
Getting Started manual

Safety issues and environmental protection

-  Please do not use the mobile phone when driving to avoid accidents, or use earphone.
-  Medical Equipment: Please power off the mobile phone in the Medical care place or the place with "No wireless device" notice.
-  Keep the phone powered off in flight. Make sure cancelling the alarm and auto power setting to avoid power on automatically ;
-  Put the wasted batteries into the recycling trash and do not throw it away.
-  Please do not use mobile phone either in too high or too low temperature environment, sunlight or humidity place.
-  In order to be waterproof and dustproof, please ensure battery cover, battery lock catch, screw plug, earphone plug and USB rubber plug are in perfectly close status.
- Do not use the mobile phone in the gas station, fuel or chemicals nearby.
- Power off the mobile phone in the blasting site.
- Use the original accessories and battery to get the best performance. Do not connect with the incompatible parts.
- Do not disassemble the mobile phone by yourself and please go to the assigned service center for maintenance.
- Use the mobile phone in the network coverage.
- Call the local emergency number in case of emergency for help.
- Data Backup : Please backup the important info to avoid loss.
- Your device is a radio transmitter and receiver. It is designed not to exceed the international guidelines limits for exposure to radio waves recommended by (ICNIRP). These guidelines were developed by the independent scientific organization ICNIRP. It include safety margins to protect all people, regardless of age or health.
 - The exposure guidelines for mobile devices employ a unit of measurement known as the Specific Absorption Rate or SAR. The SAR limit stated in the ICNIRP guidelines is 2.0 watts/kilogram (W/kg) averaged over 10 grams tissue. Use of device accessories may result in different SAR values. SAR values may vary depending on national reporting and testing requirements and the network band.

with the EN62311-2008 SAR test requirements., The maximum SAR of this device on ear, body is: 2 w/kg, according to the ICNIRP standard. The device actual SAR is: 0.443 ~ 0.901w/kg 

Introduction

Status Icons

Type	Definition		
	GSM network		New email
	UMTS network		Bluetooth
	Unknown network		Alarm clock
	Flight network		Memory full
	Battery status		Memory card as U disk
	Roam GSM network		Music
	Roam UMTS network		Radio
	GPRS		Vibrating
	EDGE		Silent
	UMTS		Ringtone
	Calling		Ringtone+ vibrating
	Missed call		
	Unread SMS		
	Unread MMS		

Specification

Frequency	GSM 850/900/1800/1900MHz ; WCDMA 850/1900/2100MHz
Size	115 x 53 x 23 mm
Dual mode single stay	Dual mode single stay, single connect
Battery capacity	1500mAh Li-ion battery
Talking time :	5 h, use 2G GSM; 4 h, use 3G GSM;
Standby time	288h
Memory capacity	170MB , Micro-SD card up to 8G
Phonebook、SMS capacity、call record	Phonebook : 1000 pcs in memory card SMS : 2000pcs in the phone; SIM card could also save SMS. Missed call : 30 Received call : 30 Dialed call : 30
MMS、Email	Support
Camera、Video recorder、Video player	Camera supports 2.0M; Video record format : 3GP,MPEG4,H263,H264 (VIEDO is software of the third party); Video play : Support 3GP/MP4 and full screen
Talking firewall/ Hands free	Support
Bluetooth、WAP	Bluetooth support V2.1, stereo headphone; WAP support 2.0
Call divert/call waiting	Network support
JAVA	Support
MP3、record	Audio file format support : MP3,MP4,MIDI,AMR,AAC
FM	Support , FM support RDS
Mobile phone lock、keypad lock、data lock	Support
Memorandum、unit conversion、stopwatch、count down	Support
Earphone port	micro USB
Flash light、Torch	Support
GPS	Support

Install USIM/SIM card/Micro SD-crad , take out battery, and charge

1 Open the battery cover

Power off the phone, rotate the screw from anti-clockwise direction to loose the screws, then you can take off the battery cover and the battery.

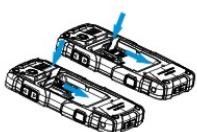

3 Install or uninstall the battery

Remove the battery by lifting it up from the bottom part. Insert the battery with the label side up. Align the tabs and metal contacts on top of the battery with the tabs and contacts on the top of the phone. Slide into place and press down.

2 Insert SIM and Micro-SD card

Open up SIM or Micro-SD card holders and insert SIM card or Micro SD card into the slots, then close the holder.

4 Connect USB port or charge the phone

Connect the data cable with phone and charger, you can charge the phone. Connect the data cable with phone and computer, you can charge or start data transfer.

Note: By first time you use the phone, please recharge for 12hours.

- ※ In order to be waterproof and dustproof, please ensure battery cover, battery lock catch, screw plug, earphone plug and USB rubber plug are in perfectly close status. This will not be specially declared in below content.

Earphone jack rubber plug pressure

Rubber plug pressed

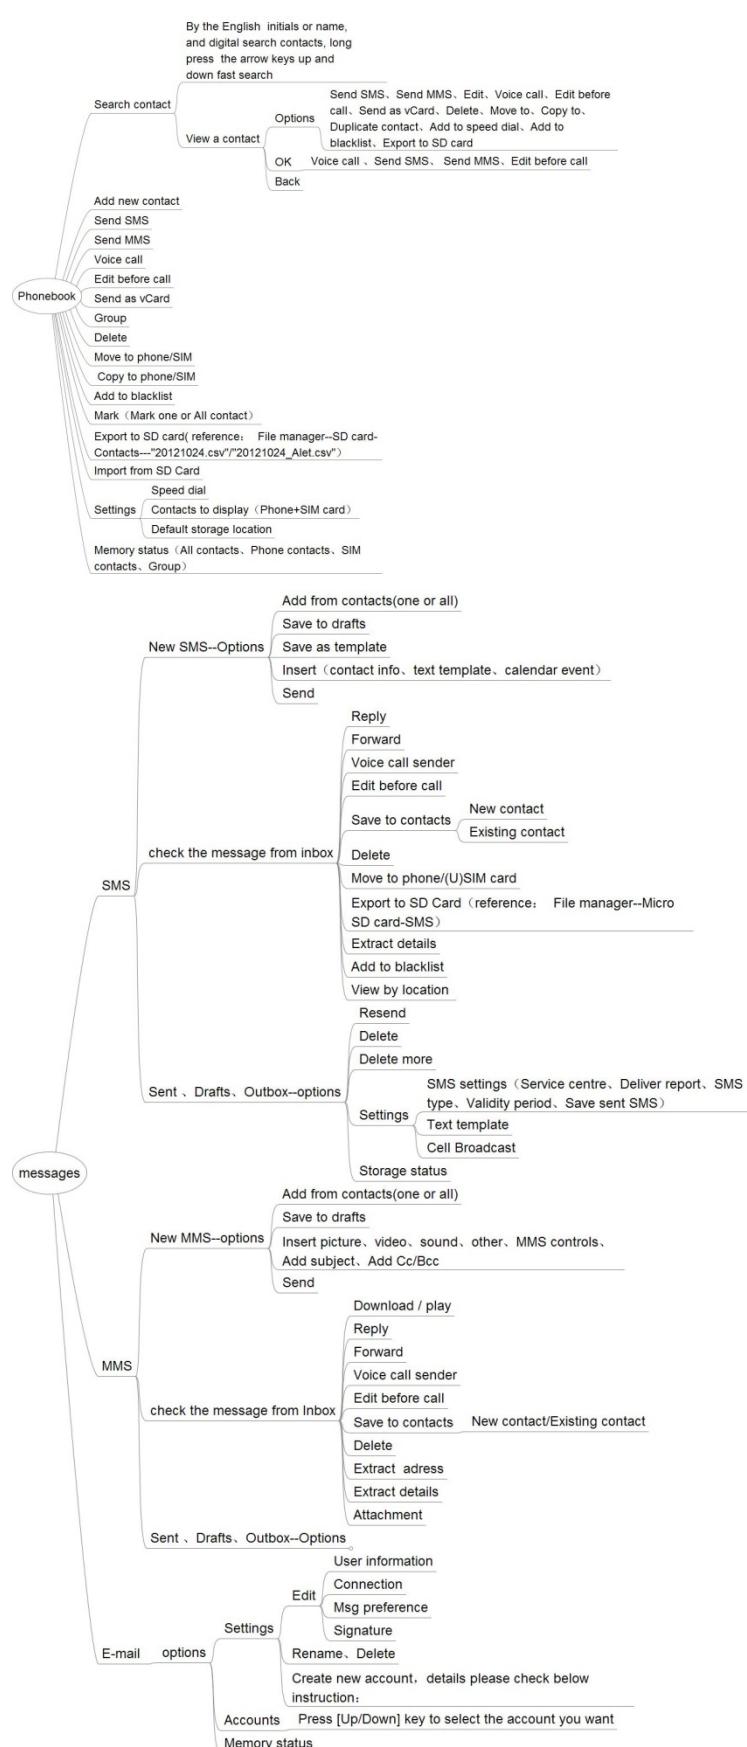

USB cover pressed

■ Storage tips :

Use USB cable to copy and move documents, copy to MP3 to My Music, copy MP4/ AVI to Video clips, record documents/video documents to Video clips, copy pictures to Photos.

Notice : Do not take out USB cable directly, please quit first, in order to avoid data loss.

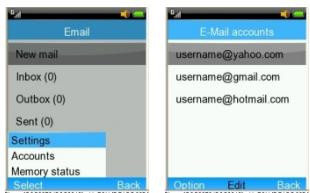

Menu Navigation

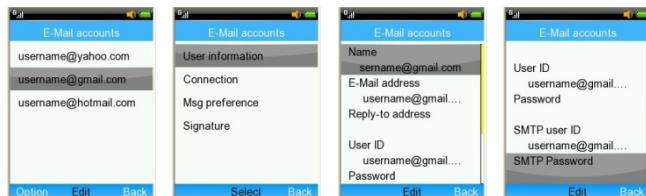

More : Mail box

Set mail box account

1. Enter "Email" , activate "Select" , choose ' Settings'

2. There are 3 default templates, user could add for himself. Take the second one for example, enter "Setting" ,user could add account information. Choose "User information" to edit account information.

Name : type your full name of email

E-Mail address : type your full email address

User ID :: type your full name of email

Password : type keys of your email account

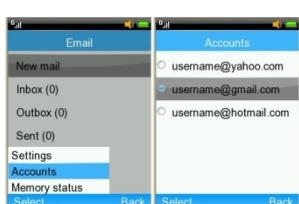

SMTP user ID : type your full name of email

SMTP Password : type keys of your email account

✖ Notice : full name of email should be the same one

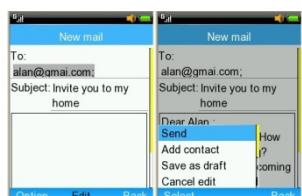

3. Edit and save User information, return to email box accounts, choose "connection". Check "outgoing server" and "Incoming server" if they are right settings. You could find all kinds of setting parameter from related official website.

4. After finish setting, enter "Accounts", choose this email account, you could use email to send/receive emails.

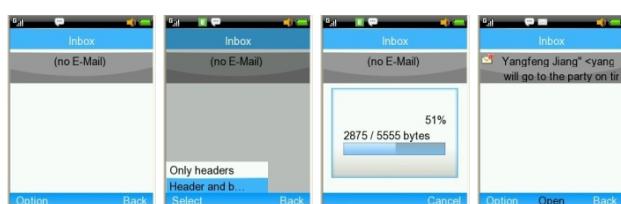

5. Write email

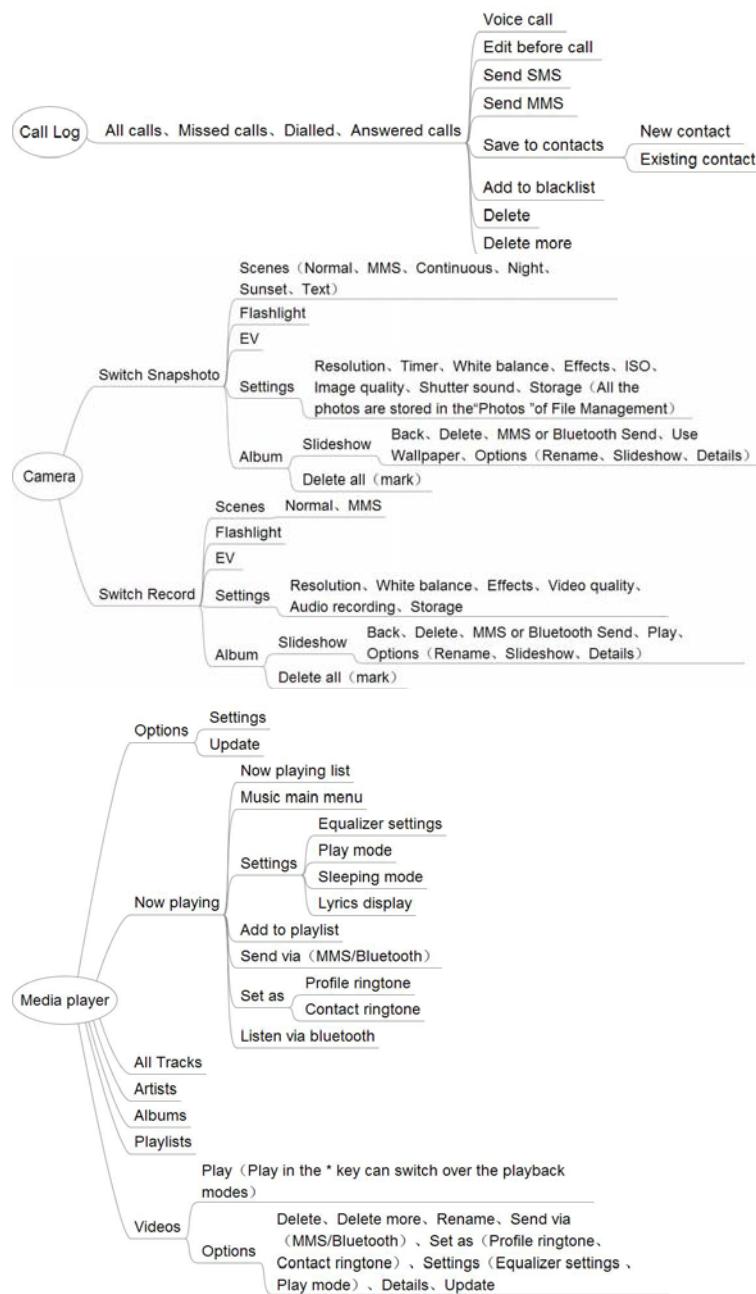

Enter New mail , after edit please press the left key, choose 'Send', the email will be sent out.

6. Receive email

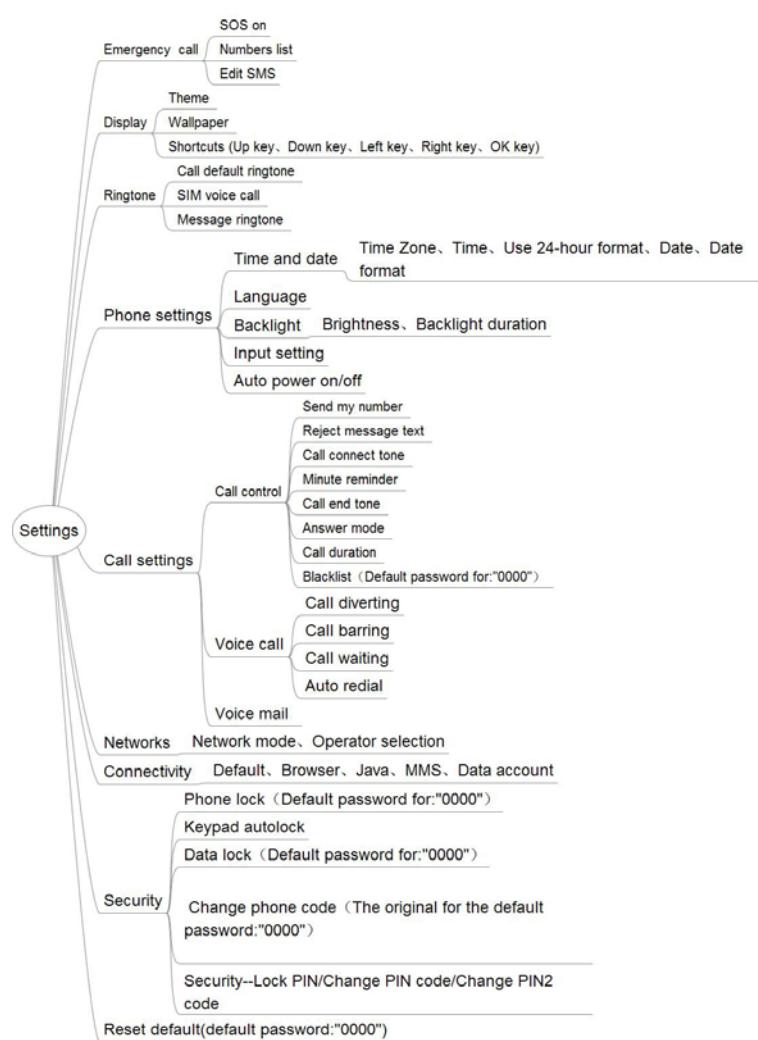

Enter Inbox ,Press the left key to choose 'Retrieve E-Mail' ,choose 'Only headers' or 'Header and body' ,then you could receive email.

✖ Notice: About **Videos player**, as resolution of the mobile phone is 240*320, suggest video code rate is less than 512kbps;
3GP/MP4 Video files could play when speed is about 10 frames.

Download the application
 (Connection network download
 relevant JAR format of the game, or
 can be automatically install format
 matching JAVA games and application
)

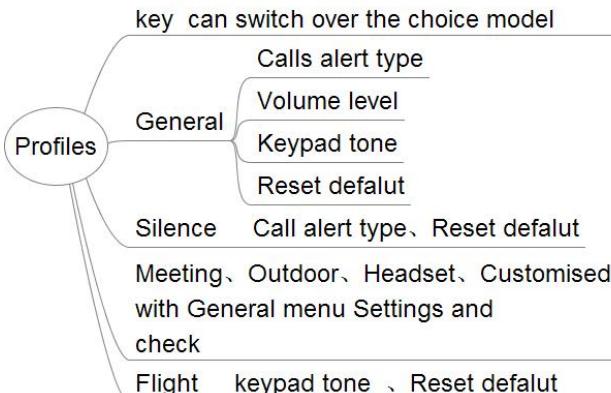

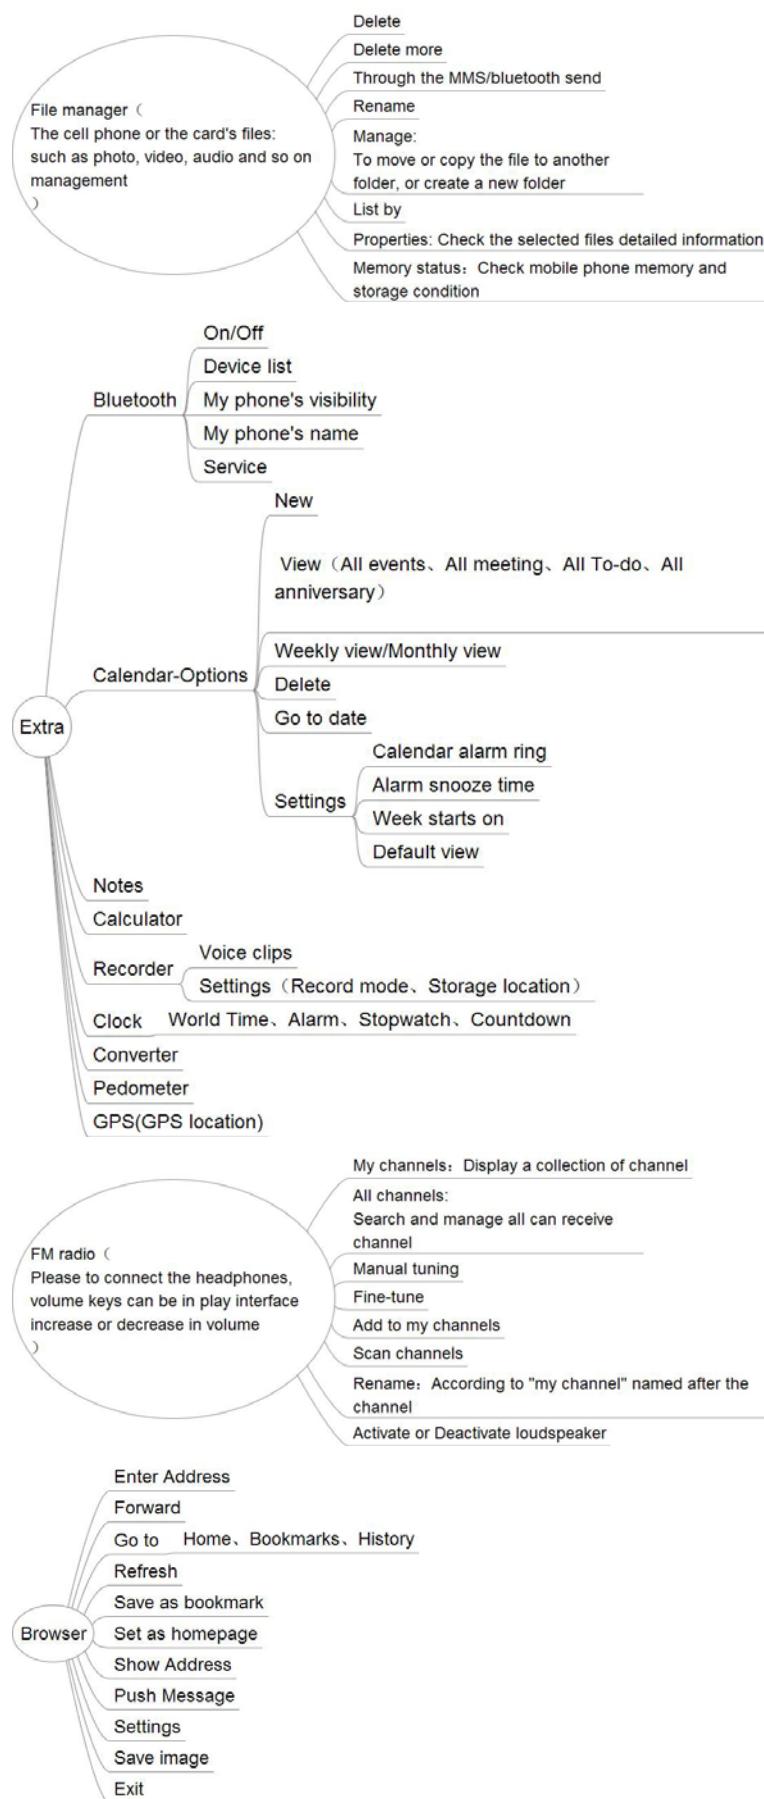

Notice: To launch SOS, you have to set emergency number first, and SOS on, Settings--Emergency call--Number List. When standby, you could start emergency call by long pressing SOS side key.

Activate (In the screen, the icons are different for different user profiles)

Standby state long press the “#”

key can switch over the choice model

FCC Statement

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

SAR Information Statement

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when

tested for use at the ear is **0.444W/Kg** and when worn on the body, as described in this user guide, is **1.30W/Kg**(Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on

FCC ID: **2AACZ-ADVANTAGE1X** Additional information on Specific Absorption Rates (SAR)

can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at <http://www.wow-com.com>. * In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of **15mm** must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
