

RF EXPOSURE EVALUATION REPORT

- APPLICANT : S2E, Inc.
- PRODUCT NAME : MEE audio connect hub
- : AF-CH MODEL NAME
- **BRAND NAME** : N/A
- FCC ID : 2ABMRC2HUB
- STANDARD(S) : 47CFR 2.1091 KDB 447498 D01 General RF Exposure Guidance v06
- **ISSUE DATE** : 2018-01-09

Tested by:

Feng Funei Peng Fuwei (Test engineer)

Approved by:

Peng Huarui (Supervisor)

NOTE: This document is issued by MORLAB, the test report shall not be reproduced except in full without prior written permission of the company. The test results apply only to the particular sample(s) tested and to the specific tests carried out which is available on request for validation and information confirmed at our website.

1.3.1. Identification of all used EUT

The EUT identity consists of numerical and letter characters, the letter character indicates the test sample, and the following two numerical characters indicate the software version of the test sample.

| EUT Identity | Hardware Version | Software Version | |

| 1# | 1.0 | 1.0 | |

1.4. Applied Reference Documents

Leading reference documents for testing:

| | | devices |
| 2 | KDB 447498 D01v06 | General RF Exposure Guidance |

2. Device Category And RF Exposure Limit

Per user manual, Based on 47CFR 2.1091, this device belongs to mobile device category with General Population/Uncontrolled exposure.

Mobile Devices:

47CFR 2.1091(b)

For purposes of this section, a mobile device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons. In this context, the term "fixed location" means that the device is physically secured at one location and is not able to be easily moved to another location. Transmitting devices designed to be used by consumers or workers that can be easily re-located, such as wireless devices associated with a personal computer, are considered to be mobile devices if they meet the 20 centimeter separation requirement.

GENERAL POPULATION / UNCONTROLLED EXPOSURE

The general population/uncontrolled exposure limits are applicable to situations in which the general public may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Members of the general public would come under this category when exposure is not employment-related; for example, in the case of a wireless transmitter that exposes persons in its vicinity. Warning labels placed on low-power consumer devices such as cellular telephones are not considered sufficient to allow the device to be considered under the occupational/controlled category, and the general population/uncontrolled exposure limits apply to these devices.

| Frequency range (MHz) | Electric field strength (V/m) 3) Limits for General | Magnetic field strength (A/m) Population/Uncontro | Power density (mW/cm ²) lled Exposure | Averaging time (minutes) |

3. Measurement Of conducted Peak Output Power

^{1.} Bluetooth Peak output power

| Band | Channel | Output Power(dBm) | | | |
|-------------|---------|-------------------|-----------|--------|--|
| Band | Channel | GFSK | π/4-DQPSK | 8-DPSK | |
| BT | 0 | 17.33 | 13.27 | 13.77 | |
| 4.2(BR/EDR) | 39 | 18.89 | 15.48 | 15.95 | |
| 4.2(DR/EDR) | 78 | 19.06 | 15.85 | 16.29 | |

4. RF Exposure Evaluation

Standalone transmission MPE evaluation

| Bands | Frequency (MHz) | Antenna Gain (dBi) | Conducted Peak Power (dBm) | EIRP (mW) | Power density (mW/cm²) | Limit for MPE (mW/cm ²) |
|-------------------|--------------------|--------------------------|----------------------------------|--------------|------------------------------|---|
| BT4.2 (BR/EDR) | 2482 | 2.85 | 19.06 | 155.24 | 0.031 | 1.0 |

1. MPE calculation method

Power Density = EIRP/ $4\pi R^2$

Where: EIRP = P·G

P = Peak out power

- G = Antenna gain
- R = Separation distance (20cm)
