

## Statement of Compliance

We, Aerostar, attest to the fact that the fixed operating parameters of a device that are defined in its grant and affect its compliance cannot be modified or increased by either the installer or the end user in any manner.

The HiPointer 100 operates by transmitting a sequence of pulses with defined width and waveform characteristics in the frequency range of 9.410 to 9.463 GHz. The sequence is repeated at the pulse repetition frequency fixed by the selected operating mode.

Thank you,

Jim Nelson
