1、 Importantsafetyprecautions

◆ In a thunderstorm, do not use the phone while charging, or use the phone outdoors, to avoid being struck by lightning or other damage.

◆ Do not leave the battery in hot places, it may cause fire or explosion.

◆ Do not store or carry flammable liquids, gases, or explosive materials in the same compartment as the phone, its parts, or accessories.

◆ Remember to follow any special regulations in force in the area you are in, and always switch off your phone whenever it is forbidden to use it, or when it may cause interference or danger.

◆ Do not put the phone in or on heating devices, such as a microwave oven, stove, or radiator. The phone may explode when overheated.

◆Do not attempt to open the phone's casing. Non-expert handling of the phone may cause damages to your phone. If the phone or any of its accessories are not working properly, take them to your nearest qualified service center. The personnel there will assist you, and if necessary, arrange for the phone to be repaired.

◆Use only accessories and charging devices approved by the phone manufacture! Otherwise you risk serious damage to health and property. The battery could explode, for instance.

◆Do not short-circuit the battery. Accidental short-circuiting can occur when a metallic object like a coin, clip or pen causes a direct connection between the + and – terminals of the battery (metal strips on the battery). For example, do not carry a spare battery in a pocket or bag where the battery may contact metal objects. Short-circuiting the terminals may damage the battery or the object causing the short-circuiting.

◆The battery can be charged and discharged

hundreds of times, but it will gradually wear out. When the operation time is noticeably shorter than normal, it is time to buy a new battery. Do not continue to use the broken USB data cable or battery charger.

◆If you use any other personal medical devices, consult the manufacturer of your device to determine if it is adequately shielded from external RF energy. Your physician may be able to assist you in obtaining this information. Switch off your phone in health care facilities when regulations posted in these areas instruct you to do so.

◆Do not use mobile phones when driving. When driving a car, driving is your first responsibility. When using your wireless phone while driving, follow local regulations in the country or region you are in.

◆Keep the phone and all its parts and accessories out of the reach of small children and pets. They accidentally damage these things or choke on small parts.

◆Do not clean the phone while charging the phone. You may be electric-shocked if you use the phone while charging the phone with the USB data cable or the battery charger. Make sure to disconnect the USB data cable or the charger before using the phone.

◆Do not use harsh chemicals, cleaning solvents, or strong detergents to clean the phone. Wipe it with a soft cloth slightly dampened in a mild soap-and-water solution.

◆Dispose of worn out batteries and phone in accordance with local provisions!

2、Getting started

You need to insert the SIM card and charge the battery before using the phone.

2.1、Battery use

To extend the battery life of your device:

1. Use the standard wall charger to charge the battery for the first time.

2. During the first 3-5 charge cycles, charge the battery until the battery indicator on the display stops scrolling.

3. Avoid partial charging. Also, wait for the battery to discharge completely before charging it again.

4. Charge the battery using the USB cable only if the recommended wall charger isn't readily available.

2.2、 Installing the battery

1.Loosen the screw, hold the back cover and gently slide in upward direction to open.

2. If the battery is in the compartment, lift and pull it out in the direction of the arrow(shown below).

3.Replace the battery. Align the contacts of the battery with the corresponding connectors in the battery compartment.

2.3、Charge the battery

To charge the device battery:

1. Take the USB cable from the device packaging, and attach it to power adapter. Now connect the power adapter into a standard AC wall outlet.

2. Connect the micro USB connector on the cable into its designated port on the device (left side). The battery level indicator on the device screen will start scrolling horizontally to indicate that the battery is being charged.

3. When the battery is fully charged, the battery level indicator on the device screen will stop scrolling horizontally. Once charging is complete, disconnect the charger from the device, and then from the wall outlet.

NOTE: Exercise extreme caution while connecting the charger to the device. The connectors on the charger and on the phone may get damaged if too much force is applied while connecting them. If the battery is completely discharged, it may take a while before the on-screen charging indicator starts scrolling.

2.4、SIM card information

When you subscribe to a cellular network, you receive a plug-in SIM (Subscriber Identity Module) card loaded with your subscription details, such as your PIN, and available optional services.

Be careful to handle, insert or remove the SIM card since the SIM card and the contacts inside can easily be damaged by scratching or bending.

2.5、Installing the SIM card

Insert the SIM cards into their respective slots. Make sure that the contact area on the cards is facing the connectors on the device (as shown below).

2.6、 Access codes

There are access codes for your SIM card.

These codes help you to protect the phone against unauthorized use.

When requested for any of the code explained below, key-in the appropriate code (displayed as asterisks) and press the OK key.

PIN

The Personal Identification Number or PIN (4-8digits) protects your SIM card against unauthorized use. The PIN comes with the SIM card; see the SIM card instruction provided with your card.

If you enter an incorrect PIN three times in succession, the code will be disabled and cannot be used until you re-enable it by entering the PUK.

PUK

The 8-digit PUK (Personal Unblocking Key) is required to change a disabled PIN. The PUK may be supplied with the SIM card. If not, or in case you have lost it, please contact your service provider.

To re-enable your PIN, proceed as follows.

1. Key-in the PUK and press the OK key.

2. Enter a new PIN of your choice and press the OK key.

3. When the Confirm New PIN message is displayed, key-in the same code again and press the OK key.

If you enter an incorrect PUK ten times in succession, the SIM card becomes invalid.

Please contact your service provider for a new card.

2.7、 Insert memory card

Insert memory card. Take compatible T-Flash card, and place it into its slot. (shown below).

2.8、 Earphone

Connect the earphone connector on the cable into its designated port on the device (left side).

2.9、 Standby mode

In the main display, you may see several icons displayed on your status bar. The meaning for each icon is explained below:

(signal icon)	Vertical bars indicate the signal strength of the GSM network signal. Five bars indicate that your current position has the best reception.
(dual signal icons)	Dual SIM are Activated.
(envelope icon)	Indicates new text message.
(divert icon)	Indicates that the SIM 1 call divert is activated.
(ring icon)	Indicates that the alert type of your phone is set as ring.

This feature would reset the phone to the same settings as those configured at the factory. In this case, it does not delete the downloaded objects and phonebook records.

You will need to input password to restore factory settings. The initial password is 1122.

5、Troubleshooting

If problems occur when using the phone, try to find a solution here first.

Problems	Reasons and Solutions
Can't switch on	Press and hold end key until image appears on the display Check the battery contacts. Remove and insert battery and switch your phone on again Check the battery charge level
Can't connect to network	Move into an area of better coverage Beyond the network cover area Contact your service provider if your SIM card is invalid
The audio quality of the call is poor	Press navigator key to increase the volume when you are in a call Check the signal strength indicator on the display The line is busy and can not be connected to network; you can not make a call
Standby time too short	When failing to connect to network, the phone will keep searching base station that consumes much battery and reduces standby time. Move to an area with stronger signal strength or switch your phone off temporarily. Replace the battery.
SIM card error	Make sure that the chips in SIM card are not damaged; use the clean cloth to scratch it. Make sure that SIM card is inserted correctly. SIM card invalid. Contact your service provider.

Can not dial calls	Make sure that the number you dialed is available and the dial key has been pressed. Make sure that there is enough money to make a call. Make sure that SIM card is valid.
Can not receive calls	Make sure that your phone has connected to network (Check if the network is too busy or invalid). Make sure that there is enough money to receive the call. Make sure that SIM card is valid. Check call divert settings and I ncoming call barring settings
The battery won't charge	Make sure that the battery is inserted correctly. Securely connect the charger to the phone.
Can not set some functions	The operation is wrong. The network providers do not support the function, or you don't apply the function.

Technical Support

This product is designed as shockproof phone, however, please don't hit the phone intentionally. The brutal manipulation may bring damages to the performance of your phone, and it will be no longer under warranty.

FCC RF Exposure Information and Statement

The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. Device types M.T.T. Protection 2G (FCC ID: 2AA7A-MTT) has also been tested against this SAR limit. The highest SAR value reported under this standard during product certification for use at the head is 0.791W/kg and when properly worn on the body is 1.192W/kg. This device was tested for typical body-worn operations with the back of the handset kept 15mm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 15mm separation distance between the user's body and the back of the handset. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

FCC WARNING

This device complies with Part 15 of the FCC Rules. Operation is
subject to the following two conditions:
(1) this device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.
NOTE 1: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
-Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
-Consult the dealer or an experienced radio/TV technician for help.
NOTE 2: Any changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
