4 Test Requirement

KDB447498 D01 General RF Exposure Guidance v06, Clause 4.3.1(b)

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$

Where

-f(GHz) is the RF channel transmit frequency in GHz

-Power and distance are rounded to the nearest mW and mm before calculation

-The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm, and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm according to 4.1 f) is applied to determine SAR test exclusion.

4.1 Assessment Result

☒ Passed ☐ Not Applicable

Frequency (MHz)	Field Strength (dBuV/m)	calc. Pt (mW)	limit (mW)
915.0	85.59	0.11	1

pt = transmitter output power in watts,

gt = numeric gain of the transmitting antenna (unitless),

E = electric field strength in V/m, --- $10^{((\text{dBuV/m})/20)/10^6}$

d = measurement distance in meters (m) ---3m

Field strength =85.59dBuV/m @3m

Ant gain =0dBi, so gt =1

So pt = $(E \times d)^2 / 30 \times gt = \{ [10^{85.59/20} / 10^6 \times 3]^2 / 30 \times 1 \} \times 1000 \text{ mW} = 0.11 \text{ mW}$

So a SAR test is not required

Note: The exposure evaluation safety distance is 5mm.
