To:
Federal Communications Commission,
Authorization & Evaluation Division,
7435 Oakland Mills Road,
Columbia, MD 21046

Dear Sir/Madam,

We, BayNexus Inc, requests acceptance of the labeling proposal described below for FCC ID:2ABHWBN-HH-G03.

Since the product housing is extremely limited space available to attach the required label carrying the FCC identifier, attaching the label to the back cover is not acceptable because the back cover is a removable item. For this reason, we proposes placing the label carrying the FCC identifier inside the compartment as shown

Firstly, the FCC ID label on the inside screwed cover- battery compartment, so that, it is viewable to our users every time when they remove the back cover; and it does not affect the designing and structuring of the removable back cover.

Check out the photo below showing clearly the location of the FCC ID and the removed back cover in figure 1.

Figure 1

BayNexus Inc

There is no need to remove the inside cover to charge the battery and the battery is not to be sold separate. There is a cradle for charging. In the bottom of the product there are two pin, please see the below picture as shown in figure 2.

Figure 2

The below figure 3 is shown that the product is charging.

Figure 3

Secondly, we print the FCC ID on the bottom side of our package (box), so that it is always viewable every time a new device is purchased.

Check out a photo below showing clearly the location of the FCC ID on the package in figure4.
