TEST RESULT SUMMARY

FCC Part 15 Subpart C Section 15.231
IC RSS-210 Issue 8
Amendment 1: Feb. 2015
Updated: May 2015
IC RSS-Gen Issue 4

MANUFACTURER'S NAME	Cinch Systems Inc 12075 43rd Street NE Suite 300 St Michael MN 55376 USA
PRODUCT NAME	Mini Door / Window Sensor
MODEL NUMBER(S) TESTED	RF-MDWS-ITI-S, RF-MDWSX-ITI-S
SERIAL NUMBER(S) TESTED	24EA3, 5EX2016
PRODUCT DESCRIPTION	Micro Door Window Sensors with 319.5 MHz transmitters
TEST REPORT NUMBER	NC72118189.1
TEST DATE(S)	27-30 June 2016

TÜV SÜD America Inc, as an independent testing laboratory, declares that the equipment tested as specified above conforms to the applicable EMC requirements of FCC Part 15 Subpart C Section 15.231 “Periodic operation in the band 40.66–40.70 MHz and above 70 MHz.” and Industry Canada RSS-210 Issue 8 “Licence-exempt Radio Apparatus (All Frequency Bands): Category I Equipment” and Industry Canada RSS-Gen Issue 4 “General Requirements and Information for the Certification of Radio Apparatus”.

It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical characteristics. Any modifications necessary for compliance made during testing on the above mentioned date(s) must be implemented in all production units for compliance to be maintained.

Issue Date: 29 July 2016

EMC TEST REPORT

Test Report No.	**NC72118189.1** Date of issue: 29 July 2016
Product Names	Mini Door / Window Sensor
Model(s) Tested	RF-MDWS-ITI-S, RF-MDWSX-ITI-S
Serial No(s) Tested	24EA3, 5EX2016
Product Description	Micro Door Window Sensor & Micro DWS-External contact (319.5 MHz)
Manufacturer	Cinch Systems Inc 12075 43rd Street NE Suite 300 St Michael MN 55376
Issuing Laboratory	TÜV SÜD America Inc USA 1775 Old Highway 8 NW, Suite 104 New Brighton MN 55112 - 1891 Phone: 651-631-2487 / Fax: 651-638-0285
Test Result	■ **Positive** ☐ **Negative**

TÜV SÜD America Inc reports apply only to the specific samples tested under stated test conditions. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. TÜV SÜD America Inc shall have no liability for any deductions, inferences or generalizations drawn by the client or others from TÜV SÜD America Inc issued reports.

This report is the confidential property of the client. As a mutual protection to our clients, the public and ourselves, extracts from the test report shall not be reproduced except in full without our written approval. TÜV SÜD America's New Brighton and Taylors Falls Labs maintain A2LA accreditation to ISO/IEC 17025 for the specific tests listed in A2LA Certificate #2955.11 as an Electrical Testing Laboratory.

TÜV SÜD America Inc and its professional staff hold government and professional organization certifications and are members of AAMI, ACIL, AEA, ANSI, IEEE, NARTE, and VCCI.

REVISION RECORD

LAB ACCREDITATION:
TÜV SÜD America's New Brighton and Taylors Falls Labs maintain A2LA accreditation to ISO/IEC 17025 for the specific tests listed in A2LA Certificate #2955.11 as Electrical Testing Laboratories, and are recognized by the National RRA under Phase I of the APEC Tel MRA, Identification Number US0080. These Labs are located at the following addresses:

Main Location:	1775 Old Highway 8 NW, Suite 104 New Brighton MN 55112-1891 USA
Satellite Location:	19333 Wild Mountain Road Taylors Falls MN 55084 USA

EMC TEST REGULATIONS:
The tests were performed according to the following regulations:
FCC Part 15 Subpart C §15.231
IC RSS-210 Issue 8
IC RSS-Gen Issue 4

ENVIRONMENTAL CONDITIONS IN THE LAB

	Actual
Temperature:	: 21-23°C
Atmospheric pressure	: 99kPa
Relative Humidity	: 46-49%

POWER SUPPLY UTILIZED

Power supply system	: 3 VDC

TEST EQUIPMENT
All measurement instrumentation is traceable to the National Institute of Standards and Technology and is calibrated according to internal procedure.

MEASUREMENT UNCERTAINTY
The test system for conducted emissions is defined as the LISN, tuned receiver or spectrum analyzer, and coaxial cable. The test system has a measurement uncertainty of ±1.8 dB. The test system for radiated emissions is defined as the antenna, the pre-amplifier, the spectrum analyzer and the coaxial cable. The test system has a measurement uncertainty of ±4.8 dB. All measurement instrumentation is traceable to the National Institute of Standards and Technology and is calibrated according to internal procedure.

SIGN EXPLANATIONS
☐ - not applicable
■ - applicable

Radiated Emissions 30 - 3200 MHz
FCC 15.231(b), IC RSS-210 A1.1

Test summary
The requirements are: ■ - MET ☐ - NOT MET
Testing was performed in accordance with the test procedure of ANSI C63.10 2013, clause 6.3.

Test location
Taylors Falls Lab Large Test Site (Open Area Test Site)

Test distance
3 meters

Limit with 319.5 MHz fundamental and 3 meter distance

Detector	Field strength fundamental (μV/m)	Field strength Spurious (μV/m)
Average	6229	622.9
Peak	62291	6229

The emission limits shown in the above table are based on measurements employing a CISPR average detector. When average radiated emission measurements are specified in this part, including average emission measurements below 1000 MHz, there also is a limit on the peak level of the radio frequency emissions. Unless otherwise specified, *e.g.*, see §§ 15.250, 15.252, 15.255, and 15.509–15.519, the limit on peak radio frequency emissions is 20 dB above the maximum permitted average emission limit applicable to the equipment under test. Further, compliance with the provisions of §15.205 shall be demonstrated using the measurement instrumentation specified in that section. Radiated emissions from the EUT are measured in the frequency range of 30 to 1000 MHz using a spectrum analyzer or receiver and appropriate broadband linearly polarized antennas. Measurements between 30 MHz and 1000 MHz are made with a 120 kHz / 6 dB bandwidth and average/peak detection and measurements above 1000 MHz are made with a 1 MHz RBW/VBW / 6 dB bandwidth and peak detection, 1 MHz RBW/ 10 Hz VBW for average detection. Table top equipment is placed on a non-conductive support 80 cm above the ground plane. Interface cables that are closer than 40 centimeters to the ground plane are bundled in the center in a serpentine fashion so they are at least 40 centimeters from the ground plane. Cables to simulators/testers (if used in this test) are routed through the center of the table and to a screen room located outside the test area. The antenna is positioned 3, 10 or 30 meters horizontally from the EUT. To locate maximum emissions from the test sample the antenna is varied in height from 1 to 4 meters, measurement scans are made with both horizontal and vertical antenna polarizations and the EUT is rotated 360 degrees. When performing measurements at a distance other than that specified, the results shall be extrapolated to the specified distance using an extrapolation factor of 20 dB / decade (inverse linear-distance for field strength measurements).

Periodic operation
FCC 15.231(a), IC RSS-210 A1.1.1

Test summary
The requirements are: ■ - MET ☐ - NOT MET

Manufacturer declared operation mode.

Test Limit 15.231(a);
(2) A transmitter activated automatically shall cease transmission within 5 seconds after activation.

"Whenever the transmitter is activated automatically it will transmit 8 packets of 23.6 msec in length spaced by 130 msec. Transmission cease after 1.1 seconds."

(3) Periodic transmissions at regular predetermined intervals are not permitted. However, polling or supervision transmissions, including data, to determine system integrity of transmitters used in security or safety applications are allowed if the total duration of transmissions does not exceed more than two seconds per hour for each transmitter. There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.

"The supervisory periodic transmissions are the four automatic transmissions noted above. They occur once per hour, for a total hourly transmission time of 94.4 msec."

(4) Intentional radiators which are employed for radio control purposes during emergencies involving fire, security, and safety of life, when activated to signal an alarm, may operate during the pendency of the alarm condition

"The transmitter is limited to reporting devices opening and closing. Other than the initial status change condition report there are no repeat transmissions other than the hourly supervisory transmissions."

(5) Transmission of set-up information for security systems may exceed the transmission duration limits in paragraphs (a)(1) and (a)(2) of this section, provided such transmissions are under the control of a professional installer and do not exceed ten seconds after a manually operated switch is released or a transmitter is activated automatically. Such set-up information may include data.

"Set up information cannot exceed 16 23.6 msec packets, spaced by 130 msec. Transmissions cease after 2.2 seconds."

TÜV SÜD AMERICA INC 1775 Old Hwy 8 NW, Suite 104 New Brighton MN 55112-1891 Tel: (651) 638-0297 Fax: (651) 638-0298 Rev. 113006

Equipment Under Test (EUT) Test Operation Mode:

The device under test was operated under the following conditions during immunity testing :

☐ - Standby

☐ - Test program (H - Pattern)

☐ - Test program (color bar)

☐ - Test program (customer specific)

☐ - Practice operation

■ - Sends continuous packets- carrier with modulation

Configuration of the device under test:

■ - See Appendix A and test setup photos

☐ - See Product Information Form(s) in Appendix B

TÜV SÜD AMERICA INC 1775 Old Hwy 8 NW, Suite 104 New Brighton MN 55112-1891 Tel: (651) 638-0297 Fax: (651) 638-0298 Rev. 113006

DEVIATIONS FROM STANDARD:
None.

GENERAL REMARKS:
None

Modifications required to pass:
■ None
☐ As indicated on the data sheet(s)

Test Specification Deviations: Additions to or Exclusions from:
■ None
☐ As indicated in the Test Plan

SUMMARY:
The requirements according to the technical regulations are
■ - met and the device under test does fulfill the general approval requirements.
☐ - **not** met and the device under test does **not** fulfill the general approval requirements..

EUT Received Date: 27 June 2016
Condition of EUT: Normal
Testing Start Date: 27 June 2016
Testing End Date: 30 June 2016

TÜV SÜD AMERICA INC

Approved by:
Joel T Schneider
Senior EMC Engineer

Tested by:
Greg Jakubowski
Senior EMC Technician

PLEASE COMPLETE THIS DOCUMENT IN FULL, ENTERING N/A IF THE FIELD IS NOT APPLICABLE. IF TESTING RESULTS IN MODIFICATIONS TO THE EQUIPMENT, PLEASE SUBMIT A REVISED VERSION OF THIS DOCUMENT INDICATING THOSE MODIFICATIONS.
NOTE: This information will be input into your test report as shown below.

Company:	Cinch Systems Inc.		
Address: (*incl City, State, ZIP*)	12075 43rd St NE Suite 300		
	St Michael MN 55376		
Contact:	Joel Christianson	Position:	CEO
Phone - Office:	763-497-1064	Cell:	
E-mail Address:	Jeol.christianson@cinchsystems.com	Form completion date:	7-11-26

General Equipment Description -- *NOTE: This info will be input into your test report as shown below.*			
EUT Description	Mini door/window sensors		
EUT Name			
Model No.:	RF-MDWS-ITI-S	Serial No.:	
Product Options:			
Configurations to be tested:			

Equipment Modification (*If applicable, indicate modifications since EUT was last tested. If modifications are made during this testing, submit revised version of this document after testing is complete.)*	
Modifications since last test:	
Modifications made during test:	

EUT Specifications and Requirements

Length: _____ Width: _____ Height: _____ Weight: _____

Power Requirements

Regulations require testing to be performed at typical power ratings in the countries of intended use. (i.e., European power is typically 230 VAC 50 Hz or 400 VAC 50 Hz, single and three phase, respectively)

Voltage: 3.0 V (If battery powered, make sure battery life is sufficient to complete testing.)

# of Phases: _____

Current (Amps/phase(max)): 25mA Current (Amps/phase(nominal)): 18mA

Other _____

Oscillator Frequencies (Please list any and all internally generated frequencies of the Product - clocks, CPUs, etc. ***The highest frequency will determine the upper frequency range to be tested***.)

Frequency (kHz, MHz, GHz)	***Description of Use***
9.983438 MHz	Cristal Oscillator use for RF wireless security sensor for modulations

Typical Installation and/or Operating Environment (ie. Hospital, Small Business, Industrial/Factory, etc.)
Mini Door/window Home security sensor

Test Objective(s):
Please indicate (x) the tests to be performed, entering the applicable standard(s) where noted.

___	EMC Directive	Std(s):
___	RED Directive	Std(s):
___	Medical Device Directive	Std(s):
___	Vehicle	Std(s):
___	Ag Directive	Std(s):

Countries Needed ***(common standards shown below - "x" those applicable)*:**

X	FCC (USA):	Class	___ A (Industrial)	X B (Residential)	
___	VCCI (Japan):	Class	___ A (Industrial)	___ B (Residential)	
___	BSMI (Taiwan):	Class	___ A (Industrial)	___ B (Residential)	(Separate Report required)
___	Canada:	Class	___ A (Industrial)	___ B (Residential)	
___	Australia	Class	___ A (Industrial)	___ B (Residential)	
___	Korea:	Std(s):			
___	Other:	Std(s):			

Other Special Requirements (i.e. Water access, compressed air, etc)
N/A

Emissions Testing Operating Modes.
Describe what the product is doing during testing. Describe how the product will be exercised during emissions testing and what software is running, if any. If testing multiple operating modes, please describe each one. If testing only one operating mode out of several, please describe why it is considered the worst-case. In addition to operating modes, all ports must be populated to achieve the worst case condition.

Operating Mode 1.	Transmit continuous packet
Operating Mode 2.	

Immunity Testing Operating Modes.
If different than operating mode during emissions testing, describe what the product is doing during test. Describe how the product will be exercised during immunity testing and what software is running, if any. If testing multiple operating modes, please describe each one. If testing only one operating mode out of several, please describe why it is considered the worst-case. In addition to operating modes, all ports must be populated to achieve the worst case condition.

Cycle Time of Product:	
Operating Mode 1.	
Operating Mode 2.

Immunity Testing Performance Criteria and Pass/Fail Criteria.
For immunity testing, it is very important that performance criteria be defined. Please describe what parameters can be monitored, as well as their tolerances, to ensure that the product is operating properly during the immunity testing. Explain what the test operator should monitor during the testing to determine if the product is operating within specified parameters.

N/A

EUT Interface Ports and Cables
In order to verify all configurations in the report properly, it is generally necessary to populate all ports on the equipment under test. If any ports are to remain unpopulated, the justification for leaving them unpopulated should be noted. (e.g., "diagnostic use only"). Please note that any unpopulated port will be documented in the report, which may exclude it from the scope of compliance as detailed in that report. Please provide as many cables as possible for testing adding rows as needed. ***The cable length should represent the maximum length of cable that you specify that can be attached to the product in your instruction manual. TUV SUD AMERICA requires a minimum of 15 feet that will connect to any support equipment that you do not want included in the test field.***

Type	*Length tested (in meters)*	*Qty*	*Shielding*		
			Yes	*No*	*Type*
***EXAMPLE**: Ethernet*	*6*	*2*			

Equipment Under Test (EUT) System Components
List and describe all major components which are part of the EUT. For FCC & Taiwan testing a minimum configuration is required.

Description	*Model #*	*Serial #*	*FCC ID #*

Customer Supplied Support Equipment
List and describe all support equipment which is not part of the EUT but that you are providing to exercise and monitor your product. Support equipment is defined as only needed for testing and is not part of the final product to be delivered to the customer (i.e. peripherals, simulators, etc) This information is required for FCC & Taiwan testing.

Critical EMI Components (Capacitors, ferrites, etc.)

Description	*Manufacturer*	*Part # or Value*	*Qty*	*Component # / Location*
