Key to Results			
 = Complied  = Did not comply			

Note(s):

1. The measurement was performed to assist in the calculation of the level of average output power, power spectral density and emissions as the EUT employs pulsed operation.
2. The frequency stability is sufficient to ensure that the signal remains in the allocated bands under all operational conditions, as stated in the user manual.
3. Transmit Power Control was not tested as the maximum EIRP is less than 500 mW (27 dBm).

1.4 Deviations from the Test Specification

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specifications identified above.

2 Summary of Testing

2.1 Facilities and Accreditation

The test site and measurement facilities used to collect data are located at Unit 3 Horizon, Wade Road, Kingsland Business Park, Basingstoke, Hampshire, RG24 8AH, United Kingdom. The following table identifies which facilities were utilised for radiated emission measurements documented in this report. Specific facilities are also identified in the test results sections.

UL International (UK) Ltd is accredited by the United Kingdom Accreditation Service (UKAS). UKAS is one of the signatories to the International Laboratory Accreditation Co-operation (ILAC) Arrangement for the mutual recognition of test reports. The tests reported herein have been performed in accordance with its terms of accreditation.

2.2 Methods and Procedures

2.3 Calibration and Uncertainty

Measuring Instrument Calibration

In accordance with UKAS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

Measurement Uncertainty & Decision Rule

Overview

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

Decision Rule

Measurement system instrumentation shall be used with an accuracy specification meeting the accuracy specification limits according to IEC/IECEE OD-5014.

As applicable, unless specified otherwise in the quotation, the compliance "Decision Rule" is based on Simple Acceptance. If the measured value is on the limit, the result is defined as a pass. In this case the risk of a false positive is 50%. For further information regarding risk assessment refer to ILAC G8:09/2019.

Measurement Uncertainty

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document "approximately" is interpreted as meaning "effectively" or "for most practical purposes".

Measurement Type	Range	Confidence Level (%)	Calculated Uncertainty
Duty Cycle	5.15 GHz to 5.850 GHz	95%	±1.39 %
99% Emission Bandwidth	5.15 GHz to 5.850 GHz	95%	±3.92 %
26 dB Emission Bandwidth	5.15 GHz to 5.850 GHz	95%	±4.59 %
Minimum 6 dB Emission Bandwidth	5.15 GHz to 5.850 GHz	95%	±4.59 %
Maximum Conducted Output Power (Fast Power Sensor)	5.15 GHz to 5.850 GHz	95%	±0.58 dB
Maximum Conducted Output Power (Spectrum Analyser)	5.15 GHz to 5.850 GHz	95%	±1.13 dB
Maximum Power Spectral Density	5.15 GHz to 5.850 GHz	95%	±1.13 dB
Radiated Spurious Emissions	9 kHz to 30 MHz	95%	±5.32 dB
Radiated Spurious Emissions	30 MHz to 1 GHz	95%	±3.30 dB
Radiated Spurious Emissions	1 GHz to 40 GHz	95%	±3.16 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.

Operating Modes

The EUT was tested in the following operating mode(s):

- Continuously transmitting with a modulated carrier at maximum power on the bottom, middle and top channels as required using the supported data rates/modulation types.

Configuration and Peripherals

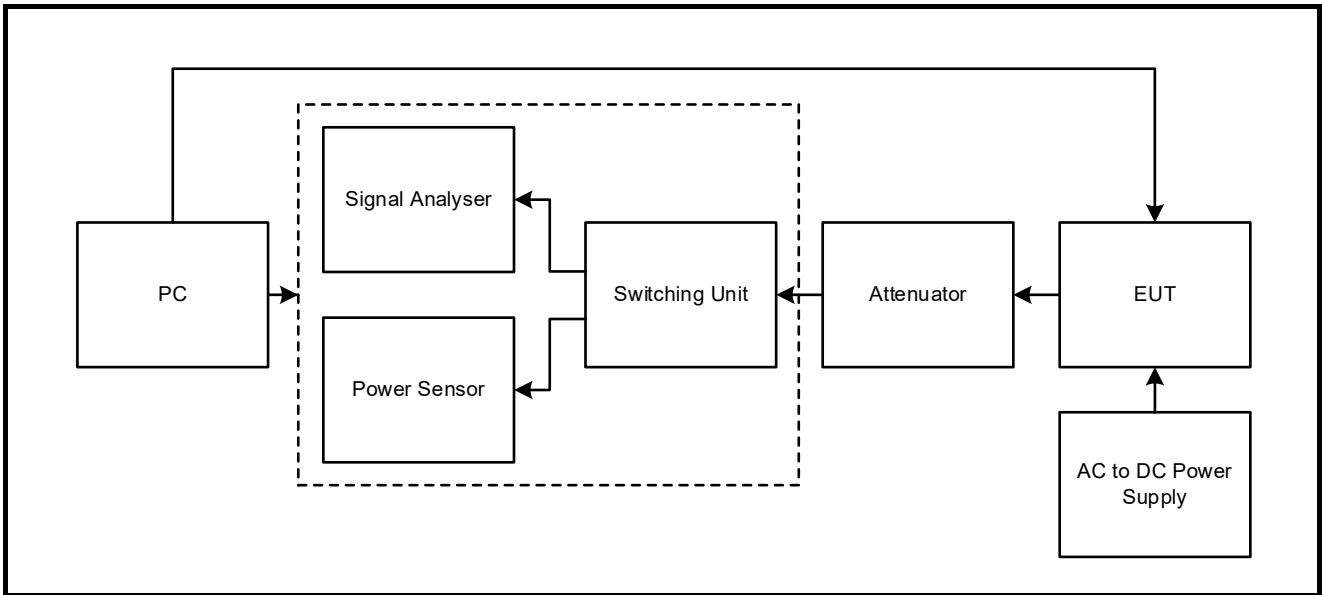

The EUT was tested in the following configuration(s):

- The customer's test application and supplied instructions were used to place the EUT into WLAN test mode. The supplied commands were entered into the console menu on the EUT. Test commands stated in text file located on the /home/pi drive of the EUT were used to configure the EUT to enable a continuous transmission and to select the test channels and data rate as required.
- The customer supplied a U.FL RF cable with the EUT in order to perform conducted measurements. The additional path loss was included in any path loss calculations.
- The EUT was powered from an AC to DC USB-C Power Supply. The input was connected to a 120 VAC 60 Hz single phase mains supply.
- The customer declared the following data rates to be used for all measurements.
 - 802.11a SISO - BPSK / 6 Mbps
 - 802.11n HT20 / SISO – BPSK / MCS0
 - 802.11n HT40 / SISO – BPSK / MCS0
 - 802.11ac VHT80 / SISO – BPSK / MCS0
- Transmitter radiated spurious emissions tests were performed with the EUT in the worst-case orientation with respect to emissions. The Ethernet port was terminated into a test laptop via an Ethernet cable. The test laptop was placed in the antechamber. The 2 HDMI ports and 4 USB ports were terminated into a docking station via HDMI and USB cables. The docking station was placed under the turntable.

4 Antenna Port Test Results

4.1 Transmitter 26 dB and 99% Emission Bandwidth

Test Summary:

Test Engineer:	Luis Pazos Perez	Test Date:	08 August 2023
Test Sample Serial Number:	C9		

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	50

Note(s):

1. 26 dB Emission Bandwidth measurements were performed in accordance with ANSI C63.10 Section 12.4.1. 99% Occupied Bandwidth measurements were performed in accordance with ANSI C63.10 Section 12.4.2.
2. The signal analyser was connected to the RF port on the EUT using an RF switch, suitable attenuation and RF cables. An RF level offset was entered on the signal analyser to compensate for the loss of the switch, attenuators and RF cables.
