

## **Technical Description**

Universal USB RFID module which supports standard ISO 15693 transponders. It is exclusively intended for use with industrial PC.

Module uses ASK modulation and is operating in RFID HF 13.56MHz

This module can be connected to any system with USB HOST or OTG support. It is exclusively designed for industrial and embedded applications (e.g. human-machine interface).

There is JST connector with USB data signals which is used as connection point for system. Connection cable USB-A to JST is available as accessory.

On software level it provides virtual serial port for communication (settings and data transmission). Protocol is described in separate file.
