

FCC TEST REPORT  
for  
Wintop Electronics Co., Limited  
  
Wireless Keyboard  
Model No.: KB-901B, X300, X300-Black

Prepared for : Wintop Electronics Co., Limited  
Address : Unit 04 7/F, Bright Way Tower 33, Mong Kok RD KL, Hong Kong

Prepared By : Shenzhen Anbotek Compliance Laboratory Limited  
Address : 1/F., Building 1, SEC Industrial Park, No.0409 Qianhai Road,  
Nanshan District, Shenzhen, Guangdong, China  
Tel: (86) 755-26066544  
Fax: (86) 755-26014772

Report Number : R011610812I  
Date of Test : Oct. 28~Nov. 14, 2016  
Date of Report : Nov. 15, 2016

## TEST REPORT

Applicant : Wintop Electronics Co., Limited  
Manufacturer : Shenzhen Wintop Electronics Co., Limited  
EUT : Wireless Keyboard  
Model No. : KB-901B, X300, X300-Black  
Serial No. : N.A.  
Trade Mark : N.A.  
Rating : DC 3V, 20mA

Measurement Procedure Used:

FCC Part15 Subpart C, Paragraph 15.207, 15.249 & 15.209

The device described above is tested by Shenzhen Anbotek Compliance Laboratory Limited to determine the maximum emission levels emanating from the device and the severe levels of the device can endure and its performance criterion. The measurement results are contained in this test report and Shenzhen Anbotek Compliance Laboratory Limited is assumed full of responsibility for the accuracy and completeness of these measurements. Also, this report shows that the EUT (Equipment Under Test) is technically compliant with the FCC Part 15 Subpart C requirements.

This report applies to above tested sample only and shall not be reproduced in part without written approval of Shenzhen Anbotek Compliance Laboratory Limited.

Date of Test : Oct. 28~Nov. 14, 2016

Prepared by :   
(Tested Engineer / Baron Wen)

Reviewer :   
(Project Manager / Dolly Mo)

Approved & Authorized Signer :   
(Manager / Tom Chen)

## 1. GENERAL INFORMATION

### 1.1. Description of Device (EUT)

EUT : Wireless Keyboard

Model Number : KB-901B, X300, X300-Black  
(Note: All samples are the same except the model number and colour, so we prepare “KB-901B” for test only.)

Test Power Supply : DC 3V

Frequency : 2408~2474MHz

No. of Channels : 34 Channels

Antenna Specification : PCB Antenna: -1.55 dBi

Applicant : Wintop Electronics Co., Limited  
Address : Unit 04 7/F, Bright Way Tower 33, Mong Kok RD KL, Hong Kong

Manufacturer : Shenzhen Wintop Electronics Co., Limited  
Address : 2, 3, 4/F, Building 46, Xinhe Road, Shangmugu, Pinghu Town, Longgang District, Shenzhen, China

Factory : Shenzhen Wintop Electronics Co., Limited  
Address : 2, 3, 4/F, Building 46, Xinhe Road, Shangmugu, Pinghu Town, Longgang District, Shenzhen, China

Date of receipt : Oct. 27, 2016

Date of Test : Oct. 28~Nov. 14, 2016

## 1.2. Auxiliary Equipment Used during Test

N/A

## 1.3. Description of Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

### **FCC-Registration No.: 752021**

Shenzhen Anbotek Compliance Laboratory Limited, EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 752021, July 06, 2016.

### **IC-Registration No.: 8058A-1**

Shenzhen Anbotek Compliance Laboratory Limited., EMC Laboratory has been registered and fully described in a report filed with the (IC) Industry Canada. The acceptance letter from the IC is maintained in our files. Registration 8058A, June 13, 2016.

### **Test Location**

All Emissions tests were performed at  
Shenzhen Anbotek Compliance Laboratory Limited. at 1/F., Building 1, SEC Industrial Park, No.0409 Qianhai Road, Nanshan District, Shenzhen, Guangdong, China

## 1.4. Measurement Uncertainty

|                        |   |  |
|------------------------|---|--|
| Radiation Uncertainty  | : | Ur = 4.1 dB (Horizontal)<br>Ur = 4.3 dB (Vertical) |
| Conduction Uncertainty | : | Uc = 3.4dB   |

## 2. TEST METHODOLOGY

The tests documented in this report were performed in accordance with ANSI C63.10: 2013 and FCC Part 15, Paragraph 15.249.

### 2.1. Summary of Test Results

The EUT has been tested according to the following specifications:

| Standard              | Test Type                    | Result | Notes    |
|-----------------------|------------------------------|--------|----------|
| §15.207 (a)           | Conducted Emission           | -      | N/A      |
| §15.205               | Restricted Band of Operation | PASS   | Complies |
| §15.209<br>§15.249(a) | Radiated Emission            | PASS   | Complies |
| §15.215(c)            | 20dB Bandwidth Test          | PASS   | Complies |
| §15.203               | Antenna Requirement          | PASS   | Complies |

Note: This product is low voltage products. It is using the battery as a power source.

### 2.2. Description of Test Modes

The EUT has been tested under operating condition.

Manual control the EUT for staying in continuous transmitting mode.

Channel Low(2408MHz), Channel Middle(2440MHz) and Channel High(2474MHz) are chosen for the final testing.

### 3. Test Procedure

**GENERAL:** This report shall NOT be reproduced except in full without the written approval of Shenzhen Anbotek Compliance Laboratory Limited. The EUT was transmitting a test signal during the testing.

**RADIATION INTERFERENCE:** The test procedure used was ANSI STANDARD C63.10-2013 using a spectrum analyzer with a pre-selector. The analyzer was calibrated in dB above a microvolt at the output of the antenna. The resolution bandwidth was 100KHz and the video bandwidth was 300KHz up to 1.0GHz and 1.0MHz with a video BW of 3.0MHz above 1.0GHz. The ambient temperature of the EUT was 74.3oF with a humidity of 69%.

**FORMULA OF CONVERSION FACTORS:** The Field Strength at 3m was established by adding the meter reading of the spectrum analyzer (which is set to read in units of dBuV) to the antenna correction factor supplied by the antenna manufacturer. The antenna correction factors are stated in terms of dB. The gain of the Preselector was accounted for in the Spectrum Analyzer Meter Reading.

**Example:**

Freq (MHz) METER READING + ACF = FS  
20 dBuV + 10.36 dB = 30.36 dBuV/m @ 3m

**ANSI STANDARD C63.10-2013 10.1.7 MEASUREMENT PROCEDURES:** The EUT was placed on a table 80 cm high and with dimensions of 1m by 1.5m. The EUT was placed in the center of the table (1.5m side). The table used for radiated measurements is capable of continuous rotation.

When an emission was found, the table was rotated to produce the maximum signal strength. At this point, the antenna was raised and lowered from 1m to 4m. The antenna was placed in both the horizontal and vertical planes.

## 4. Radiation Interference

### 4.1. Requirements (15.249, 15.209):

| FIELD STRENGTH<br>of Fundamental:<br>@3M | FIELD STRENGTH<br>of Harmonics | S15.209       |           |
|--|--------------------------------|---------------|-----------|
| 902-928 MHZ                              |                                | 30 - 88 MHz   | 40 dBuV/m |
| 2.4-2.4835 GHz                           |                                | 88 - 216 MHz  | 43.5      |
| 94 dB $\mu$ V/m @3m                      | 54 dB $\mu$ V/m @3m            | 216 - 960 MHz | 46        |
|  |                                | ABOVE 960 MHz | 54dBuV/m  |

Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in 15.209, whichever is the lesser attenuation.

### 4.2. Test Procedure

For below 1GHz, the EUT is placed on a turn table which is 0.8 meter high above the ground. For above 1GHz, the EUT is placed on a turn table which is 1.5 meter high above the ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level. The EUT is set 3 meters away from the receiving antenna which is mounted on a antenna tower. The antenna can be moved up and down from 1 to 4 meters to find out the maximum emission level. Both horizontal and vertical polarization of the antenna are set on test.

All readings from 30MHz to 1GHz are quasi-peak values with a resolution bandwidth of 120kHz. All reading are above 1GHz, peak & average values with a resolution bandwidth of 1MHz. The EUT is tested in 9\*6\*6 Chamber. The device is evaluated in xyz orientation. The test results are listed in Section 4.3.

### 4.3 Test Equipment

| Item | Equipment                      | Manufacturer            | Model No.    | Serial No.    | Last Cal.     | Cal. Interval |

**NOTE: “ --- ” in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured. The results of different modulations are the same.**

## 5. Bandedge

### 5.1. Requirements (15.249):

The field strength of any emissions appearing outside the band edges and up to 10 kHz above and below the band edges shall be attenuated at least 50 dB below the level of the carrier or to the general limits of 15.249.

### 5.2. Test Procedure

The EUT is placed on a turn table which is 1.5 meter high above the ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level. The EUT is set 3 meters away from the receiving antenna which is mounted on a antenna tower. The antenna can be moved up and down from 1 to 4 meters to find out the maximum emission level. Both horizontal and vertical polarization of the antenna are set on test. The device is evaluated in xyz orientation.

#### Test Equipment

Same as the equipment listed in 5.3.

### 5.3. Test Configuration:

30M to 1G emissions:

1G to 40G emissions:

#### 5.4. Test Results

Pass.

Please refer the following plot. Only the worst case (x orientation).

## 6. Occupied Bandwidth

### 6.1. Requirements :

According to 15.215 (c), intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§15.217 through 15.257 and in Subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated. The requirement to contain the designated bandwidth of the emission within the specified frequency band includes the effects from frequency sweeping, frequency hopping and other modulation techniques that may be employed as well as the frequency stability of the transmitter over expected variations in temperature and supply voltage. If a frequency stability is not specified in the regulations, it is recommended that the fundamental emission be kept within at least the central 80% of the permitted band in order to minimize the possibility of out-of-band operation.

### 6.2. Test SET-UP

### 6.3 Test Equipment

Same as the equipment listed in 4.3.

### 6.4. Test Results

Pass.

Please refer the following plot.

20dB Down:

## 7. ANTENNA APPLICATION

### 7.1. Antenna requirement

The EUT'S antenna is met the requirement of FCC part 15C section 15.203.

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited. This requirement does not apply to carrier current devices or to devices operated under the provisions of §15.211, §15.213, §15.217, §15.219, or §15.221. Further, this requirement does not apply to intentional radiators that must be professionally installed, such as perimeter protection systems and some field disturbance sensors, or to other intentional radiators which, in accordance with §15.31(d), must be measured at the installation site. However, the installer shall be responsible for ensuring that the proper antenna is employed so that the limits in this part are not exceeded.

### 7.2. Result

The EUT's antenna used a PCB antenna which is permanently attached, The antenna's gain is -1.55dBi and meets the requirement.
