### **FCC TEST REPORT**

| Application No:          | HR/2020/30023  |
|--------------------------|--|
| Applicant:               | Reliance Communications, LLC   |
| Address of Applicant     | 91 Colin Drive, Unit 1 Holbrook, NY 11741  |
| Manufacturer:            | Unimaxcomm   |
| Address of Manufacturer: | Room 602, Floor 6th, Building B, Software Park T3,Hi-Tech Park South,<br>Nanshan District, Shenzhen, P.R. China 518057 |
| EUT Description:         | Smart phone  |
| Model No.:               | RC545L   |
| Trade Mark:              | Orbic  |
| FCC ID:                  | 2ABGH-RC545L   |
| Test Method:             | FCC KDB 971168 D01 Power Meas License Digital Systems V03r01<br>C63.26 (2015)  |
| Date of Receipt:         | 2020/4/16  |
| Date of Test:            | 2020/4/16 to 2020/6/3  |
| Date of Issue:           | 2020/7/13  |
| Test Result:             | PASS *   |

In the configuration tested, the EUT detailed in this report complied with the standards specified above.

## 2 Test Summary

### 2.1 GSM850/UMTS Band 5 & LTE Band 5

| Test Item  | FCC Rule No.          | Requirements  | Test Result                | Verdict |
|--|-----------------------|---|----------------------------|---------|
| Effective (Isotropic)<br>Radiated Power<br>Output Data | §2.1046,<br>§22.913   | FCC: ERP ≤ 7 W  | Section 1 of<br>Appendix B | Pass    |
| Peak-Average<br>Ratio                                  |                       | Limit≤13 dB   | Section 2 of<br>Appendix B | Pass    |
| Modulation<br>Characteristics                          | §2.1047               | Digital modulation  | Section 3 of<br>Appendix B | Pass    |
| Bandwidth  | §2.1049               | OBW: No limit.<br>EBW: No limit.  | Section 4 of<br>Appendix B | Pass    |
| Band Edges<br>Compliance                               | §2.1051,<br>§22.917   | ≤ -13 dBm/1%*EBW, in 1 MHz bands<br>immediately outside and adjacent to the<br>frequency block.               | Section 5 of<br>Appendix B | Pass    |
| Spurious Emission<br>at Antenna<br>Terminals           | §2.1051,<br>§22.917   | FCC: ≤ -13 dBm/100 kHz, from 9 kHz to<br>10th harmonics but outside authorized<br>operating frequency ranges. | Section 6 of<br>Appendix B | Pass    |
| Field Strength of Spurious Radiation                   | §2.1053,<br>§22.917   | FCC: ≤ -13 dBm/100 kHz.   | Section 7 of<br>Appendix B | Pass    |
| Frequency Stability                                    | §2.1055,<br>§22.355   | ≤ ±2.5ppm.  | Section 8 of<br>Appendix B | Pass    |
| Remark: For the verd                                   | lict, the "N/A" denot | es "not applicable", the "N/T" denotes "not te  | sted".                     |         |

### 2.2 GSM 1900/UMTS Band 2 /LTE Band 2

| Test Item  | FCC Rule No.        | Requirements  | Test Result                | Verdict |
|--|---------------------|---|----------------------------|---------|
| Effective (Isotropic)<br>Radiated Power<br>Output Data | §2.1046,<br>§24.232 | EIRP ≤ 2 W  | Section 1 of<br>Appendix B | Pass    |
| Peak-Average<br>Ratio                                  | §2.1046,<br>§24.232 | Limit≤13 dB   | Section 2 of<br>Appendix B | Pass    |
| Modulation<br>Characteristics                          | §2.1047             | Digital modulation  | Section 3 of<br>Appendix B | Pass    |
| Bandwidth  | §2.1049             | OBW: No limit.<br>EBW: No limit.  | Section 4 of<br>Appendix B | Pass    |
| Band Edges<br>Compliance                               | §2.1051,<br>§24.238 | ≤ -13 dBm/1%*EBW, in 1 MHz bands<br>immediately outside and adjacent to the<br>frequency block.   | Section 5 of<br>Appendix B | Pass    |
| Spurious Emission<br>at Antenna<br>Terminals           | §2.1051,<br>§24.238 | <ul> <li>≤ -13 dBm/1 MHz, from 9 kHz to 10<sup>th</sup><br/>harmonics but outside authorized<br/>operating frequency ranges.</li> </ul> | Section 6 of<br>Appendix B | Pass    |
| Field Strength of<br>Spurious Radiation                | §2.1053,<br>§24.238 | ≤ -13 dBm/1 MHz.  | Section 7 of<br>Appendix B | Pass    |
| Frequency Stability                                    | §2.1055,<br>§24.235 | ≤ ±2.5 ppm.   | Section 8 of<br>Appendix B | Pass    |

## **3** General Information

#### 3.1 Client Information

| Applicant:               | Reliance Communications, LLC  |  |
|--------------------------|---|--|
| Address of Applicant:    | 91 Colin Drive, Unit 1 Holbrook, NY 11741   |  |
| Manufacturer:            | Unimaxcomm  |  |
| Address of Manufacturer: | Room 602, Floor 6th, Building B, Software Park T3,Hi-Tech Park South, Nanshan District, Shenzhen, P.R. China 518057 |  |

### 3.2 Test Location

| Company:   | SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen Branch                             |
|------------|---|
| Address:   | No. 1 Workshop, M-10, Middle section, Science & Technology Park, Shenzhen, Guangdong, China |
| Post code: | 518057  |
| Telephone: | +86 (0) 755 2601 2053   |
| Fax:       | +86 (0) 755 2671 0594   |
| E-mail:    | ee.shenzhen@sgs.com   |

### 3.3 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### • CNAS (No. CNAS L2929)

CNAS has accredited SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen Branch EMC Lab to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.

#### • A2LA (Certificate No. 3816.01)

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory is accredited by the American Association for Laboratory Accreditation(A2LA). Certificate No. 3816.01.

#### • VCCI

The 3m Fully-anechoic chamber for above 1GHz, 10m Semi-anechoic chamber for below 1GHz, Shielded Room for Mains Port Conducted Interference Measurement and Telecommunication Port Conducted Interference Measurement of SGS-CSTC Standards Technical Services Co., Ltd. have been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: G-20026, R-14188, C-12383 and T-11153 respectively.

#### • FCC – Designation Number: CN1178

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory has been recognized as an accredited testing laboratory.

Designation Number: CN1178. Test Firm Registration Number: 406779.

#### • Industry Canada (IC)

Two 3m Semi-anechoic chambers and the 10m Semi-anechoic chamber of SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen Branch EMC Lab have been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 4620C-1, 4620C-2, 4620C-3.

### 3.4 General Description of EUT

| EUT Description::    | Smart phone   |  |  |  |
|----------------------|---|--|--|--|
| Model No.:           | RC545L  |  |  |  |
| Trade Mark:          | Orbic   |  |  |  |
| Hardware Version:    | V1.1  |  |  |  |
| Software Version:    | ORB545L_V.1.0.7_BVZPP                               |  |  |  |
| Sample Type:         | $\boxtimes$ Portable Device, $\square$ Module       |  |  |  |
| Antenna Type:        | □ External, ⊠ Integrated                            |  |  |  |
|                      | GSM850: -0.19dBi;                                   |  |  |  |
|                      | GSM1900:0.38dBi                                     |  |  |  |
|                      | WCDMA Band II:-0.19dBi                              |  |  |  |
| Antenna Gain:        | WCDMA Band V:0.38dBi                                |  |  |  |
|                      | LTE Band 2:0.38dBi;                                 |  |  |  |
|                      | LTE Band 4: 0.98dBi                                 |  |  |  |
|                      | LTE Band 5:-0.19dBi;                                |  |  |  |
|                      | LTE Band 13: -1.08dBi                               |  |  |  |
|                      | AC Adpter:Model:TPA-5950100UU                       |  |  |  |
| Accsessories         | INPUT:100-240V~50/60Hz 0.2A                         |  |  |  |
|                      | OUTPUT:5V 1000mA                                    |  |  |  |
|                      | Model: BTE-3002                                     |  |  |  |
| Battery Information: | Normal Voltage: +3.85V                              |  |  |  |
| Dattory mormation.   | Rated capacity: 3000mAh                             |  |  |  |
|                      | Manufacturer:Phenix New Energy (Hui Zhou) Co., Ltd. |  |  |  |

### 3.5 Test Mode

| Test Modes Description                |
|---------------------------------------|
| GSM system, GSM/GPRS, GMSK modulation |
| GSM system, EGPRS, 8PSK modulation    |
| UMTS system, WCDMA, QPSK modulation   |
| UMTS system, WCDMA, 16QAM modulation  |
| LTE system, QPSK modulation           |
| LTE system, 16QAM modulation          |
|                                       |

Remark: The test mode(s) are selected according to relevant radio technology specifications.

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-and-Conditions/Terms-e-Document.aspx. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Cilent's instructions, if any. ### 3.6 Test Environment

| Environment Parameter | Selected Values During Tests |       |  |
|-----------------------|------------------------------|-------|--|
| Relative Humidity     | 52%                          |       |  |
| Atmospheric Pressure: | 101.32 KPa                   |       |  |
| Temperature           | NT 25 °C                     |       |  |
|                       | LV                           | 3.6V  |  |
| Voltage:              | NV                           | 3.85V |  |
|                       | HV                           | 4.2V  |  |

Remark: LV= lower extreme test voltage; NV= nominal voltage

HV= upper extreme test voltage; NT= normal temperature

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-and-Conditions/Terms-e-Document.aspx. Attention is drawn to the limitation on ilability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not excore a transaction from exercising all their rights and obligations under the transaction documents. This document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 30 days only. Report No.: ZR/2020/4000801 Page: 17 of 29

## 4 Description of Tests

### 4.1 Conducted Output Power

Measurement Procedure: FCC KDB 971168 D01 V03r01

The transmitter output was connected to a calibrated coaxial cable, attenuator and power meter, the other end of which was connected to a Base Station Simulator. The Base Station Simulator was set to force the EUT to its maximum power setting. The power output at the transmitter antenna port was determined by adding the value of the cable insertion loss to the power reading. The tests were performed at three frequencies (low channel, middle channel and high channel) and on the highest power levels, which can be setup on the transmitters.

**Remark: Reference test setup 1** 

### 4.2 Effective (Isotropic) Radiated Power of Transmitter

Measurement Procedure: FCC KDB 971168 D01 V03r01 ; C63.26 (2015)

Calculate power in dBm by the following formula:

ERP (dBm) = Conducted Power (dBm) + antenna gain (dBd)

EIRP(dBm) = Conducted Power (dBm) + antenna gain (dBi)

EIRP=ERP+2.15dB

### 4.3 Occupied Bandwidth

Measurement Procedure: FCC KDB 971168 D01 V03r01 Section 4.2

中国·深圳·科技园中区M-10栋一号厂房

The occupied bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission shall be measured. The transmitter output was connected to a calibrated coaxial cable, attenuator and Spectrum analyser, the other end of which was connected to a Base Station Simulator. The Base Station Simulator was set to force the EUT to its maximum power setting. The tests were performed at three frequencies (low channel, middle channel and high channel). The span of the analyzer shall be set to capture all products of the modulation process, including the emission skirts. The resolution bandwidth shall be set to as close to 1 percent of the selected span as is possible without being below 1 percent. The video bandwidth shall be set to 3 times the resolution bandwidth. Video averaging is not permitted. Where practical, a sampling detector shall be used since a peak or, peak hold, may produce a wider bandwidth than actual. The trace data points are recovered and are directly summed in linear terms. The recovered amplitude data points, beginning at the lowest frequency, are placed in a running sum until 0.5 percent of the total is reached and that frequency recorded. The process is repeated for the highest frequency data points. This frequency is recorded. The span between the two recorded frequencies is the occupied bandwidth.

#### Remark: Reference test setup 1

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at http://www.sgs.com/en/Terms-and-Conditions/Terms-end-Conditions/T

sgs.china@sgs.com

Report No.: ZR/2020/4000801 Page: 18 of 29

#### Test Settings

- The signal analyzer's automatic bandwidth measurement capability was used to perform the 99% occupied bandwidth and the 26dB bandwidth. The bandwidth measurement was not influenced by any intermediate power nulls in the fundamental emission.
- 2. RBW = 1 5% of the expected OBW
- 3. VBW ≥ 3 x RBW
- 4. Detector = Peak
- 5. Trace mode = max hold
- 6. Sweep = auto couple
- 7. The trace was allowed to stabilize
- 8. If necessary, steps 2 7 were repeated after changing the RBW such that it would be within

1 - 5% of the 99% occupied bandwidth observed in Step 7

#### 4.4 Band Edge at Antenna Terminals

Measurement Procedure: FCC KDB 971168 D01 V03r01 Section 6.0

The transmitter output was connected to a calibrated coaxial cable, attenuator and Spectrum analyser, the other end of which was connected to a Base Station Simulator. The Base Station Simulator was set to force the EUT to its maximum power setting. The tests were performed at two frequencies (low channel and high channel).in the 1MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of 100kHz or 1% of the emission bandwidth of the fundamental emission of the transmitter may be employed. The EUT emission bandwidth is measured as the width of the signal between two points, outside of which all emission are attenuated at least 26dB below the transmitter power. The video bandwidth of the spectrum analyzer was set at thrice the resolution bandwidth. Detector Mode was set to peak or peak hold power.

#### Remark: Reference test setup 1

Test Settings

- 1. Start and stop frequency were set such that the band edge would be placed in the center of the plot
- 2. Span was set large enough so as to capture all out of band emissions near the band edge
- 3. RBW ≥ 1% of the emission bandwidth
- 4.  $VBW \ge 3 \times RBW$
- 5. Detector = RMS
- 6. Number of sweep points ≥ 2 x Span/RBW
- 7. Trace mode = trace average for continuous emissions, max hold for pulse emissions
- 8. Sweep time = auto couple
- 9. The trace was allowed to stabilize

### 4.5 Spurious And Harmonic Emissions at Antenna Terminal

Measurement Procedure: FCC KDB 971168 D01 V03r01

SGS-CSTC Standards Technical Services Co., Ltd.Shenzhen Branch

Report No.: ZR/2020/4000801 Page: 19 of 29

The transmitter output was connected to a calibrated coaxial cable, attenuator and Spectrum analyzer, the other end of which was connected to a Base Station Simulator. The Base Station Simulator was set to force the EUT to its maximum power setting. The tests were performed at three frequencies (low channel and high channel). The level of the carrier and the various conducted spurious and harmonic frequencies is measured by means of a calibrated spectrum analyzer. The spectrum is scanned from the lowest frequency generated in the equipment up to a frequency including its 10th harmonic. On any frequency outside a licensee's frequency block, the power of any emission shall be attenuated below the transmitter power (P) by at least 43 + 10 log(P) dB. Compliance with these provisions is based on the use of measurement instrumentation employing a resolution bandwidth of 1 MHz or greater. However, in the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emission are attenuated at least 26 dB below the transmitter power.

#### **Remark: Reference test setup 1**

**Test Settings** 

- Start frequency was set to 30MHz and stop frequency was set to at least 10 \* the fundamental frequency (separated into at least two plots per channel)
- 2 Detector = RMS
- 3. Trace mode = trace average for continuous emissions, max hold for pulse emissions
- Sweep time = auto couple
- 5. The trace was allowed to stabilize
- 6. Please see test notes below for RBW and VBW settings

#### 4.6 Peak-Average Ratio

Measurement Procedure: FCC KDB 971168 D01 V03r01 Section 5.7.1

A peak to average ratio measurement is performed at the conducted port of the EUT. For WCDMA signals, the spectrum analyzers Complementary Cumulative Distribution Function (CCDF) measurement profile is used to determine the largest deviation between the average and the peak power of the EUT in a given bandwidth. The CCDF curve shows how much time the peak waveform spends at or above a given average power level. The percent of time the signal spends at or above the level defines the probability for that particular power level. For GSM signals, an average and a peak trace are used on a spectrum analyzer to determine the largest deviation between the average and the peak power of the EUT in a bandwidth greater than the emission bandwidth. The traces are generated with the spectrum analyzer set to zero span mode.

SGS-CSTC Standards Technical Services Co., Ltd.Shenzhen Branch

Report No.: ZR/2020/4000801 Page: 20 of 29

#### Test Settings

- 1. The signal analyzer's CCDF measurement profile is enabled
- 2. Frequency = carrier center frequency
- 3. Measurement BW > Emission bandwidth of signal
- 4. The signal analyzer was set to collect one million samples to generate the CCDF curve
- 5. The measurement interval was set depending on the type of signal analyzed. For continuous signals (>98% duty cycle), the measurement interval was set to 1ms. For burst transmissions, the spectrum analyzer is set to use an internal "RF Burst" trigger that is synced with an incoming pulse and the measurement interval is set to less than the duration of the "on time" of one burst to ensure that energy is only captured during a time in which the transmitter is operating at maximum power

### 4.7 Field Strength of Spurious Radiation

Measurement Procedure: FCC KDB 971168 D01 V03r01

#### Below 1GHz test procedure as below:

- 1). The EUT was powered ON and placed on a 80cm high table in the chamber. The antenna of the transmitter was extended to its maximum length.
- 2). The disturbance of the transmitter was maximized on the test receiver display by raising and lowering from 1m to 4m (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) the receive antenna and by rotating through 360° the turntable. After the fundamental emission was maximized, a field strength measurement was made.
- 3). Steps 1) and 2) were performed with the EUT and the receive antenna in both vertical and horizontal polarization.
- 4). The transmitter was then removed and replaced with another antenna. The center of the antenna was approximately at the same location as the center of the transmitter.
- 5). A signal at the disturbance was fed to the substitution antenna by means of a non-radiating cable. With both the substitution and the receive antennas horizontally polarized, the receive antenna was raised and lowered to obtain a maximum reading at the test receiver. The level of the signal generator was adjusted until the measured field strength level in step 2) is obtained for this set of conditions.
- 6). The output power into the substitution antenna was then measured.
- 7). Steps 5) and 6) were repeated with both antennas polarized.
- 8) Calculate power in dBm by the following formula:

ERP(dBm) = Pg(dBm) - cable loss (dB) + antenna gain (dBd)

#### Where:

Pd is the dipole equivalent power, Pg is the generator output into the substitution antenna, and the antenna gain is the gain of the substitute antenna used relative to either a half-wave dipole (dBd) or an isotropic source (dBi). The substitute level is equal to Pg [dBm] – cable loss [dB]. The calculated Pd levels are then compared to the absolute spurious emission limit of -13dBm which is equivalent to the required minimum attenuation of 43 + 10log10(Power [Watts]).

#### Above 1GHz test procedure as below:

1) Different between above is the test site, change from Semi- Anechoic

Chamber to fully Anechoic Chamber

**UUU** 

SGS-CSTC Standards Technical Services Co., Ltd.Shenzhen Branch

Report No.: ZR/2020/4000801 Page: 21 of 29

2) Calculate power in dBm by the following formula:

EIRP(dBm) = Pg(dBm) - cable loss (dB) + antenna gain (dBi)

EIRP=ERP+2.15dB

Where:

Pg is the generator output power into the substitution antenna.

- 3. Test the EUT in the lowest channel, the middle channel the Highest channel
- 4. The radiation measurements are performed in X, Y, Z axis positioning. And found the X axis positioning which it is worse case, Only the test worst case mode is recorded in the report.
- 5. Repeat above procedures until all frequencies measured was complete

Remark: Reference test setup 3

### 4.8 Frequency Stability / Temperature Variation

Measurement Procedure:

Frequency stability testing is performed in accordance with the guidelines of FCC KDB 971168 D01 V03r01; ANSI/C63.26 (2015)

- . The frequency stability of the transmitter is measured by:
- a.) **Temperature:** The temperature is varied from -30°C to +50°C in 10°C increments using an environmental chamber.
- b.) **Primary Supply Voltage:** The primary supply voltage is varied from 85% to 115% of the nominal value for non hand-carried battery and AC powered equipment. For hand-carried, battery-powered equipment, primary supply voltage is reduced to the battery operating end point which shall be specified by the manufacturer.

Specification – The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block. The frequency stability of the transmitter shall be maintained within  $\pm 0.00025\%$  ( $\pm 2.5$  ppm ) of the center frequency.

#### **Time Period and Procedure:**

- 1. The carrier frequency of the transmitter is measured at room temperature (20°C to provide a reference).
- 2. The equipment is turned on in a "standby" condition for fifteen minutes before applying power to the transmitter. Measurement of the carrier frequency of the transmitter is made within one minute after applying power to the transmitter.
- 3. Frequency measurements are made at 10°C intervals ranging from -30°C to +50°C. A period of at least one half-hour is provided to allow stabilization of the equipment at each temperature level.

## 6 Measurement Uncertainty

For a 95% confidence level (k = 2), the measurement expanded uncertainties for defined systems, in accordance with the recommendations of ISO 17025 as following:

| Test Item                     | Extended Uncertainty                | Data                                      |  |
|-------------------------------|-------------------------------------|---|--|
| Transmit Output Power Data    | Power [dBm]                         | U =±0.37 dB                               |  |
| Bandwidth                     | Magnitude [%] U =± 0.2%             |   |  |
| Band Edge Compliance          | Disturbance Power [dBm] U = ±2.0 dB |   |  |
| Spurious Emissions, Conducted | Disturbance Power [dBm]             | U = ±2.0 dB                               |  |
|                               |                                     | For 3 m Chamber:                          |  |
|                               |                                     | $U = \pm 4.5 \text{ dB}$ (30 MHz to 1GHz) |  |
| Field Strength of Spurious    |                                     | $U = \pm 3.3 \text{ dB}$ (above 1 GHz)    |  |
| Radiation                     | ERP[dBm]/EIRP [dBm]                 | For 10 m Chamber:                         |  |
|                               |                                     | $U = \pm 4.5 \text{ dB}$ (30 MHz to 1GHz) |  |
|                               |                                     | $U = \pm 3.2 \text{ dB}$ (above 1 GHz)    |  |
| Frequency Stability           | Frequency Accuracy [ppm]            | U = ±0.24 ppm                             |  |

## 7 Appendixes

| Appendix A   | Photographs of Set-Up for HR202030023 |
