May Chen / Manager

This test report consists of 25 pages in total. It may be duplicated completely for legal use with the approval of the applicant. It should not be reproduced except in full, without the written approval of our laboratory. The test results in the report only apply to the tested sample. The test results in this report are traceable to the national or international standards.

2023/2/17

Date:

Prepared by : Vivian Huang / Specialist

This report is governed by, and incorporates by reference, the Conditions of Testing as posted at the date of issuance of this report at <a href="http://www.bureauveritas.com/home/about-us/usiness/cps/about-us/terms-conditions/">http://www.bureauveritas.com/home/about-us/usiness/cps/about-us/terms-conditions/</a> and is intended for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accredited tests. Statements of conformity are based on simple acceptance criteria without taking measurement uncertainty into account, unless otherwise requested in writing. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the report contents.

The above equipment has been tested by **Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch**, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's RF characteristics under the conditions specified in this report.

# 2 Summary of Test Results

| 47 CFR FCC Part 15, Subpart E (Section 15.407) |                                |        |  |  |
|--|--------------------------------|--------|--|--|
| Clause   | Test Item                      | Result | Remark   |  |
| 15.407(a)(1/2/3)                               | RF Output Power                | NA     | Refer to Note 1 below                                    |  |
| 15.407(a)(1/2/3)                               | Power Spectral Density         | NA     | Refer to Note 1 below                                    |  |
| 15.407(e)                                      | 6 dB Bandwidth                 | NA     | Refer to Note 1 below                                    |  |
|  | Occupied Bandwidth             | NA     | Refer to Note 1 below                                    |  |
| 15.407(g)                                      | Frequency Stability            | NA     | Refer to Note 1 below                                    |  |
| 15.407(b)(9)                                   | AC Power Conducted Emissions   | Pass   | Minimum passing margin is -10.43 dB at<br>0.15000 MHz    |  |
| 15.407(b)(9)                                   | Unwanted Emissions below 1 GHz | Pass   | Minimum passing margin is -5.1 dB at<br>52.71 MHz        |  |
| 15.407(b)<br>(1/2/3/4(i)/10)                   | Unwanted Emissions above 1 GHz | NA     | Refer to Note 1 below                                    |  |
| 15.203   | Antenna Requirement            | Pass   | Antenna connector is ipex(MHF) not a standard connector. |  |

Notes:

- 1. AC Power Conducted Emissions & Unwanted Emissions below 1 GHz was performed for this addendum. The others testing data refer to original test report.
- 2. Determining compliance based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

# 2.1 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

|   | Parameter                      | Specification    | Uncertainty<br>(±) |
|---|--------------------------------|------------------|--------------------|
| A | AC Power Conducted Emissions   | 150 kHz ~ 30 MHz | 1.9 dB             |
|   | Inwanted Emissions holew 1 CHz | 9 kHz ~ 30 MHz   | 3.1 dB             |
| Ľ | Inwanted Emissions below 1 GHz | 30 MHz ~ 1 GHz   | 5.4 dB             |

The other instruments specified are routine verified to remain within the calibrated levels, no measurement uncertainty is required to be calculated.

# 2.2 Supplementary Information

There is not any deviation from the test standards for the test method, and no modifications required for compliance.

# **3** General Information

# 3.1 General Description of EUT

| Product               | GigaSpire BLAST u4xg, GigaSpire BLAST u4g   |
|-----------------------|---|
| Brand                 | Calix   |
| Test Model            | u4xg GS2128XG   |
| Series Model          | u4g GS2128G   |
| Status of EUT         | Engineering sample  |
| Power Supply Rating   | Refer to Note   |
| Modulation Type       | 64QAM, 16QAM, QPSK, BPSK for OFDM<br>256QAM for OFDM in 11ac mode<br>1024QAM for OFDMA in 11ax mode   |
| Modulation Technology | OFDM, OFDMA   |
| Transfer Rate         | 802.11a: up to 54Mbps<br>802.11n: up to 300Mbps<br>802.11ac: up to 866.7 Mbps<br>802.11ax: up to 1201.0 Mbps  |
| Operating Frequency   | 5.18 GHz ~ 5.24 GHz<br>5.745 GHz ~ 5.825 GHz  |
| Number of Channel     | 802.11a, 802.11n (HT20), 802.11ac (VHT20), 802.11ax (HE20): 9<br>802.11n (HT40), 802.11ac (VHT40), 802.11ax (HE40): 4<br>802.11ac (VHT80), 802.11ax (HE80): 2   |
| Output Power          | CDD Mode:         5.18 GHz ~ 5.24 GHz : 665.829 mW (28.23 dBm)         5.745 GHz ~ 5.825 GHz : 850.052 mW (29.29 dBm)         Beamforming Mode:         5.18 GHz ~ 5.24 GHz : 626.156 mW (27.97 dBm)         5.745 GHz ~ 5.825 GHz : 705.051 mW (28.48 dBm) |

Note:

- 1. This is a supplementary report of Report No.: RFBAOZ-WTW-P22061106-1. The differences between them are as below information:
  - Add one newly model:

| Original   |               |   |  |
|--|---------------|---|--|
| Product Description  | Model         | Difference  |  |
| GigaSpire BLAST u4g  | u4g GS2128G   | -   |  |
| Newly  |               |   |  |
| Product Description  | Model         | Difference  |  |
| GigaSpire BLAST u4xg   | u4xg GS2128XG | Only different in layout and related components of BOSA & laser driver. |  |
| From the above models, model: <b>u4xg GS2128XG</b> was selected as representative model for the test and its data was recorded in this report. |               |   |  |

 According to above conditionns, only AC Power Conducted Emissions & Unwanted Emissions below 1 GHz need to be performed. And all data are verified to meet the requirements.

# 3. The EUT uses following accessories.

| Brand        | Model                   | Specification  |  |
|--------------|-------------------------|--|--|
| AMIGO        | AMS157-1202500FU        | AC Input : 100-240V~50/60Hz 1A<br>DC Output : 12V, 2.5A<br>DC Output Cable : 1.5m, unshielded<br>Plug : US     |  |
| AC Adapter 2 |                         |  |  |
| Brand        | Model                   | Specification  |  |
| MOSO         | MSS-V2500WR120-030E1-US | AC Input : 100-240V~50/60Hz 1A max<br>DC Output : 12V, 2.5A<br>DC Output Cable : 1.5m, unshielded<br>Plug : US |  |

4. There are WLAN (2.4 GHz) and WLAN (5 GHz) technology used for the EUT.

| 5. Simultaneously transmission condition.  |             |           |  |  |
|--|-------------|-----------|--|--|
| Condition  | Technology  |           |  |  |
| 1  | WLAN 2.4GHz | WLAN 5GHz |  |  |
| Note: The emission of the simultaneous operation has been evaluated and no non-compliance was found. |             |           |  |  |

6. The above EUT information is declared by manufacturer and for more detailed features description, please refers to the manufacturer's specifications or user's manual.

# 3.2 Antenna Description of EUT

| 1. The antenna information is listed as below | v. |
|---|----|
|---|----|

| Antenna<br>NO. | Model              | Brand  | Antenna<br>Net<br>Gain(dBi) | Frequency range<br>(MHz) | Antenna<br>Type | Connector<br>Type | Cable<br>Length(cm) |
|----------------|--------------------|--------|-----------------------------|--------------------------|-----------------|-------------------|---------------------|
| 1              | 290-20509          | HONGBO | 3.6                         | 2400-2500                | Dipole          | ipex(MHF)         | 10                  |
| 2              | 290-20510          | HONGBO | 4.8                         | 2400-2500                | Dipole          | ipex(MHF)         | 31.5                |
| 3              | RFPCA341221IM5B901 | PSA    | 4.45                        | 5150-5925                | Monopole        | ipex(MHF)         | 21.5                |
| 4              | RFPCA341218IM5B901 | PSA    | 4.46                        | 5150-5925                | Monopole        | ipex(MHF)         | 18                  |

\* Detail antenna specification please refer to antenna datasheet and/or antenna measurement report.

2. The EUT incorporates a MIMO function:

| 5 GHz Band       |            |              |  |  |  |  |
|------------------|------------|--------------|--|--|--|--|
| Modulation Mode  | TX & RX Co | onfiguration |  |  |  |  |
| 802.11a          | 2TX        | 2RX          |  |  |  |  |
| 802.11n (HT20)   | 2TX        | 2RX          |  |  |  |  |
| 802.11n (HT40)   | 2TX        | 2RX          |  |  |  |  |
| 802.11ac (VHT20) | 2TX        | 2RX          |  |  |  |  |
| 802.11ac (VHT40) | 2TX        | 2RX          |  |  |  |  |
| 802.11ac (VHT80) | 2TX        | 2RX          |  |  |  |  |
| 802.11ax (HE20)  | 2TX        | 2RX          |  |  |  |  |
| 802.11ax (HE40)  | 2TX        | 2RX          |  |  |  |  |
| 802.11ax (HE80)  | 2TX        | 2RX          |  |  |  |  |

Note:

1. All of modulation mode support beamforming function except 802.11a modulation mode.

2. The EUT support Beamforming and CDD mode, therefore both mode were investigated and the worst case scenario was identified. The worst case data were presented in test report.

3. The modulation and bandwidth are similar for 802.11n mode for 20 MHz (40 MHz), 802.11ac mode for 20 MHz (40 MHz, 80 MHz) and 802.11ax mode for 20 MHz (40 MHz, 80 MHz), therefore the manufacturer will control the power for 802.11n/ac mode is the same as the 802.11ax or more lower than it and investigated worst case to representative mode in test report.

# 3.3 Channel List

# FOR 5180 ~ 5240 MHz

4 channels are provided for 802.11a, 802.11n (HT20), 802.11ac (VHT20) and 802.11ax (HE20):

| Channel | Frequency | Channel | Frequency |
|---------|-----------|---------|-----------|
| 36      | 5180 MHz  | 44      | 5220 MHz  |
| 40      | 5200 MHz  | 48      | 5240 MHz  |

2 channels are provided for 802.11n (HT40), 802.11ac (VHT40) and 802.11ax (HE40):

| Channel | Frequency | Channel | Frequency |
|---------|-----------|---------|-----------|
| 38      | 5190 MHz  | 46      | 5230 MHz  |

1 channels are provided for 802.11ac (VHT80) and 802.11ax (HE80):

| Channel | Frequency |
|---------|-----------|
| 42      | 5210 MHz  |

### FOR 5745 ~ 5825 MHz:

5 channels are provided for 802.11a, 802.11n (HT20), 802.11ac (VHT20) and 802.11ax (HE20):

| Channel | Frequency | Channel | Frequency |
|---------|-----------|---------|-----------|
| 149     | 5745 MHz  | 161     | 5805 MHz  |
| 153     | 5765 MHz  | 165     | 5825 MHz  |
| 157     | 5785 MHz  |         |           |

2 channels are provided for 802.11n (HT40), 802.11ac (VHT40) and 802.11ax (HE40):

| Channel Frequency |          | Channel | Frequency |  |
|-------------------|----------|---------|-----------|--|
| 151               | 5755 MHz | 159     | 5795 MHz  |  |

1 channel is provided for 802.11ac (VHT80) and 802.11ax (HE80):

| Channel | Frequency |
|---------|-----------|
| 155     | 5775 MHz  |

# 3.4 Test Mode Applicability and Tested Channel Detail

|           | 1. Pre-Scan has been conducted to determine the worst-case mode from all possible combinations |
|-----------|--|
| Pre-Scan: | between available modulations, data rates and antenna ports (if EUT with antenna diversity     |
|           | architecture).   |

Note: Partial RU (resource unit) and channel puncturing/bandwidth reduction mechanisms are not supported.

#### Following channel(s) was (were) selected for the final test as listed below:

| Test Item                         | Mode            | Signal Mode | Tested Channel | Modulation | Data Rate<br>Parameter |  |
|-----------------------------------|-----------------|-------------|----------------|------------|------------------------|--|
| AC Power Conducted Emissions      | 802.11ax (HE40) | CDD         | 151            | BPSK       | MCS0                   |  |
| Unwanted Emissions below 1<br>GHz | 802.11ax (HE40) | CDD         | 151            | BPSK       | MCS0                   |  |
| Note: In the original report:     |                 |             |                |            |                        |  |

1. AC Adapter Worst Condition: AMS157-1202500FU

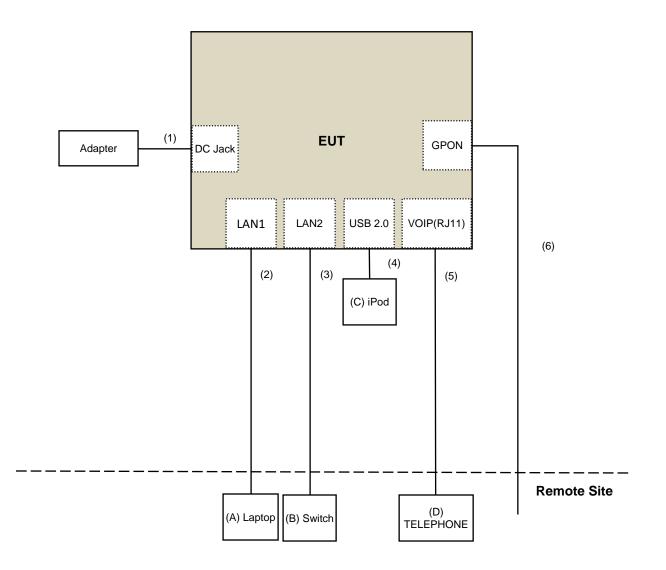

2. Lying/ Wall Mount Worst Condition: Lying

# 3.5 Test Program Used and Operation Descriptions

Controlling software (qdart\_conn.win.1.0\_installer\_00093.1) has been activated to set the EUT under transmission condition continuously at specific channel frequency.

# 3.6 Connection Diagram of EUT and Peripheral Devices

Notes:

The test was performed in 966 Chamber No. 3.
 Tested Date: 2022/12/26 ~ 2022/12/27

# 5 Limits of Test Items

# 5.1 AC Power Conducted Emissions

|                 | Conducted Limit (dBuV) |         |  |  |  |
|-----------------|------------------------|---------|--|--|--|
| Frequency (MHz) | Quasi-peak             | Average |  |  |  |
| 0.15 - 0.5      | 66 - 56                | 56 - 46 |  |  |  |
| 0.50 - 5.0      | 56                     | 46      |  |  |  |
| 5.0 - 30.0      | 60                     | 50      |  |  |  |

Notes:

- 1. The lower limit shall apply at the transition frequencies.
- 2. The limit decreases in line with the logarithm of the frequency in the range of 0.15 to 0.50 MHz.

### 5.2 Unwanted Emissions below 1 GHz

Radiated emissions which fall in the restricted bands must comply with the radiated emission limits specified as below table.

| Frequencies (MHz) | Field Strength (microvolts/meter) | Measurement Distance (meters) |  |  |
|-------------------|-----------------------------------|-------------------------------|--|--|
| 0.009 ~ 0.490     | 2400/F(kHz)                       | 300                           |  |  |
| 0.490 ~ 1.705     | 24000/F(kHz)                      | 30                            |  |  |
| 1.705 ~ 30.0      | 30                                | 30                            |  |  |
| 30 ~ 88           | 100                               | 3                             |  |  |
| 88 ~ 216          | 150                               | 3                             |  |  |
| 216 ~ 960         | 200                               | 3                             |  |  |
| Above 960         | 500                               | 3                             |  |  |

Notes:

1. The lower limit shall apply at the transition frequencies.

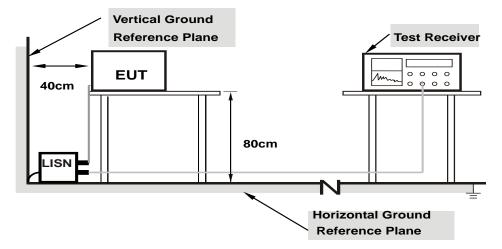

2. Emission level  $(dBuV/m) = 20 \log Emission level (uV/m)$ .

# 6 Test Arrangements

# 6.1 AC Power Conducted Emissions

6.1.1 Test Setup

Note: 1.Support units were connected to second LISN.

For the actual test configuration, please refer to the attached file (Test Setup Photo).

### 6.1.2 Test Procedure

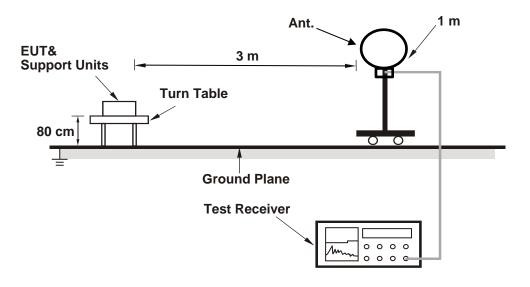

- a. The EUT was placed on a 0.8 meter to the top of table and placed 0.4 meters from the conducting wall of the shielded room with EUT being connected to the power mains through a line impedance stabilization network (LISN). Other support units were connected to the power mains through another LISN. The two LISNs provide 50 ohm/ 50 uH of coupling impedance for the measuring instrument.
- b. Both lines of the power mains connected to the EUT were checked for maximum conducted interference.
- c. The frequency range from 150 kHz to 30 MHz was searched. Emission levels under (Limit 20 dB) was not recorded.
- Note: The resolution bandwidth and video bandwidth of test receiver is 9 kHz for quasi-peak detection (QP) and average detection (AV) at frequency 0.15 MHz-30 MHz.

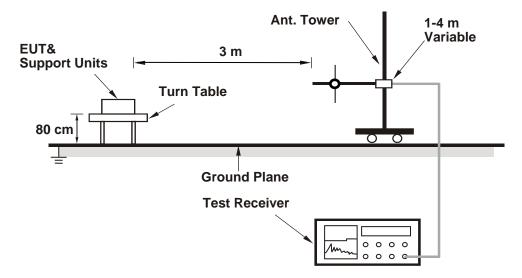

# 6.2 Unwanted Emissions below 1 GHz

# 6.2.1 Test Setup

# For Radiated emission below 30 MHz

### For Radiated emission above 30 MHz

For the actual test configuration, please refer to the attached file (Test Setup Photo).

## 6.2.2 Test Procedure

#### For Radiated emission below 30 MHz

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at 3 meter chamber room for test. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. Parallel, perpendicular, and ground-parallel orientations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Quasi-Peak Detect Function and Specified Bandwidth with Maximum Hold Mode, except for the frequency band (9 kHz to 90 kHz and 110 kHz to 490 kHz) set to average detect function and peak detect function.

#### Notes:

- 1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 200 Hz at frequency below 150 kHz.
- 2. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 9 kHz or 10 kHz at frequency (150 kHz to 30 MHz).
- 3. All modes of operation were investigated and the worst-case emissions are reported.

#### For Radiated emission above 30 MHz

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at 3 meter chamber room for test. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to quasi-peak detect function and specified bandwidth with maximum hold mode when the test frequency is below 1 GHz.

### Notes:

- 1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120 kHz for Quasi-peak detection (QP) at frequency below 1 GHz.
- 2. All modes of operation were investigated and the worst-case emissions are reported.

| 4  | 0.20863                   | 9.96  | 34.17 | 21.22 | 44.13                                 | 31.18 | 63.26 | 53.26          | -19.13 | -22.08 |  |  |  |  |
| 5  | 0.32197                   | 9.96  | 34.89 | 26.73 | 44.85                                 | 36.69 | 59.66 | 49.66          | -14.81 | -12.97 |  |  |  |  |
| 6  | 8.94914                   | 10.54   | 22.61 | 16.78 | 33.15                                 | 27.32 | 60.00 | 50.00          | -26.85 | -22.68 |  |  |  |  |

#### Remarks:

- 1. Q.P. and AV. are abbreviations of quasi-peak and average individually.
- 2. The emission levels of other frequencies were very low against the limit.
- 3. Margin value = Emission level Limit value
- 4. Correction factor = Insertion loss + Cable loss
- 5. Emission Level = Correction Factor + Reading Value

## Remarks:

- 1. Q.P. and AV. are abbreviations of quasi-peak and average individually.
- 2. The emission levels of other frequencies were very low against the limit.
- 3. Margin value = Emission level Limit value
- 4. Correction factor = Insertion loss + Cable loss
- 5. Emission Level = Correction Factor + Reading Value

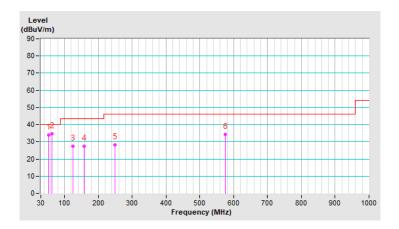

# 7.2 Unwanted Emissions below 1 GHz

| RF Mode         | 802.11ax (HE40) | Channel                       | CH 151:5755 MHz  |
|-----------------|-----------------|-------------------------------|------------------|

| 4  | 157.49   | 27.3 QP                       | 43.5              | -16.2          | 1.50 H                   | 132                        | 35.5                   | -8.2                           |  |  |  |  |
| 5  | 249.99   | 28.1 QP                       | 46.0              | -17.9          | 1.50 H                   | 39                         | 37.6                   | -9.5                           |  |  |  |  |
| 6  | 576.03   | 34.2 QP                       | 46.0              | -11.8          | 1.50 H                   | 323                        | 35.4                   | -1.2                           |  |  |  |  |

#### **Remarks:**

- 1. Emission Level(dBuV/m) = Raw Value(dBuV) + Correction Factor(dB/m)
- 2. Correction Factor(dB/m) = Antenna Factor(dB/m) + Cable Factor(dB) Pre-Amplifier Factor(dB)
- 3. Margin value = Emission Level Limit value
- 4. The other emission levels were very low against the limit of frequency range 30 MHz ~ 1 GHz.
- 5. The emission levels were very low against the limit of frequency range 9 kHz ~ 30 MHz: the amplitude of spurious emissions attenuated more than 20 dB below the permissible value to be report.

| 6  | 576.00   | 33.9 QP                       | 46.0              | -12.1          | 1.50 V                   | 306                        | 35.1                   | -1.2                           |  |  |  |  |

#### **Remarks:**

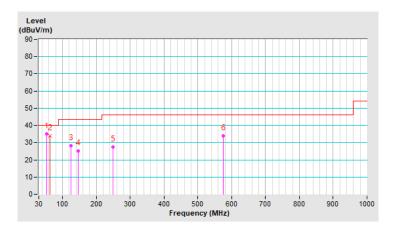

1. Emission Level(dBuV/m) = Raw Value(dBuV) + Correction Factor(dB/m)

2. Correction Factor(dB/m) = Antenna Factor(dB/m) + Cable Factor(dB) – Pre-Amplifier Factor(dB)

3. Margin value = Emission Level – Limit value

4. The other emission levels were very low against the limit of frequency range 30 MHz ~ 1 GHz.

5. The emission levels were very low against the limit of frequency range 9 kHz ~ 30 MHz: the amplitude of spurious emissions attenuated more than 20 dB below the permissible value to be report.

# 8 Pictures of Test Arrangements

Please refer to the attached file (Test Setup Photo)

# 9 Information of the Testing Laboratories

We, Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch, were founded in 1988 to provide our best service in EMC, Radio, Telecom and Safety consultation. Our laboratories are FCC recognized accredited test firms and accredited according to ISO/IEC 17025.

If you have any comments, please feel free to contact us at the following:

# Lin Kou EMC/RF Lab Tel: 886-2-26052180 Fax: 886-2-26051924

Hsin Chu EMC/RF/Telecom Lab Tel: 886-3-6668565 Fax: 886-3-6668323

# Hwa Ya EMC/RF/Safety Lab

Tel: 886-3-3183232 Fax: 886-3-3270892

Email: <u>service.adt@bureauveritas.com</u> Web Site: <u>http://ee.bureauveritas.com.tw</u>

The address and road map of all our labs can be found in our web site also.
