RE: Reverse Osmosis vs. Carbon Dispensers

Model Name	Rated Voltage	Rated Power	Same Circuit / Diagram / Schematic	Same PCB Layout	Same Power Supply	Same Output Characteristics - Voltage / Frequency / Wavelength	Same Motor	Same Heating Element	Same programmed software	Same construction - Shape of Enclosure	Explain difference of Operation
PureFlo Bright RO	120 - 230V - 12V	3A	YES	YES	YES	YES	YES	YES	YES	YES	The PureFlo Bright Reverse Osmosis dispenser purifies water and provides hot and cold drinking water for customers.
PureFlo Bright Carbon	120 - 230V - 12V	3A	YES	YES	YES	YES	YES	YES	YES	YES	The PureFlo Bright Carbon dispenser purifies water and provides hot and cold drinking water for customers. It does not contain the Reverse Osmosis Filters and the water quality probes to measure TDS. All other components are identical to the Reverse Osmosis model above.

Note: There are no electrical differences between the two models. All PCBs are identical and electrically the same.
