for 10-g extremity SAR,

Where:

Result=P/D*√F F= the RF channel transmit frequency in GHz P=Maximum turn-up power in mw D=Min. test separation distance in mm

2. Test Result of RF Exposure Evaluation

barati tance		Exclusion
1 5 0.618	3.0	Pass

Note:

PK Output power= conducted power.

Conducted power see the test report HK2207143056-E, antenna gain=-6.7dBi

Per KDB 447498 D04, when the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion. The test exclusion threshold is 0.618 which is<= 3, SAR testing is not required.

Note: Exclusion Thresholds Results=[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] $\cdot [\sqrt{f}_{(GHz)}]$

 $f_{\rm (GHz)}\, is$ the RF channel transmit frequency in GHz Distance=5mm
