

Read and understand thoroughly this safety awareness & instruction before using and keep it for future reference, the device is called VAIP in this text.

Safety Precaution:

Do not place heavy object on the VAIP.

Do not let any solid or liquid fall into or infiltrate the VAIP.

Do not disassemble, repair or replace the parts of the VAIP by yourself.

Using environment:

Please place and use the VAIP between 0°C and 40 °C. Avoid direct sunlight or stay away from heat.

Do not install the VAIP in damp environment.

Do not expose the VAIP in smoky or dusty environment.

Do not drop the VAIP and avoid strongly collision.

Please insure the VAIP level installation in a stable workplace and prevent the VAIP to be dropped.

Please install in well-ventilated place. Do not block the vents.

The VAIP only can be used within the range of rated input and output.

1 Product Introduction

1.1 Product Overview

The VAIP series is a type of excellent intelligent home product specially designed for digital field. It introduces embedded LINUX operating system which is more stable. It introduces the technology of standard H.264 mp video compression format and G.711A audio compression format which insure the high-quality image, low-bit rate and single-frame playing. It introduces Cloudlink P2P network transmission technology which achieves strong network data transmission ability and remote control ability. It introduces wireless match codes technology and wireless detector to construct a strong alarm system.

1.2 Main functions

Video call

It can realize the video call not only between two VAIP, but also among smart phone, tablet computer and VAIP.

Record function

After inserting U disk or Micro SD to VAIP, it can realize simultaneous storage and recording of audio and video, and different recording mode such as manual recording, alarm

recording, timing recording can be selected.

You can search video files intelligent on the device and playback video on the screen directly.

Remote monitor

It can achieve remote monitor by using mobile APP to dial 3C number. At the same time can remote control the equipment' s moving .

Wireless alarm

It introduces wireless match code and wireless detector to construct alarm system, and also email alarm function is supported.

2 Open-package inspection and cable connection

2.1 Open package check

First, please check whether there is any visible damage to the package appearance. The protective material used for the package of the VAIP can sustain most accidental clashes during the transportation.

Then, please open the box and get rid of the plastic protective coating. Check whether there is any visible damage to the VAIP appearance.

2.2 The front panel and rear panel

The key function specification in the front panel and the interface specification in the rear panel are described in details in the manual.

Please check carefully the product model in the bottom plate or in the rear panel film whether is accordant with the model you ordered.

The label in the bottom plate or in the rear panel is very important for after-sales service, please protect it carefully.

Please provide the product model and serial number in the label before you contact with our after sales.

2.3 The front and rear panel key function

Pilot lamp:From left to right are:

(Network, Defence,Recording, Alarm).

The front button operation function

Num	Button name	Mark	Function
1	Number button	0-9	◇ Input the number key during user input state
2	*/.		◇ Short press to decrease the volume during video call or playing state
			◇ Short press to delete text during edit state
			◇ Long press to record/stop recording during manual record mode
3	Ctrl shift/defense		◇ Short press to increase the volume during video call or playing state
			◇ Short press to switch input method during edit state
			◇ Long press to do defense/cancel operation
4	Dial/preview		◇ Short press to dial video call during standby state

			<ul style="list-style-type: none"> ◇ Long press to enter real-time preview during standby mode
5	Hang up/Exit		<ul style="list-style-type: none"> ◇ Hang up call during video call
			<ul style="list-style-type: none"> ◇ Back to above level menu and exit current state
			<ul style="list-style-type: none"> ◇ Short press to do main menu quit during playback and preview
6	Direction button	   	<ul style="list-style-type: none"> ◇ Remove the cursor by up and down buttons when the main menu or submenu is popped
			<ul style="list-style-type: none"> ◇ Add or decrease number during edit state
			<ul style="list-style-type: none"> ◇ Change the setting in the menu
			<ul style="list-style-type: none"> ◇ Play last or next video file by up and down buttons during the playback state
			<ul style="list-style-type: none"> ◇ Short press to adjust camera up or down direction during standby, preview, video call state.
			<ul style="list-style-type: none"> ◇ Move the cursor by left and right buttons when

			the main menu or submenu is popped
			◇ Play in the multi-low or multi-fast video during the playback state
			◇ Short press to adjust camera left or right direction during standby, preview, video call state
			◇ Enter main menu
			◇ Confirm
			◇ Short press to pause playing during playback state
			◇ Short press to do screen switching during video call

2.4 The rear panel

- ①Network interface ②WIFI ant interface(optional) ③match code indicator ④Learning button
⑤Power switch ⑥Power interface ⑦USB interface ⑧3C smart card interface

⑨Micro SD card interface ⑩Earphone interface

3 Basic operation

3.1 Turn on

Plug the power supply and turn on the power supply switch to “ON”, then the VAIP enters the system.

Suggest using the stable input voltage and power input ripple with less interference to make sure the VAIP power supply.

Suggest using the UPS to protect the power supply under allowable conditions

3.2 Turn off

Check and confirm the recording is stopped before turn off the VAIP, turn off the power supply switch to “OFF”, or pull the rear panel power switch that can switch power.

Auto resume after power failure

If the VAIP is shut down abnormally under recording state, it can automatically backup video and resume previous working status after power failure.

Insert the U disk or Micro SD card

Please make sure the VAIP is not in recording state before inserting the U disk or Micro SD card, otherwise information will loss or storage equipment will be damaged.

Replace the battery

Please save the setting information and turn off the power supply switch before replacing the battery. The VAIP uses button battery. Please check the system time regularly, if the time is not correct, you need replace the battery. Suggest replacing the battery every year and using the same type battery.

Note: The setting information must be saved before replacing the battery, otherwise information will lose.

3.3 Standby state

Turn on the VAIP and enter standby state, the system standby is shown as below.

Picture 3.1 Standby interface

Icons meaning under standby state:

1		USB detection icon	2		Micro SD detection icon
3		Motion detection icon	4		3C smart card detection icon

5		WIFI connection icon	6		Internet connection icon
7		Sever abnormal connection icon			

4 Main menu

Press button  , the system main menu is shown as below. You can operate and set each function in this menu.

Picture 4.1 Main menu interface

4.1 Main menu navigation

Main menu	Function Overview
General	Set the basic parameters of the system
System	Update and maintain system and show related information of the system
Play	Search and play video files
Network	Set the basic parameters of the network
Alarm	Set the basic parameters of the alarm
Record	Set different record modes

4.2 General setup

Picture 4.2 General setup interface

Set the basic parameters of the system, please click [main menu]> [general] to enter the general setup interface.

【Time setup】 Set the system date and time.

【Language setup】 Set the system language.

【Video format】 set the video format of the system According to PAL or NTSC used in

different areas.

【Access password】 Set the password of network remote monitor, the password only can be numbers; You must set access password for the system in the first time, otherwise the remote monitor can not be used.

4.3 System setup

Update and maintain the system, please click [main menu]> [system] to enter the general

Picture 4.3 System setup interface

【Restore factory】 Restore system to factory setting.

【System update】 You can update and maintain the system when there is system software need to be updated. There are two ways: local update and cloud update. Local update: Copy the update file to U disk or Micro SD card, then insert U disk or Micro SD card, Press update button  and then press button  to update after system detect the update file, the system will reboot up after finish updating. Cloud update: Under network state, press the update button , then the system will automatically detect whether there is file need to be updated. Press button , the system will automatically upload and update after detect the new version .The system will reboot up after finish updating.

【3C ID】 The 3C ID number will be shown here after insert 3C smart card to the device.

【Version information】 The current system version information is shown.

4.4 Play

Search and play video files, you can click [main menu]> [play] to enter the video playback interface.

Picture 4.4 Video retrieval

【Fast retrieval】 Enter the video playback interface, you can search system video file of the day after press search button  directly. If there is no video, it will show “no video file

found”.

Picture 4.5 Video retrieval

【Accurate retrieval】 Move the cursor to adjust the starting and ending time, the window will pop-up the video file list which conforms to searching condition after press search button , press up-down and left-right buttons to move the cursor to select the target file, then press button  to play.

Picture 4.6 Video retrieval

【Play】 During play state, press left-right buttons to finish fast forward and rewind operation and press up-down buttons to switch different video files. Press the button **OK** to stop playing. Press right key for single-frame playing during stop-playing state. Press button ***/*** or **#/🔒** can adjust the volume.

4.5 Network setup

Set network parameters, you can click [main menu]> [network] to enter the network setup

interface.

Picture 4.7 Network setup

【IP】 Set system IP address, you can automatically or manually set the IP address. User should make sure enable router's DHCP, otherwise it can not find IP address.

Through automatically set the IP address, system will automatic access to IP by DHCP; Through manually set the IP address, you can manually set the IP address(system will automatically determine the network segment of IP address, you only need manually set the

last one of IP address.)

【Internet】 According to access way to network to choose wired or WIFI connection to internet.

Equipped with wire, system will connect internet through the wired network; Using WIFI, system will search WIFI and set the connection accordingly, the connected internet name will be shown after successful access, and WIFI connection icon will be shown in standby interface.

Re: The function optional , some models without it , please notice

Picture 4.8 WIFI setup

4.6 Alarm setup

Set alarm parameters, you can click [main menu]> [alarm] to enter the alarm setup interface. You need pre-start the defence system before using alarm function, system enter defence state after long press button  in 15 seconds, defence indicator will constant light.

Picture 4.9 Alarm setup

【Send e-mail】When there is alarm or alarm linkage of capture images, system will send specific alarm information or capture images to the given e-mail address.

Picture 4.10 Email alarm

【Bunding ID】 When the alarm occurs, system will send an alert to the given APP ID, when the user's APP receive the alert, you can remote monitor the site directly.

【Motion detection】 This option is turned on and when the system detects the mobile signal that reached a preset sensitivity by analyzing the video image, motion detection alarm will be booted.

【Buzzer】 You can set the alarm duration of system speaker when alarm appears.

4.7 Recording setup

Set different record modes, you can click [main menu]> [record] to enter the record setup interface. You can set three record modes: manual,alarm and timed.The priority of the manual recording is the highest, regardless of any recording modes, once long press  button, it will enter manual recording mode.The record LED indicator will blink during record state.

【Manual】 Long press record button can manually control the opening and closing.

Picture 4.11 Record setup (1)

【Alarm】 When motion detection or outside alarm triggers, system will automatically enter record state; Record timing indicates that record duration after trigger the alarm.

Picture 4.11 Record setup (2)

【Timed】 You can set the record time, system will automatically enter record state during this time.

Picture 4.12 Record setup (3)

5 Remote monitor and video call

5.1 Remote monitor

You need correctly connect to the network before remote monitor. For network setup, please see 4.5 【Main menu】 > 【network setup】 .

Remote monitor between two devices

5.2 Video call

Video call between two devices

Dial among WAN network: After VAIP connecting to internet normally, the icon of standby abnormal network connection will disappear, the VAIP is online state, then you can make video calls after dial the 3C ID of the other device.

Dial among LAN network: If two devices in the same LAN, you can make video calls after dial the last numbers of the other IP address. For Example: the IP address of device A or device B in LAN is: 192.168.1.10 and 192.168.1.11, then device A can dial “11” to make video call with device B.

Using mobile devices such as cell phone or tablet computer to make video calls with the device.

Boot up the application after normally installing 2CU client software to cell phone or tablet computer etc, click on the dial screen and enter the 3C ID as required, click video call button to make video call with the VAIP; If the video call fails, please check whether the network of mobile device is available.

Step4. connect successful

Steps of the Video call

6 Wireless Match

Re:some models without this function

6.1 Wireless detector match code to VAIP

In order to trigger the alarm, all the wireless detectors must match code to the VAIP. The specific operation as follows: First press device match button, when the red lamp of two-color LED lights up, then trigger the wireless detector that need to be matched to transmit a signal, if the red lamp of two-color LED flashes which indicates match code is success, after match code succeed, when the wireless detector is triggered then the red lamp of two-color LED will be lighted up. Analogously, the device can match 4 different-code wireless detectors.

6.2 Remote controller match code to VAIP

In order to control the device normally and place or cancel the alarm, all the remote controller must match code to the VAIP. The specific operation as follows: First quickly press device match button twice, when the blue lamp of two-color LED lights up, then press any buttons of remote controller to transmit a signal, if the blue lamp of two-color LED flashes

which indicates match code is successful, after the match succeed, when press any buttons of remote controller then the blue lamp of two-color LED will be lighted up. Analogously, the VAIP can match 4 different-code remote controllers.

6.3 Remove all wireless detector and remote control

Long press equipment match button, double color LED flashes represent successful remove of all wireless detector and remote control.

7 FAQ and maintenance

7.1 FAQ

If the problems you encounter are not listed, please contact local service or call the HQ service, we will try the best to serve you ASAP.

The VAIP cannot boot up normally.

Possible reasons as follows:

- 1.The input power supply is wrong.
- 2.Switch power supply line is not in good connection.

- 3.Switch power supply is damaged.
- 4.The program updating is wrong.
- 5.The front panel is damaged.
6. The mainboard is damaged.

The VAIP reboots automatically or stops working after boot up a few minutes

Possible reasons as follows:

- 1.The input voltage is not stable or too low.
- 2.The power of switch power supply is low.
- 3.Frontal video signal is not stable.
- 4.Bad heat radiator or too much dust or bad running circumstance of the VAIP.
- 5.The hardware of the VAIP is damaged.

System can not detect USB or Micro SD card

Possible reasons as follows:

- 1.The USB or Micro SD card is not in good connection.
- 2.The card slot is damaged.

- 3.The storage equipment is damaged.
- 4.The USB port of main board is damaged.

Can not find the video files in local playback mode.

Possible reasons as follows:

- 1.The storage equipment is damaged.
- 2.The query terms is wrong.
- 3.The video files to locate was covered.
- 4.The recording is not on.

The local video is not clear.

Possible reasons as follows:

- 1.The select image quality is too low.
- 2.The reading program is wrong, bit rate is low and full screen mosaic during playback. Normally the problem will be solved after reboot up the VAIP.
- 3.The storage equipment is damaged.
- 4.The hardware is damaged.

There is no audio signal in the surveillance window.

Possible reasons as follows:

- 1.It is not an active tone arm.
- 2.It is not an active sound box.
- 3.The audio lines are damaged.
- 4.The hardware of the VAIP is damaged.

The display time is wrong.

Possible reasons as follows:

- 1.Setting is wrong.
- 2.The battery is in bad connection or the voltage is too low.
- 3.The oscillation is damaged.
4. The hardware is damaged.

The motion detect does not work.

Possible reasons as follows:

- 1.The motion detect area setting is not correct.
- 2.The sensitivity is too low.

3.Limited by some hardware version.

The image is not clear or there is no image in network preview or video file playback state.

Possible reasons as follows:

- 1.Network is not stable.
- 2.The used machine is resource limited.
- 3.The user has no surveillance permission.

Network connection is not stable.

Possible reasons as follows:

- 1.Network is not stable.
- 2.IP address is conflicted.
- 3.MAC address is conflicted.
- 4.The network card of the computer or the computer is bad.

7.2 Maintenance

Please use the VAIP in dry environment so that the VAIP can work long-term and stably. The damp dust in the circuit board will cause short-circuit which will interfere the VAIP normal

running or damages the VAIP.

Please keep the grounding well done to prevent the video or audio signal interfered and the VAIP from static or inductive electricity.

Please keep the VAIP away from the heat resource.

Please keep the VAIP ventilated for better heat radiator.

Please check and maintain the system regularly.

This manual only for the basic operation, please refer to the electronic manual CD-ROM for detailed operation.

Equipment updated in real time, there is no notice if upgraded.

If you have doubt or dispute for product description, all will be subjected to the ultimate interpretation of the company.

The manual is for the series products reference, the specific operation of each product is not an exhaustive; if you have any difficult problems, please contact the company customer service department.

7.3 Specification:

System	Operating system	Embedded Linux OS
Video	Image sensor	30W pixels CMOS
	Video Compression Format	H.264
	Signal System	PAL/NTSC
	Video Resolution	VGA:640*480
	Recording Speed	VGA@ 25 fps or 30 fps
	Motion Detection	YES
	Minimum illumination	0LUX/F1.2
	Video call	YES
	IR	YES
	Video output	BT656/3.5 inch TFT LCD
Audio	Compression	G.711A
	Audio Input	Built-in microphone or an external headset
	Audio Output	Built-in speakers or an external headset
Recording	Recording Mode	Manual/Timer/Motion / Schedule

Manager	Video Storage	USB、Micro SD
Alarm	Alarm Input(Optional)	Learning wireless sensor alarm input
	Alarm triggered	Speakers alarm、Alarm recording、Capture、Email
Others	Ethernet Interface	RJ45 100M / 1000M Base-TX
	USB / Micro SD	1* USB 2.0 / 1* Micro SD
	Wifi(Optional)	YES, 802.11 b/g/n
	Headset	One 3.5 headphone jack
	Power Supply	DC 12V 1A
	PTZ Control	Built-in horizontal and vertical control motor
	Power Consumption	2W
	Weight/Dimensions (mm)	800g /110*120*240mm

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
