

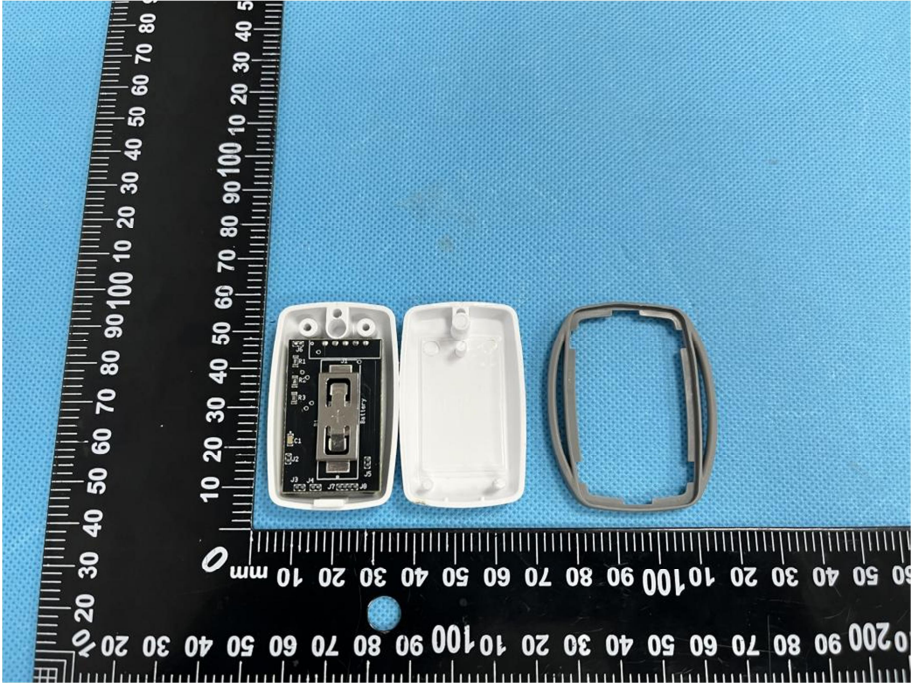

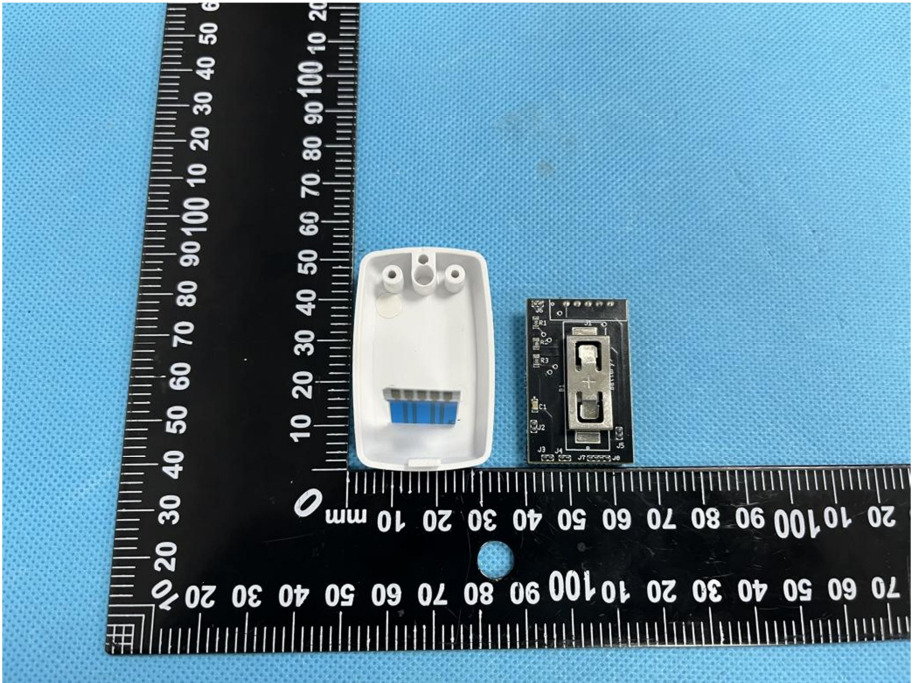

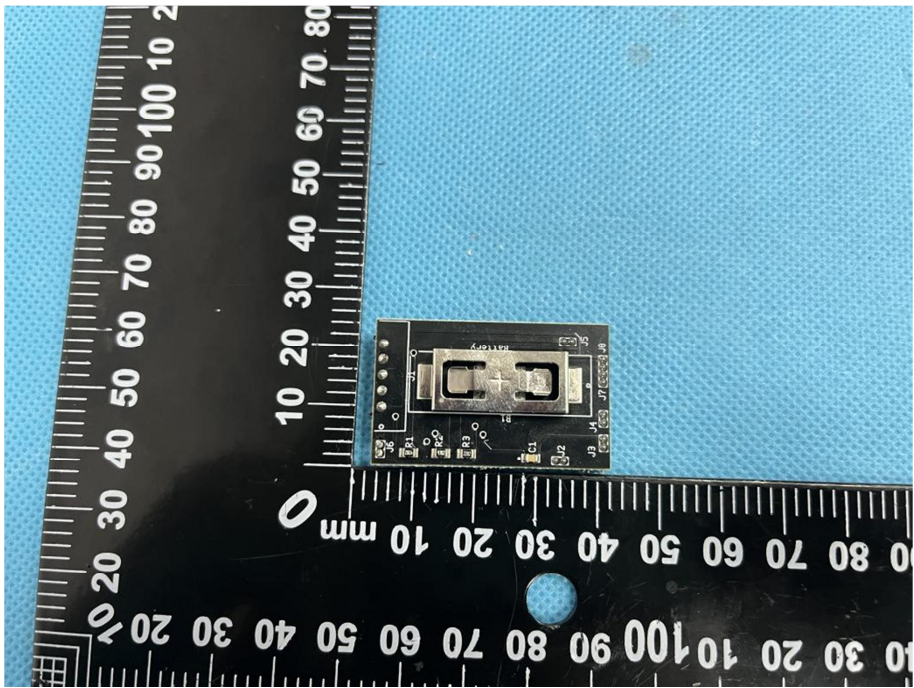

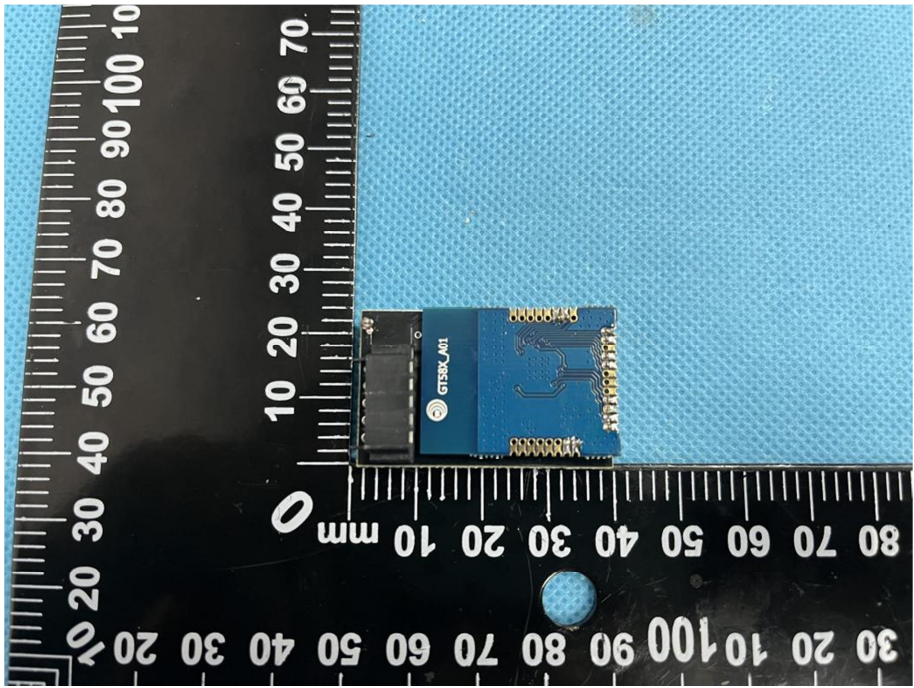

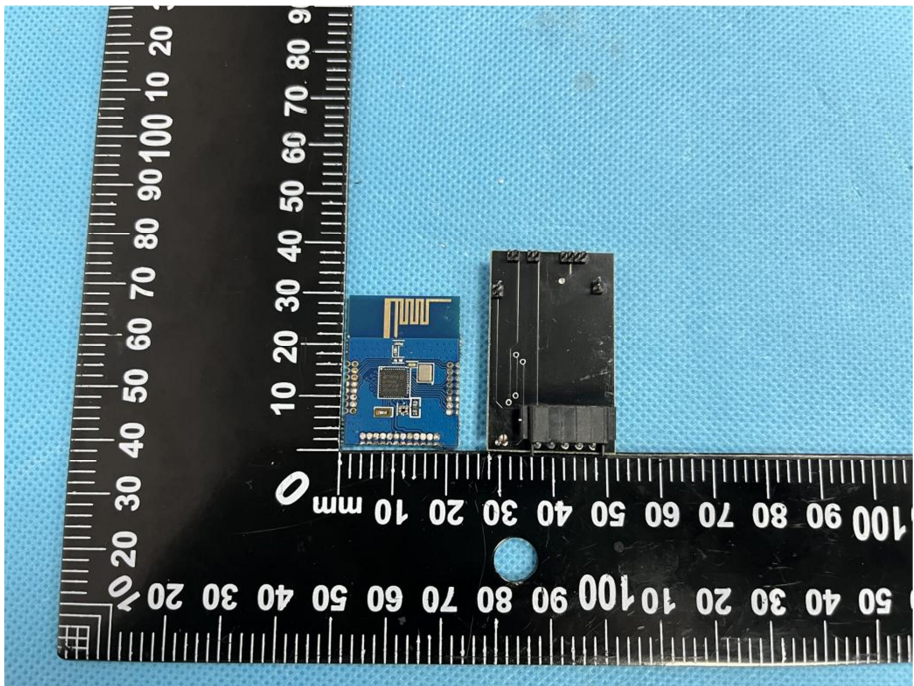

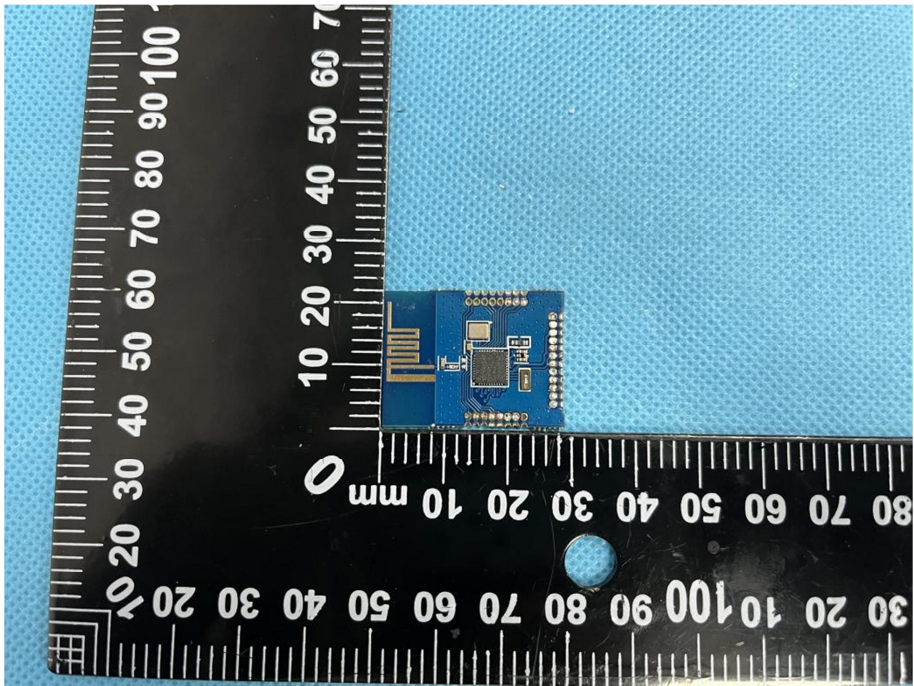

EXHIBIT 3 - EUT INTERNAL PHOTOGRAPHS

<p>EUT Housing and Board View 1</p>	 <p>This photograph shows three components of the EUT housing and board assembly. From left to right: the assembled unit with a black PCB, a white plastic housing, and a brown metal frame. A black ruler with white markings is placed vertically to the left of the components for scale. The ruler shows measurements in millimeters, with markings every 10 mm and sub-markings every 1 mm. The components are approximately 100 mm long and 40 mm wide.</p>
<p>EUT Housing and Board View 2</p>	 <p>This photograph is a close-up view of the EUT housing and board assembly. The white plastic housing is on the left, and the black PCB is on the right. The PCB has several components, including a large integrated circuit and various resistors. A black ruler with white markings is placed vertically to the left of the components for scale. The ruler shows measurements in millimeters, with markings every 10 mm and sub-markings every 1 mm. The components are approximately 100 mm long and 40 mm wide.</p>

<p>Solder Board-Component View 1</p>	 A photograph of a small, rectangular, black PCB component with a central square cutout. The component is placed on a black ruler with white markings in millimeters. The ruler shows measurements from 0 to 100 mm. The component is positioned between the 10 mm and 20 mm marks. The background is a blue textured surface.
<p>Solder Board-Component View 2</p>	 A photograph of the same PCB component from a different angle. The component is blue with gold-colored traces and pads. It is placed on the same black ruler. The ruler shows measurements from 0 to 100 mm. The component is positioned between the 10 mm and 20 mm marks. The background is a blue textured surface.

<p>Solder Board-Component View 3</p>	 A photograph showing a blue printed circuit board (PCB) component and a black component mounted on a blue textured surface. A black ruler with white markings is placed below the components for scale. The ruler shows measurements in millimeters, with markings every 10 mm and sub-markings every 1 mm. The blue component is approximately 20 mm wide and 15 mm high. The black component is approximately 25 mm wide and 15 mm high. The blue component has a gold-colored edge connector and a central chip. The black component has a similar gold-colored edge connector and a central chip.
<p>Solder Board-Component View 4</p>	 A photograph showing the same blue PCB component as in View 3, but from a different angle. The black component is not visible. The blue component is positioned on the blue textured surface. A black ruler with white markings is placed below the component for scale. The ruler shows measurements in millimeters, with markings every 10 mm and sub-markings every 1 mm. The blue component is approximately 20 mm wide and 15 mm high. The blue component has a gold-colored edge connector and a central chip.
