Test Result

The requirements of the tests performed as shown in the overview (clause 4) were fulfilled by the equipment under test. The complete test results are presented in the following. "Passed" indicates that the equipment under test conforms with the relevant limits of the testing standard without taking any measurement uncertainty into account as stated in clause 10.2.8.2 of ANSI C63.4 (2014). However, the measurement uncertainty is calculated and shown in this test report.

2 Operational States

Description of function of the EUT:

The LoRaWAN People Counter is a battery powered sensor for counting people crossing a horizontal line. The counter consists of two parts, an infrared (ir) transmitter part and an infrared receiver part, which always work together.

The ir-transmitter creates an intermediate infrared signal in a fixed frequency.

The ir-receiver is the main part and holds the intelligence and communication with the outside world. The created data is communicated from the internal algorithm microprocessor to the internal gateway microprocessor. The internal gateway processor communicates this information to the internal LoRaWAN module which takes care of the communication with the LoRaWAN network. Settings for the LoRaWAN interface are done via NFC memory.

The EUT set:

The following states were defined as the operating conditions

The IR transmitter and receiver were setup face to face, with a motor that simulated the people that are counted during normal operation mode. The LoRa transmitter was connected to a LoRa gateway that was connected to the cloud.

| Radiated emissio | Radiated emissions ICES-003 Issue 7 section 3.2.2 [4] | | | | | | |
|---------------------------------|--------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|---------------|--------|--|--|
| Application | Frequency range | Limits | Reference standard | Tested EUT | Status | | |
| Radiated Emission Class B | 30 to 88 MHz 88 to 216 MHz 216 to 230 MHz 230 to 960 MHz 960 to 1000 MHz above 1000 MHz | $40.0 \text{ dB}(\mu\text{V/m}) \text{ QP at } 3 \text{ m}$ $43.5 \text{ dB}(\mu\text{V/m}) \text{ QP at } 3 \text{ m}$ $46.0 \text{ dB}(\mu\text{V/m}) \text{ QP at } 3 \text{ m}$ $47.0 \text{ dB}(\mu\text{V/m}) \text{ QP at } 3 \text{ m}$ $54.0 \text{ dB}(\mu\text{V/m}) \text{ QP at } 3 \text{ m}$ $54 \text{ dB}(\mu\text{V/m}) \text{ AV at } 3 \text{ m}$ and $74 \text{ dB}(\mu\text{V/m}) \text{ PK at } 3 \text{ m}$ | ANSI C63.4 | 1 | Passed | | |

Remark: As declared by the applicant the highest internal clock frequency is 0.9275 GHz.

Therefore the radiated emission measurement must be carried out up to 5th of the highest internal clock frequency up to 9.3 GHz, in this case the measurement was carried out up to 10 GHz.

The EUT was classified by the applicant as CLASS B equipment.

5 Results

5.1 Test setups

5.1.1 Radiated: 30 MHz to 1 GHz

5.1.1.1 Preliminary and final measurement 30 MHz to 1 GHz

The preliminary and final measurements are performed in a semi-anechoic chamber with a metal ground plane at a measuring distance of 3 meters. Table-top devices are set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm. Floor-standing devices are placed directly on the turntable / ground plane. The setup of the equipment under test is in accordance with [1].

During the tests the EUT is rotated in the range of 0 $^{\circ}$ to 360 $^{\circ}$, the measuring antenna is set to horizontal and vertical polarization and raised and lowered in the range from 1 m to 4 m to find the maximum level of emissions.

The resolution bandwidth of the EMI receiver is set to the following values:

| Test | Frequency range | Step-size | Resolution bandwidth | Measuring time | Detector |
|-------------------------|-----------------|-----------|----------------------|----------------|-----------------|
| Preliminary measurement | 30 MHz to 1 GHz | 30 kHz | 120 kHz | - | Peak Average |
| Frequency peak search | ± 120 kHz | 10 kHz | 120 kHz | 1 s | Peak |
| Final measurement | 30 MHz to 1 GHz | - | 120 kHz | 1 s | QuasiPeak |

 Page 10 of 19
 Page 10 of 19

Procedure preliminary measurement:

The following procedure is used:

- 1) Set the measuring antenna to 1 m height.
- 2) Monitor the frequency range at horizontal polarization of the measuring antenna and an EUT / turntable azimuth of 0 °.
- 3) Rotate the EUT by 360° to maximize the detected signals.
- 4) Repeat steps 2 to 3 with the vertical polarization of the measuring antenna.
- 5) Increase the height of the measuring antenna for 0.5 m and repeat steps 2 to 4 until the final height of 4 m is reached.
- 6) The highest values for each frequency are saved by the software, including the measuring antenna height and polarization and the turntable azimuth for that value.

Procedure final measurement:

The following procedure is used:

- 1) Select the highest frequency peaks (lowest margin to the limit) for the final measurement.
- 2) The software determines the exact peak frequencies by doing a partial scan with reduced step size of the pre-scan of the selected peaks.
- 3) If the EUT is portable or ceiling mounted, find the worst-case EUT orientation (x,y,z) for the final test.
- 4) The worst-case measuring antenna height is found via varying the height by +/- 0.5 m from the value obtained in the preliminary measurement while monitoring the emission level.
- 5) The worst-case turntable position is found via varying the turntable azimuth by +/- 30° from the value obtained in the preliminary measurement while monitoring the emission level.
- 6) The final measurement is performed at the worst-case measuring antenna height and the worst-case turntable azimuth.
- 7) Steps 2 to 6 are repeated for each frequency peak selected in step 1.

5.1.2 Radiated: 1 GHz to 40 GHz

5.1.2.1 Preliminary and final measurement 1 to 40 GHz

The preliminary and final measurements are performed in a semi-anechoic chamber at a measuring distance of 3 meters, with floor absorbers between EUT and measuring antenna. Table-top devices are set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm. Floor-standing devices are placed directly on the turntable / ground plane. The setup of the equipment under test is in accordance with [1].

During the tests the EUT is rotated in the range of 0 ° to 360 °, the measuring antenna is set to horizontal and vertical polarization and raised and lowered in the range from 1 m to 4 m to find the maximum level of emissions. While changing the height, the measuring antenna gets tilted so that it is always aiming at the EUT.

The resolution bandwidth of the EMI receiver is set to the following values:

| Test | Frequency range | Step-size | Resolution bandwidth | Measuring time | Detector |
|-------------------------|-----------------|-----------|----------------------|----------------|-----------------|
| Preliminary measurement | 1 - 40 GHz | 250 kHz | 1 MHz | - | Peak Average |
| Frequency peak search | + / - 1 MHz | 50 kHz | 1 MHz | 100 ms | Peak |
| Final measurement | 1 - 40 GHz | - | 1 MHz | 100 ms | Peak Average |

Position of EUT: For tests for f between 30 MHz to 1 GHz, the EUT was set-up on a table with a height

of 80 cm. The distance between EUT and antenna was 3 m.

Cable guide: For detail information of test set-up and the cable guide refer to the pictures in the

annex A in the test report.

Test record: Plots for each frequency range are submitted below.

Remark: Only one nominal position was tested

Calculations:

Result $[dB\mu V/m] =$ Reading $[dB\mu V] +$ Correction $[dB\mu V/m]$

Correction $[dB\mu V/m] = AF [dB/m] + Cable attenuation [dB] + optional preamp gain [dB]$

Margin [dB] = Limit [dB μ V/m] - Result [dB μ V/m]

The measured points and the limit line in the following diagram refer to the standard measurement of the emitted interference in compliance with the above-mentioned standard. The measured points marked with ">" are the measured results of the standard subsequent measurement in a semi-anechoic chamber.

| Radiated field strength M276 | | | | |
| R&S HL562E @ 3 m 30 MHz – 1 GHz | CISPR 16-4-2 | 4.8 dB | | |
| R&S HL050 @ 3 m | - | | | |
| 1 – 6 GHz | CISPR 16-4-2 | 5.1 dB | | |
| 6 – 18 GHz | CISPR 16-4-2 | 5.4 dB | | |
| Flann Standard Gain Horns 18 – 40 GHz | - | 5.9 dB | | |

7 Test Equipment used for Tests

| No. | Test equipment | Туре | Manufacturer | Serial No. | PM. No. | Cal. Date | Cal Due |
|-----|-----------------------------------------|------------------------------------|--------------------------------|------------------------------|---------|-----------------|-----------|
| 1 | RF Switch Matrix | OSP220 | Rohde & Schwarz | | 482976 | Calibration not | necessary |
| 2 | Turntable | TT3.0-3t | Maturo | 825/2612/.01 | 483224 | Calibration not | necessary |
| 3 | Antennasupport | BAM 4.5-P-10kg | Maturo | 222/2612.01 | 483225 | Calibration not | necessary |
| 4 | Controller | NCD | Maturo | 474/2612.01 | 483226 | Calibration not | necessary |
| 5 | Semi Anechoic Chamber M276 | SAC5-2 | Albatross Projects | C62128-A540- A138-10-0006 | 483227 | Calibration not | necessary |
| 6 | Software | EMC32 | Rohde & Schwarz | 100970 | 482972 | Calibration not | necessary |
| 7 | EMI Testreceiver | ESW44 | Rohde & Schwarz | 101828 | 482979 | 08.12.2021 | 12.2023 |
| 8 | Attenuator 6 dB | WA2-6 | Weinschel | | 482793 | Calibration not | necessary |
| 9 | Ultralog Antenna | HL562E | Rohde & Schwarz | 101079 | 482978 | 18.03.2021 | 03.2024 |
| 10 | Low Noise Amplifier 100 MHz - 18 GHz | LNA-30- 00101800-25- 10P | Narda-Miteq | 2110917 | 482967 | 18.02.2020 | 02.2022 |
| 11 | LogPer. antenna | HL050 | Rohde & Schwarz | 100908 | 482977 | 13.08.2019 | 08.2022 |
| 12 | High pass filter 1 GHz | WHKX12-935- 1000-15000- 40ST | Wainwright Instruments GmbH | 12 | 482908 | Calibration not | necessary |
