

FCC ID: 2AAVD-G1007E

According to KDB 447498 D01 General RF Exposure Guidance v06, section 4.3.1

At 100 MHz to 6 GHz and for test separation distances \leq 50 mm, the SAR test exclusion threshold is determined according to the following [(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] x [\sqrt{f} (GHz)] \leq 3.0

1. SAR test exclusion threshold Frequency: 2 402MHz (min. separation distances = 5 mm) SAR test evolution thresholds (5 mm) = $2 \times 5 / (n/2, 402) = 0.679$

SAR test exclusion thresholds (5 mm) = $3 \times 5 / (\sqrt{2.402}) = 9.678$ mW

Max. Tune-up Tolerance	SAR Test Exclusion Thresholds
(mW)	(5mm) (mW)
0.00794	9.678

Calculation Value: 1 (mW) / 5 (mm) x $\sqrt{2.402}$ = 0.31

So, Calculation value ≤ 3.0

Remark:

-Max. conducted power 0.00794 (mW) is closet 1 (mW), so 1 (mW) was calculated. -When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

2. Conclusion: No SAR is required.
