

## RF Exposure evaluation

Product Description: Bluetooth Stereo Speaker

Model Number: SPK310

FCC ID: 2AAGL-SPK310

According to 447498 D01 General RF Exposure Guidance v05 The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $\leq 50$  mm are determined by:  $[(\text{max. power of channel, including tune-up tolerance, mW})/(\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$  for 1-g SAR and  $\leq 7.5$  for 10-g extremity SAR, where

$f(\text{GHz})$  is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest mW and mm before calculation

According to the test data,

$P_t=2.61\text{dBm}=0.00182\text{W}=1.82\text{mW}$

The result is rounded to one decimal place for comparison

Worse case is as below:  $[2480\text{MHz} - 1.82\text{mW output power}]$

$(1.82\text{mW} / 5\text{mm}) \cdot [\sqrt{2.480(\text{GHz})}] = 0.573 < 3.0$  for 1-g SAR

Then SAR evaluation is not required

**NOTE:** For the maximum power, you can refer FCC test report.
