- How to use radio (am/fm/wb/noaa)-----10
- Specification-----12
- Kind reminder-----12

Thank you very much for this purchase. Please read this manual carefully and use it correctly. Please be sure to read the "Safety Rules" before using the product. After reading it, please keep this manual properly.

Safety use rules

In order to prevent hazards or damage to the user and to people or objects in the vicinity, this manual sets out the matters that you are expected to observe. In order to use the product safely, please fully understand the relevant contents.

Caution This symbol indicates that if the content is ignored, it is expected to cause damage to people or damage to objects.

- In case of thunder when using outdoors, please fold the antenna and evacuate to a safe place.
 - Do not use it in an unstable place or condition.
 - Do not use, install or store the antenna in a place near the fire, such as a fireplace.
 - Please be sure to use the configured USB charging cable for charging the body. Otherwise, there is a risk that it will not charge properly.
 - Do not tie up the charging cable or place objects on it.
 - Do not operate or use with wet hands.
 - Do not subject the device to strong impacts such as drops or collisions.
 - Do not expose your eyes to light. Otherwise, it may cause physical discomfort.
 - Do not place it in a place facing the sun or under the sun for a long time.
 - Do not disassemble or modify.
 - Do not insert external objects into the ports or connectors of the product.
 - Do not drop it in water, immerse it in water, or leave it in the rain for a long time.
 - Do not wipe the machine body with thinner, gasoline or alcohol.
- *Please put a little neutral cleaning solution in the water and wipe off the stain with a hard cloth.
- Do not use it if there are any abnormalities such as odor, heat, discoloration, deformation, etc., during use or storage.

Getting to know your Weather Radio

- Only for people over the age of children, please do not put it in a place where young children can reach.
- Please unplug the USB charging cable if it is not used for a long time.
- Please do not use or store the device in a state where it is covered with oil, etc.
- When disposing of it, please follow the waste disposal instructions of each place.

*We will not be responsible for anything caused by the wrong Method of use. Please be aware of this. *The LED in the product cannot be replaced. Please be aware of this.

- ㉙ USB output
- ㉚ Reset button
- ㉛ Torch
- ㉜ Emergency Light

How to charge other devices by radio

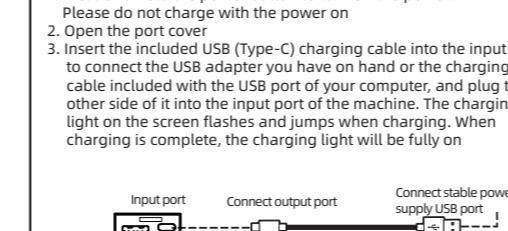

1. Press and hold the power button to turn off the power. Please do not charge with the power on.
2. Open the port cover.
3. Plug in the USB charging cable at the output port Plug in the USB charging cable at the output port and connect to an external machine. * The cable for charging is not provided. Please use the cable that comes with the external machine.

- The output of this product is 1.5A. Please do not use it if the device being charged does not support 1.5A.
- Damage or accidents to this product or rechargeable products caused by the use of unsupported equipment are not warranted.
- Please check with the manufacturer of the charged device to see if it is supported. The battery life of the recharged device may be shortened due to different specifications of the recharged device.
- This product is not guaranteed to charge all external devices. The charging speed may be very slow or almost impossible due to the specification of the device and cable being charged.
- Due to the specification of the charged device and cable, it may only charge up to 90-99%.
- Do not charge external devices at the same time as charging the unit.

How to charge your Weather Radio

Charging method when using a USB (Type-C) charging cable

1. Press and hold the power button to turn off the power. Please do not charge with the power on.
2. Open the port cover.
3. Insert the included USB (Type-C) charging cable into the input port to connect the USB adapter you have on hand or the charging cable included with the USB port of your computer, and plug the other side of it into the input port of the machine. The charging light on the screen flashes and jumps when charging. When charging is complete, the charging light will be fully on.

4. Unplug the USB charging cable to close the port cover.

Charging and power generation through the handle is the prepared charging function. It is recommended for use in emergency situations.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.

Charging method when using solar panels

1. The battery light illuminates red when charging through the solar panel.

Charging by the solar panel is the prepared charging function. It is recommended for use in emergency situations.
