

# FCC RF Exposure Evaluation

## **1. Product Information**

Product name	MultiSensor				
Test Model	AMZ02				
Additional Model No.	AMZ01				
Model Declaration	PCB board, structure and internal of these model(s) are the same So no additional models were tested				
Power Supply	DC 3V By CR123A Lithium Battery				
Hardware Version	1 Los Testinos				
Software Version	1				
Frequency Range	908.4MHz ~ 916MHz				
Modulation Type	GFSK				
Antenna Description	Spring Antenna, 0dBi(Max.)				
Exposure category	General population/uncontrolled environment				
EUT Type	Production Unit				
Device Type	Mobile Devices				
LCS Testing	Sa Les Testing 13 Lantesting 13 Lantesting

#### 2. Evaluation method and Limit

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

In accordance with KDB447498D01 for Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modelled or measured field strengths or power density, is ≤ 1.0. The MPE ratio of each antenna is determined at the minimum test separation distance required by the operating configurations and exposure conditions of the host device, according to the ratio of field strengths or power density to MPE limit, at the test frequency. Either the maximum peak or spatially averaged results from measurements or numerical simulations may be used to determine the MPE ratios. Spatial averaging does not apply when MPE is estimated using simple calculations based on far-field plane-wave equivalent conditions. The antenna installation and operating requirements for the host device must meet the minimum test separation distances required by all antennas, in both standalone and simultaneous transmission operations, to satisfy compliance.

## 4. Conducted Power

#### Test Procedure

TX frequency range: 908.40 MHz

Device category: Portable device (Distance: 5mm) Max.

Field Strength: 106.98dBuV/m @3m

EIRP=E-104.7+20logD=106.98-104.7+20log3=11.82dBm

Maximum Conducted Output Power: 11.82dBm

Turn-up: 11.82±1

#### 5. Evaluation Results

As declared by the Applicant, the EUT is a wireless device used in a fix application, at least 20 cm from any body part of the user or nearby persons; from the maximum EUT RF output power, the minimum separation distance, r = 20 cm, as well as the gain of the used antenna refer to antenna information, the RF power density can be obtained.

	dBm	mW	(dBi)	(mW/cm2)	(mW/cm2)
GFSK	12	15.849	0	0.0032	0.605

### 6. Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.
