# FCC §15.247 & §1.1310 & §2.1091- MAXIMUM PERMISSIBLE EXPOSURE

## **Applicable Standard**

According to subpart 15.247 and subpart §1.1310, systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

#### Limits for Maximum Permissible Exposure (MPE) (§1.1310, §2.1091)

(B) Limits for General Population/Uncontrolled Exposure									
Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm²)	Averaging Time (minutes)					
0.3–1.34	614	1.63	<sub>*</sub> (100)	30					
1.34–30	824/f	2.19/f	<sub>*</sub> (180/f²)	30					
30–300	27.5	0.073	0.2	30					
300–1500	/	/	f/1500	30					
1500–100,000	/	/	1.0	30					

f = frequency in MHz; \* = Plane-wave equivalent power density;

According to §1.1310 and §2.1091 RF exposure is calculated.

### **Calculated Formulary:**

Predication of MPE limit at a given distance

 $S = PG/4\pi R^2$ 

#### Where:

S = power density (in appropriate units, e.g. mW/cm<sup>2</sup>);

P = power input to the antenna (in appropriate units, e.g., mW);

G = power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain:

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm);

#### **Calculated Data:**

Mode	Frequency Range	Antenna Gain*		Tune-up Conducted Power*		Evaluation Distance	Power Density	MPE Limit
	(MHz)	(dBi)	(numeric)	(dBm)	(mW)	(cm)	(mW/cm <sup>2</sup> )	(mW/cm²)
500 kHz	920.3 - 924.8	3.5	2.24	14.0	25.12	20	0.0112	0.614

Result: The device meets FCC MPE at ≥20 cm distance.

Report Number: RSC240611001-0C
