

# Operation Description

The RF module SPK-6145-A receiving the signal then modulated through the antenna, the internal circuits of the modules into a single channel differential audio signal, the module of the pin23 to the pin22 output, then the amplified audio signal drives the horn reduction transmitter music through the audio amplifier circuit.

Work Frequency: 2402-2480MHz

Modulation: GFSK, Pi/4 DQPSK, 8DPSK

Power by: DC 3.7V
