# **FCC TEST REPORT FCC ID: 2A6CT-ET301**

Report Number.....: ZKT-220411L2328

Date of Test...... : Apr. 01, 2022 -- Apr. 13, 2022

Date of issue .....: Apr. 13, 2022

Total number of pages .....: 37

Test Result .....: PASS

Testing Laboratory.....: Shenzhen ZKT Technology Co., Ltd.

Applicant's name .....: Shenzhen Wanhe Innovation Technology Co., LTD

Address ...... Floor 2, Building D, no.2, Tengfeng 1st Road, Fenghuang Community, Fuyong Street, Bao 'an District, Shenzhen

Manufacturer's name .....: Shenzhen Wanhe Innovation Technology Co., LTD

Address ...... Floor 2, Building D, no.2, Tengfeng 1st Road, Fenghuang Community, Fuyong Street, Bao 'an District, Shenzhen

**Test specification:** 

Standard ..... FCC CFR Title 47 Part 15 Subpart C Section 15.247 ANSI C63.10:2013

Test procedure.....:: /

Non-standard test method .....: N/A

Test Report Form No. ....: TRF-EL-110\_V0

Test Report Form(s) Originator ....: ZKT Testing

Master TRF .....: Dated: 2020-01-06

This device described above has been tested by ZKT, and the test results show that the equipment under test (EUT) is in compliance with the FCC requirements. And it is applicable only to the tested sample identified in the report.

This report shall not be reproduced except in full, without the written approval of ZKT, this document may be altered or revised by ZKT, personal only, and shall be noted in the revision of the document.

Product name .....: hygrothermograph

Trademark .....: ERICKHILL

Model/Type reference .....: ET-301, ET-301B

Ratings.....: DC 3.0V from battery

Project No.: ZKT-220411L2328 Page 2 of 37

| 6           | 2412                                | 16          | 2432      | 26          | 2452      | 36          | 2472      |
| 7           | 2414                                | 17          | 2434      | 27          | 2454      | 37          | 2474      |
| 8           | 2416                                | 18          | 2436      | 28          | 2456      | 38          | 2476      |
| 9           | 2418                                | 19          | 2438      | 29          | 2458      | 39          | 2478      |
| 10          | 2420                                | 20          | 2440      | 30          | 2460      | 40          | 2480      |

Note: In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

| Test channel        | Frequency |
|---------------------|-----------|
| The lowest channel  | 2402MHz   |
| The middle channel  | 2440MHz   |
| The Highest channel | 2480MHz   |

Project No.: ZKT-220411L2328 Page 9 of 37

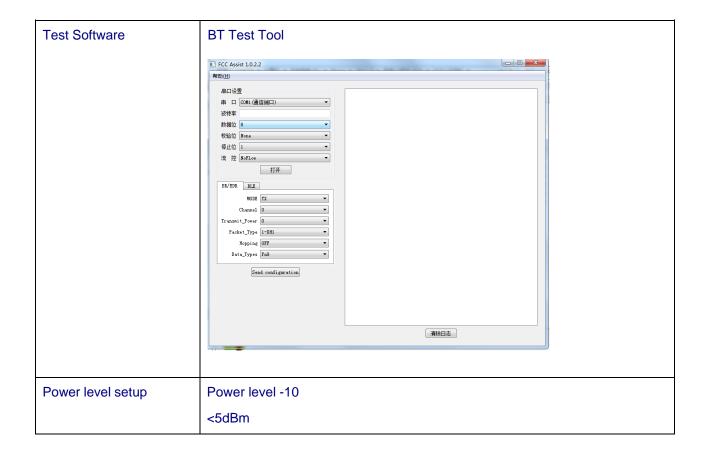

# 3.2 DESCRIPTION OF TEST MODES

Transmitting mode Keep the EUT in continuously transmitting mode

Remark: During the test, the duty cycle >98%, the test voltage was tuned from 85% to 115% of the nominal rated supply voltage, and found that the worst case was under the nominal rated supply condition. So the report just shows that condition's data.

We have verified the construction and function in typical operation. All the test modes were carried out with the EUT in transmitting operation, which was shown in this test report and defined as follows:

Pre-scan all kind of data rate in lowest channel, and found the follow list which it was worst case.

Page 10 of 37

# 3.4 DESCRIPTION OF SUPPORT UNITS(CONDUCTED MODE)

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| Item | Equipment | Mfr/Brand | Model/Type No. | Series No. | Note |
|------|-----------|-----------|----------------|------------|------|
|      |           |           |                |            |      |
|      |           |           |                |            |      |
|      |           |           |                |            |      |

| Item | Shielded Type | Ferrite Core | Length | Note |
|------|---------------|--------------|--------|------|
|      |               |              |        |      |
|      |               |              |        |      |
|      |               |              |        |      |

### Note:

- (1) The support equipment was authorized by Declaration of Confirmation.
- (2) For detachable type I/O cable should be specified the length in cm in <code>FLength\_a</code> column.

Project No.: ZKT-220411L2328 Page 11 of 37

#### 4. EMC EMISSION TEST

#### 4.1 CONDUCTED EMISSION MEASUREMENT

| Test Requirement:     | FCC Part15 C Section 15.207          |
|-----------------------|--------------------------------------|
| Test Method:          | ANSI C63.10:2013                     |
| Test Frequency Range: | 150KHz to 30MHz                      |
| Receiver setup:       | RBW=9KHz, VBW=30KHz, Sweep time=auto |

#### 4.1.1 POWER LINE CONDUCTED EMISSION Limits

| EDEOLIENCY (MH-) | Limit (    | Standard  |     |
|------------------|------------|-----------|-----|
| FREQUENCY (MHz)  | Quasi-peak |           |     |
| 0.15 -0.5        | 66 - 56 *  | 56 - 46 * | FCC |
| 0.50 -5.0        | 56.00      | 46.00     | FCC |
| 5.0 -30.0        | 60.00      | 50.00     | FCC |

Note:

(1) \*Decreases with the logarithm of the frequency.

#### 4.1.2 TEST PROCEDURE

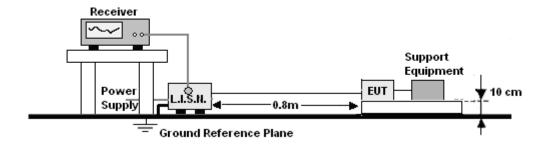

- a. The EUT was placed 0.1 meters from the horizontal ground plane with EUT being connected to the power mains through a line impedance stabilization network (LISN). All other support equipments powered from additional LISN(s). The LISN provide 50 Ohm/ 50uH of coupling impedance for the measuring instrument.
- b. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.
- c. I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- d. LISN at least 80 cm from nearest part of EUT chassis.
- e. For the actual test configuration, please refer to the related Item –EUT Test Photos.

# 4.1.3 DEVIATION FROM TEST STANDARD

No deviation

Project No.: ZKT-220411L2328 Page 13 of 37

# 4.1.4 TEST SETUP

# 4.1.5 EUT OPERATING CONDITIONS

The EUT was configured for testing in a typical fashion (as a customer would normally use it). The EUT has been programmed to continuously transmit during test. This operating condition was tested and used to collect the included data.

# 4.1.6 TEST RESULTS

#### N/A

(Not applicable as this device is dry battery powered)

Page 14 of 37

### 4.2 RADIATED EMISSION MEASUREMENT

| Test Requirement:     | FCC Part15 C Section 15.209 |            |        |        |            |  |  |  |

|                       | 150KHz-30MHz                | Quasi-peak | 9KHz   | 30KHz  | Quasi-peak |  |  |  |
|                       | 30MHz-1GHz                  | Quasi-peak | 120KHz | 300KHz | Quasi-peak |  |  |  |
|                       | Above 1GHz                  | Peak       | 1MHz   | 3MHz   | Peak       |  |  |  |
|                       | Above IGHZ                  | Peak       | 1MHz   | 10Hz   | Average    |  |  |  |

### 4.2.1 RADIATED EMISSION LIMITS

| Frequencies | Field Strength     | Measurement Distance |  |  |
|-------------|--------------------|----------------------|--|--|
| (MHz)       | (micorvolts/meter) | (meters)             |  |  |
| 0.009~0.490 | 2400/F(KHz)        | 300                  |  |  |
| 0.490~1.705 | 24000/F(KHz)       | 30                   |  |  |
| 1.705~30.0  | 30                 | 30                   |  |  |
| 30~88       | 100                | 3                    |  |  |
| 88~216      | 150                | 3                    |  |  |
| 216~960     | 200                | 3                    |  |  |
| Above 960   | 500                | 3                    |  |  |

### LIMITS OF RADIATED EMISSION MEASUREMENT

| FREQUENCY (MHz) | Limit (dBuV/m) (at 3M) |         |  |  |  |
|-----------------|------------------------|---------|--|--|--|
|                 | PEAK                   | AVERAGE |  |  |  |
| Above 1000      | 74                     | 54      |  |  |  |

#### Notes:

- (1) The limit for radiated test was performed according to FCC PART 15C.
- (2) The tighter limit applies at the band edges.
- (3) Emission level (dBuV/m)=20log Emission level (uV/m).

### **4.2.2 TEST PROCEDURE**

Below 1GHz test procedure as below:

- a. The EUT was placed on the top of a rotating table 0.1 meters above the ground at a 3 meter semi-anechoiccamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of avariable-height antenna tower.

Page 15 of 37

c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned toheights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could bestopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dBmargin would be re-tested one by one using peak, quasi-peak or average method as specified and then reportedin a data sheet.

Above 1GHz test procedure as below:

- g. Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber and table 0.8 metre to 1.5 metre (Above 18GHz the distance is 1 meter and table is 1.5 metre).
- h. Test the EUT in the lowest channel ,the middle channel ,the Highest channel

Note:

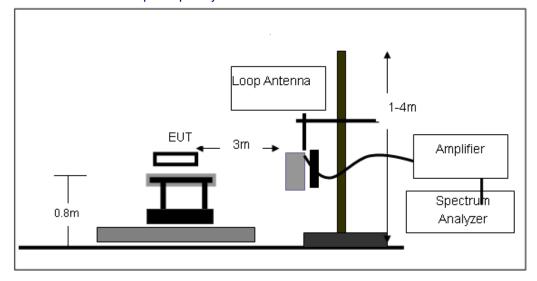

Both horizontal and vertical antenna polarities were tested and performed pretest to three orthogonal axis. The worst case emissions were reported

### 4.2.3 DEVIATION FROM TEST STANDARD

No deviation

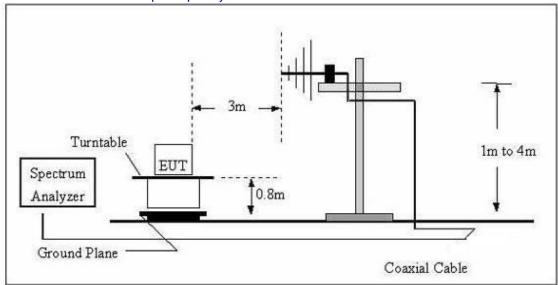

#### 4.2.4 TEST SETUP

(A) Radiated Emission Test-Up Frequency Below 30MHz

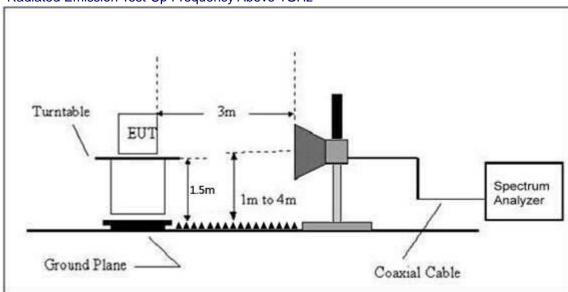

Project No.: ZKT-220411L2328 Page 16 of 37

(B) Radiated Emission Test-Up Frequency 30MHz~1GHz

(C) Radiated Emission Test-Up Frequency Above 1GHz

# 4.2.5 EUT OPERATING CONDITIONS

The EUT tested system was configured as the statements of 2.4 Unless otherwise a special operating condition is specified in the follows during the testing.

Project No.: ZKT-220411L2328 Page 17 of 37

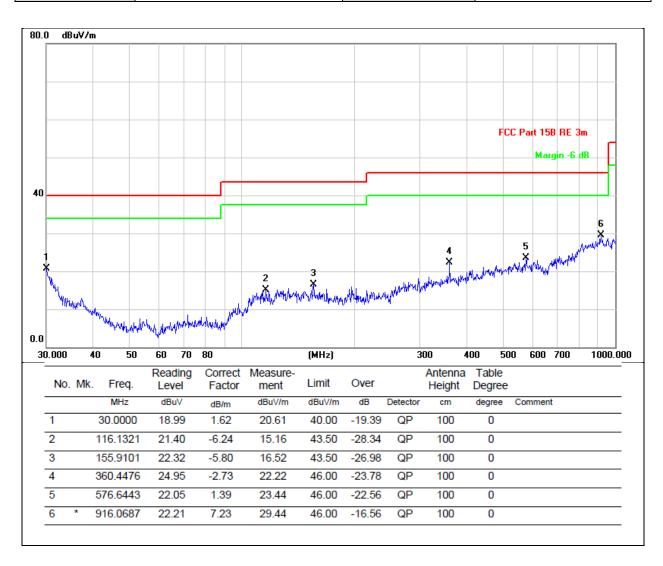

# 4.2.6 TEST RESULTS

#### Between 9KHz - 30MHz

The emission from 9 kHz to 30MHz was pre-tested and found the result was 20dB lower than the limit, and according to 15.31(o) & RSS-Gen 6.13, the test result no need to reported.

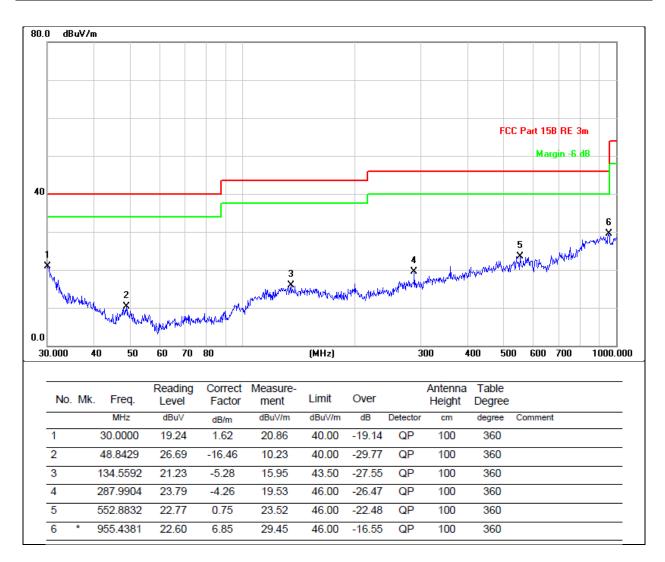

#### Between 30MHz - 1GHz

| Temperature:  | <b>26</b> ℃ | Relative Humidity: | 54%        |
|---------------|-------------|--------------------|------------|
| Pressure:     | 101kPa      | Polarization:      | Horizontal |
| Test Voltage: | DC 3.0V     | Test mode          | BT         |

Project No.: ZKT-220411L2328 Page 18 of 37

|               |            |                    | r ago to or or |
|---------------|------------|--------------------|----------------|
| Temperature:  | <b>26℃</b> | Relative Humidity: | 54%            |
| Pressure:     | 101kPa     | Polarization:      | Vertical       |
| Test Voltage: | DC 3.0V    | Test mode          | BT             |

#### Remarks:

- 1.Final Level =Receiver Read level + Antenna Factor + Cable Loss Preamplifier Factor
- 2. The emission levels of other frequencies are very lower than the limit and not show in test report.

#### **5.RADIATED BAND EMISSIONMEASUREMENT**

#### **5.1 TEST REQUIREMENT:**

| Test Requirement:     | FCC Part15 C Section 15.209 and 15.205   |                   |      |      |         |
|-----------------------|--|-------------------|------|------|---------|
| Test Method:          | ANSI C63.10: 2   | ANSI C63.10: 2013 |      |      |         |
| Test Frequency Range: | All of the restrict bands were tested, only the worst band's (2310MHz to 2500MHz) data was showed. |                   |      |      |         |
| Test site:            | Measurement Distance: 3m   |                   |      |      |         |
| Receiver setup:       | Frequency  | Detector          | RBW  | VBW  | Value   |
|                       | Above Peak 1MHz 3MHz Peak  |                   |      |      |         |
|                       | 1GHz   | Average           | 1MHz | 3MHz | Average |

#### LIMITS OF RADIATED EMISSION MEASUREMENT (Above 1000MHz)

| EDECHENCY (MILE) | Class B (dBuV/m) (at 3M) |         |  |
|------------------|--------------------------|---------|--|
| FREQUENCY (MHz)  | PEAK                     | AVERAGE |  |
| Above 1000       | 74                       | 54      |  |

#### Notes:

- (1) The limit for radiated test was performed according to FCC PART 15C.
- (2) The tighter limit applies at the band edges.
- (3) Emission level (dBuV/m)=20log Emission level (uV/m).

#### 5.2 TEST PROCEDURE

Above 1GHz test procedure as below:

- a. 1. The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could bestopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dBmargin would be re-tested one by one using peak, quasi-peak or average method as specified and then reportedin a data sheet.
- g. Test the EUT in the lowest channel, the Highest channel

Note:

Both horizontal and vertical antenna polarities were tested and performed pretest to three orthogonal axis. The worst case emissions were reported

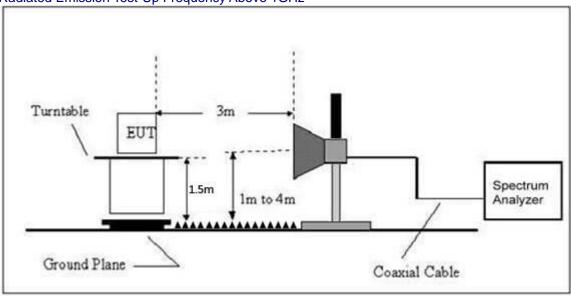

### 5.3 DEVIATION FROM TEST STANDARD

No deviation

Project No.: ZKT-220411L2328 Page 22 of 37

# 5.4 TEST SETUP

Radiated Emission Test-Up Frequency Above 1GHz

# 5.5 EUT OPERATING CONDITIONS

The EUT tested system was configured as the statements of 2.3 Unless otherwise a special operating condition is specified in the follows during the testing.

Project No.: ZKT-220411L2328 Page 23 of 37

### **6.POWER SPECTRAL DENSITY TEST**

| Test Requirement: | FCC Part15 C Section 15.247 (e)           |
|-------------------|---|
| Test Method:      | KDB558074 D0115.247 Meas Guidance v 05r02 |

### 6.1 APPLIED PROCEDURES / LIMIT

| FCC Part15 (15.247) , Subpart C |                        |           |                          |        |  |
|---------------------------------|------------------------|-----------|--------------------------|--------|--|
| Section                         | Test Item              | Limit     | Frequency Range<br>(MHz) | Result |  |
| 15.247                          | Power Spectral Density | 8dBm/3kHz | 2400-2483.5              | PASS   |  |

### **6.2 TEST PROCEDURE**

- 1. Set analyzer center frequency to DTS channel center frequency.
- 2. Set the span to 1.5 times the DTS bandwidth.
- 3. Set the RBW to:  $3 \text{ kHz} \leq \text{RBW} \leq 100 \text{ kHz}$ .
- 4. Set the VBW  $\geq$  3 x RBW.
- 5. Detector = peak.
- 6. Sweep time = auto couple.
- 7. Trace mode = max hold.
- 8. Allow trace to fully stabilize.
- 9. Use the peak marker function to determine the maximum amplitude level within the RBW.
- 10. If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.

### 6.3 DEVIATION FROM STANDARD

No deviation.

#### 6.4 TEST SETUP

#### 6.5 EUT OPERATION CONDITIONS

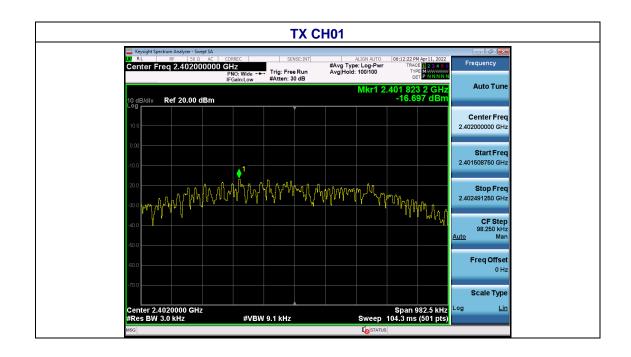

The EUT tested system was configured as the statements of 2.1 Unless otherwise a special operating condition is specified in the follows during the testing.

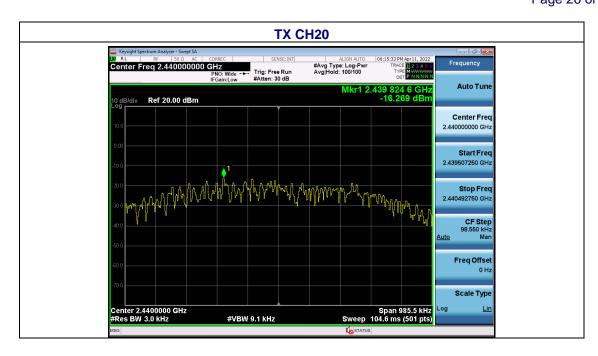

Project No.: ZKT-220411L2328 Page 25 of 37

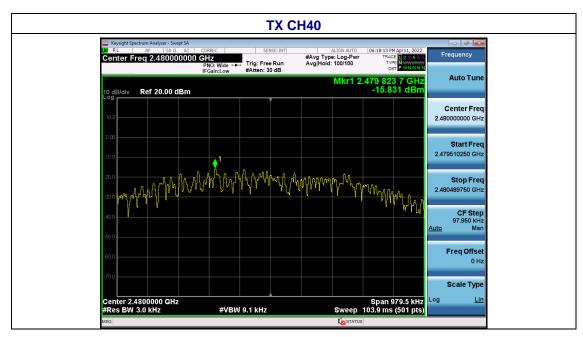

# 6.6 TEST RESULT

| Temperature : | <b>26</b> ℃ | Relative Humidity: | 54%     |
|---------------|-------------|--------------------|---------|
| Pressure :    | 101kPa      | Test Voltage :     | DC 3.0V |
| Test Mode :   | GFSK        |                    |         |

| Frequency | Power Spectral Density (dBm/3kHz) | Limit<br>(dBm/3kHz) | Result |
|-----------|-----------------------------------|---------------------|--------|
| 2402 MHz  | -16.697                           | 8                   | PASS   |
| 2440 MHz  | -16.269                           | 8                   | PASS   |
| 2480 MHz  | -15.831                           | 8                   | PASS   |

### 7. CHANNEL BANDWIDTH& 99% OCCUPY BANDWIDTH

| Test Requirement: | FCC Part15 C Section 15.247 (a)(2)       |
|-------------------|--|
| Test Method:      | KDB558074 D0115.247 Meas Guidance v05r02 |

### 7.1 APPLIED PROCEDURES / LIMIT

| FCC Part15 (15.247), Subpart C |           |                              |                          |        |
|--------------------------------|-----------|------------------------------|--------------------------|--------|
| Section                        | Test Item | Limit                        | Frequency Range<br>(MHz) | Result |
| 15.247(a)(2)                   | Bandwidth | >= 500KHz<br>(6dB bandwidth) | 2400-2483.5              | PASS   |

#### 7.2 TEST PROCEDURE

- 1. Set RBW = 100 kHz.
- 2. Set the video bandwidth (VBW) ≥ 3 xRBW.
- 3. Detector = Peak.
- 4. Trace mode = max hold.
- 5. Sweep = auto couple.
- 6. Allow the trace to stabilize.
- 7. Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

# 7.3 DEVIATION FROM STANDARD

No deviation.

### 7.4 TEST SETUP

# 7.5 EUT OPERATION CONDITIONS

The EUT tested system was configured as the statements of 2.4 Unless otherwise a special operating condition is specified in the follows during the testing.

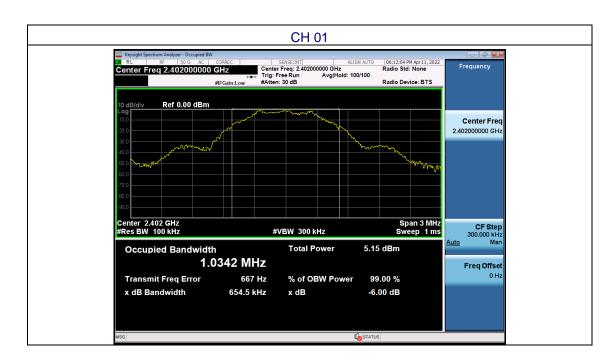

Project No.: ZKT-220411L2328 Page 28 of 37

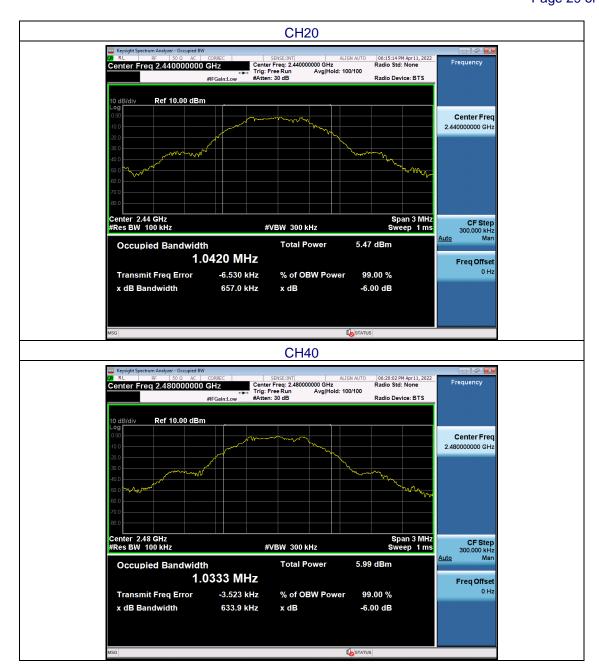

# 7.6 TEST RESULT

| Temperature : | 26℃    | Relative Humidity: | 54%     |
|---------------|--------|--------------------|---------|
| Pressure :    | 101kPa | Test Voltage :     | DC 3.0V |
| Test Mode :   | GFSK   |                    |         |

| Test CH | Channel Bandwidth (MHz) | Limit(KHz) | Result |
|---------|-------------------------|------------|--------|
| Lowest  | 0.6545                  |            |        |
| Middle  | 0.6570                  | >500       | Pass   |
| Highest | 0.6339                  |            |        |

| Test CH | 99% Occupy Bandwidth (MHz) | Result |
|---------|----------------------------|--------|
| Lowest  | 1.0342                     |        |
| Middle  | 1.0420                     | Pass   |
| Highest | 1.0333                     |        |

#### 9. CONDUCTED BAND EDGE AND SPURIOUS EMISSION

| Test Requirement: | FCC Part15 C Section 15.247 (d)          |
|-------------------|--|
| Test Method:      | KDB558074 D0115.247 Meas Guidance v05r02 |

#### 9.1 APPLICABLE STANDARD

in any 100 kHz bandwidth outside the frequency bands in which the spread spectrum intentional radiator in operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, In addition, radiated emissions which fall in the restricted bands, as defined in§15.205(a), must also comply with the radiated emission limits specified in15.209(a).

### 9.2 TEST PROCEDURE

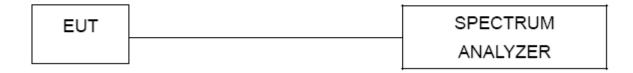

Using the following spectrum analyzer setting:

- A) Set the RBW = 100KHz.
- B) Set the VBW = 300KHz.
- C) Sweep time = auto couple.
- D) Detector function = peak.
- E) Trace mode = max hold.
- F) Allow trace to fully stabilize.

#### 9.3 DEVIATION FROM STANDARD

No deviation.

#### 9.4 TEST SETUP

### 9.5 EUT OPERATION CONDITIONS

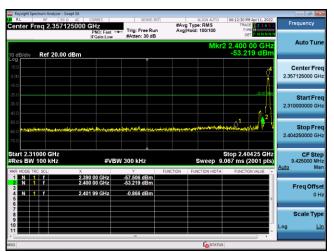

The EUT tested system was configured as the statements of 2.4 Unless otherwise a special operating condition is specified in the follows during the testing.

### **10. ANTENNA REQUIREMENT**

Standard requirement: FCC Part15 C Section 15.203 /247(c)

### 15.203 requirement:

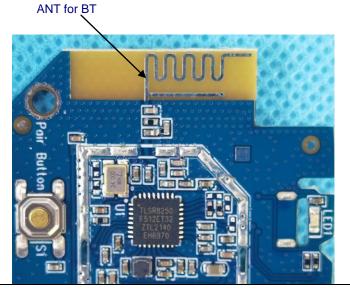

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### 15.247(c) (1)(i) requirement:

(i) Systems operating in the 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6dBi.

#### **EUT Antenna:**

The antenna is pcb antenna, the best case gain of the antennas are 0.78dBi, reference to the below photo for details

Project No.: ZKT-220411L2328 Page 37 of 37
