

PARAGON ROBOTICS

November 20, 2017

Dear Application Examiner,

{Paragon Robotics, model: OE3W, FCC ID: 2AAA2-OE3W}, in order to make this module field serviceable for certain applications, the device would be installed under Professional Installation.

This hardware is not readily available to the average customer since the customer would be asking for a modified version of a product to fit their application. The reason for a modified version, an extension of the antenna, would be to gain a clear signal in environments that cause poor wireless range. This modified device is not readily available for purchase, rather it is a special request from the customer to meet their needs. The reason why this equipment would be required to be installed by a professional installer is to comply with the FCC requirements of section 15.203 and 15.204©.

Regards,

Julian Lamb
