# **RF Exposure Report**

## FCC-ID: 2A8YS-M10

#### **RF Exposure Measurement**

The limit for Maximum Permissible Exposure (MPE) specified in FCC 1.1310 is followed. The gain of the antennas used in the product is extracted from the Antenna data sheets provided and also the maximum total power input to the antenna is measured. Through the Friis transmission formula and the maximum gain of the antenna, we can calculate the distance, away from the product, where the limit of MPE is reached. Although the Friis Transmission formula is far field assumption, the calculated result of that is an over-prediction for near field power density. It is taken as worst case to specify the safety range.

#### **RF Exposure Limit**

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environmental impact of the human exposure to radio-frequency (RF) radiation as specified in 1.1307 (b)

Limits for Maximum Permissible Exposure (MPE)

F= Frequency in MHz

Frequency Range	Electric Field	Magnetic Field	Power Density				
(MHz)	Strength (V/m)	Strength (A/m)	(mW/cm²)				
Limits for Occupational / controlled Exposures							
300 - 1500			F/300				
1500 - 100000			5.0				
Limits for General population / Uncontrolled Exposure							
300 - 1500			F/1500				
1500 - 100000			1.0				

## **Friss Formula**

Friss Transmission Formula: Pd = (Pout \* G) / (4\*pi\*r<sup>2</sup>) Where Pd = power density in mW/cm<sup>2</sup> Pout = output power to antenna in mW G = gain of antenna in linear scale Pi = 3.1416 R = Distance between observation point and the center of radiator in cm If we know the maximum gain of the antenna and the total output power to the antenna, through calculation, we will know MPE value at distance 20cm.

#### **EUT Operation condition**

EUT was enabled to transmit and receive at lowest, middle and highest channels.

## Classification

The antenna of this product, under normal use condition, is at least 20cm away from the body of the user. Warning statement to the user for keeping at least 20cm or more separation distance from the antenna should be included in the User manual. So, this device is classified as Mobile device.

# 2.4 WIFI

Mode	802.11b/g/n (20MHz): 2412~2462 MHz		
	802.11n (40MHz):2422~2452MHz		
Detector	PEAK		
802.11b	18±1dBm		
802.11g	17.5±1dBm		
802.11n20	17.5±1dBm		
802.11n40	17.5±1dBm		

ANT Gain (G) Antenna number: 1 Antenna gain:1dBi

Protocol	ANT Gain(gain of antenna in linear scale)	Channel Frequency (MHz)	Output Power to Antenna (dBm)	Output Power to Antenna (mW)	Power Density (mW/cm²)	Limit (mW/cm²)
802.11b	1.26	2462	19	79.4328	0.01992	1
802.11g	1.26	2462	18.5	70.7946	0.01776	1
802.11n20	1.26	2412	18.5	70.7946	0.01776	1
802.11n40	1.26	2437	18.5	70.7946	0.01776	1
