Conditional Test Case		
Support (Yes / No)	Condition	Definition
No	C1	Mandatory for UUT which supports multi-step registration message
No	C2	Mandatory for UUT which supports single-step registration with no CPI-signed data in the registration message. By definition, this is a subset of Category A devices which determine all registration information, including location, without CPI intervention.
Yes	C3	Mandatory for UUT which supports single-step registration containing CPIsigned data in the registration message.
No	C4	Mandatory for UUT which supports RECEIVED_POWER_WITHOUT_GRANT measurement report type
Yes	C5	Mandatory for UUT which supports RECEIVED_POWER_WITH_GRANT measurement report type.
No	C6	Mandatory for UUT which supports parameter change being made at the UUT and prior to sending a deregistration.

3.1 Test configuration with Domain Proxy

{RN (CPE-CBSD) + Domain Proxy} as UUT, {BN (BTS-CBSD) + Domain Proxy}

Note: The support equipment BN is list in clause 2.4 in this report.

3.3 Protocol test procedure

The test cases for SAS<->CBSD protocol in [n.2] apply for CPE-CBSD device type. Following the [n.1], when running the test cases in [n.2] for CPE-CBSD device type, verify that:

1. CPE-CBSD can begin transmitting its RF only after receiving radio signal from its compatible BTS-CBSD.
2. For all CPE-CBSD RF transmissions, the CPE-CBSD UUT radio frequency range and bandwidth are less or equal to the frequency range and bandwidth of its compatible BTS-CBSD.
3. Judging the last execution step appearing in [n.2] with "User data traffics" instead of "RF transmission."

3.4 Time test for getting Grant Procedure

Use the WinnForum SAS Harness run test case WINNF.FT.C.GRA.1. Without answering the last question in WINNF.FT.C.GRA.1 will keep UUT's grant request being rejected, then measure the time.

#	Test Execution Steps	Results
1	<p>Ensure the following conditions are met for test entry:</p> <ul style="list-style-type: none"> • UUT has successfully completed SAS Discovery and Authentication with the SAS Test Harness • UUT has registered with the SAS, with CBSID ID = C • UUT has a single valid grant G with parameters {lowFrequency = FL, highFrequency = FH, maxEirp = Pi}, with grant in AUTHORIZED state, and grantExpireTime set to a value far past the duration of this test case <p><i>Note: in order for the UUT to request a grant with the parameters {lowFrequency, highFrequency, maxEirp}, the SAS Test Harness may need to provide appropriate guidance in the availableChannel object of the spectrumInquiry response message, and the operationParam object of the grant response message. Alternately, the UUT vendor may provide the ability to set those parameters on the UUT so that the UUT will request a grant with those parameters.</i></p>	--
2	<p>UUT and SAS Test Harness perform a series of Heartbeat Request/Response cycles, which continues until the other test steps are complete. 5. Result of Time test for getting Grant

5.1 1 second within any 10-second period

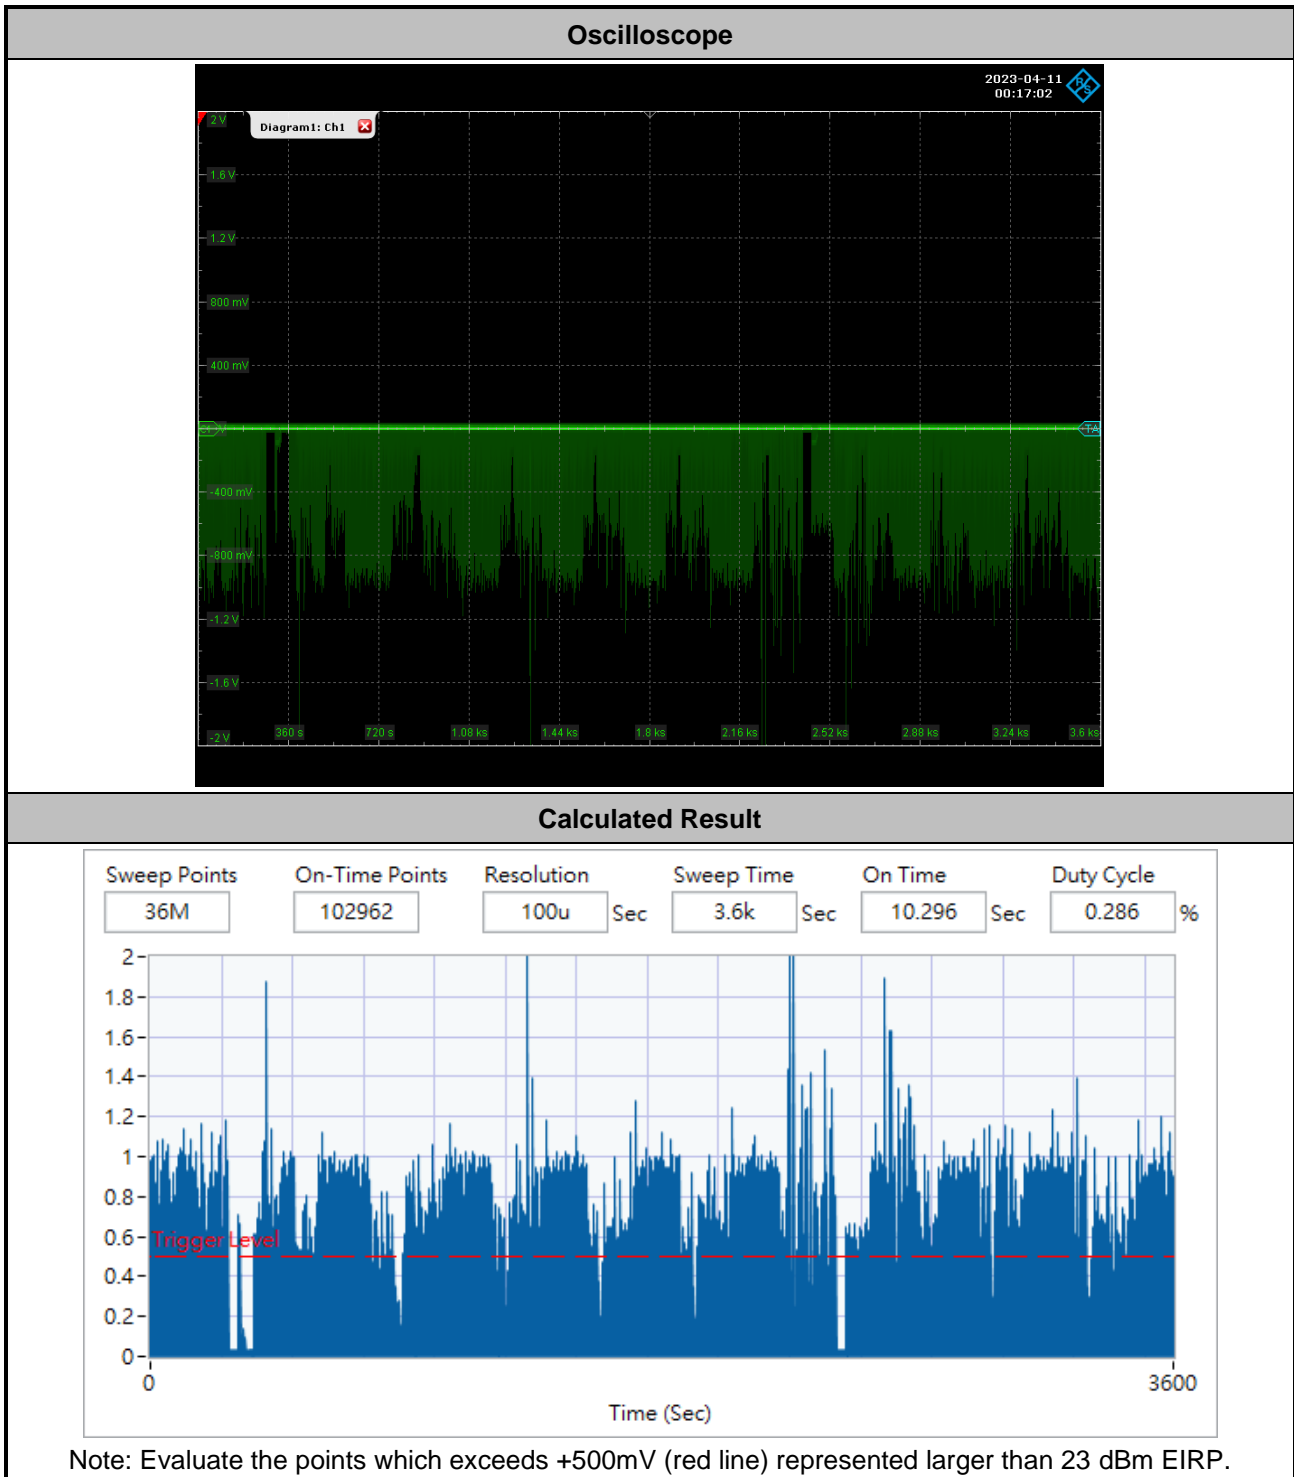

The sum of On Time (aggregated time from marker 1 to 2): 26.6ms < 1s, Pass.

5.2 10 seconds within any 300-second period

The sum of On Time (aggregated time from marker 1 to 2): 872.9ms < 10s, Pass.

5.3 20 seconds within any 3600-second period

The sum of On Time (aggregated time from marker 1 to 2): 10.296s < 20s, Pass.

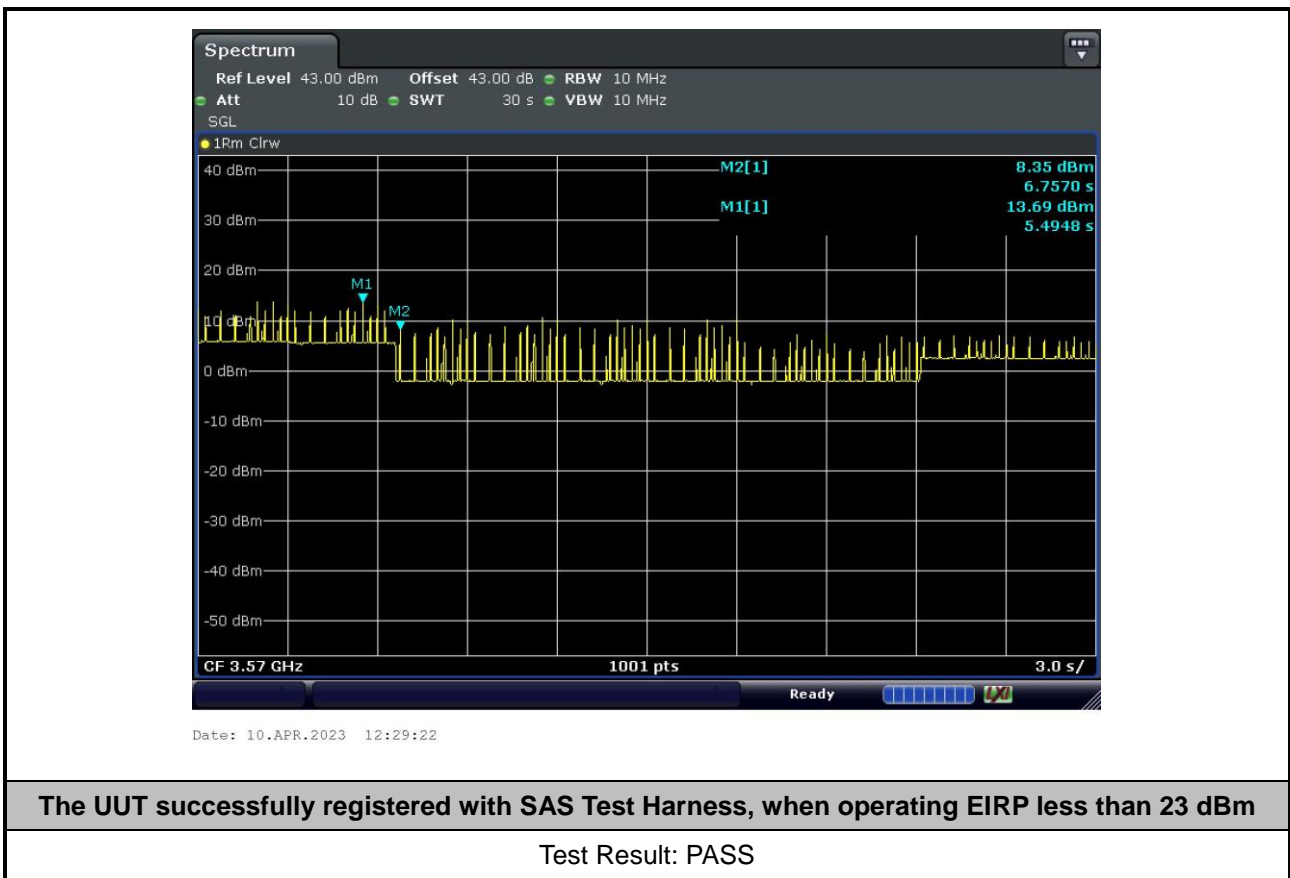

6. UUT register with the SAS irrespective of power levels

6.1 Test Procedure

1. Set the SAS test harness to grant UUT with the highest EIRP higher than 23dBm.
2. Check if UUT has successfully registered with SAS Test Harness, when operating EIRP less than 23 dBm.
3. After the UUT granted/authorized by the SAS, it can transmit with power less than the maxEIRP granted from SAS.

6.2 Result

The UUT can register with SAS under above operating conditions to meet the FCC criteria that the UUT will register with the SAS irrespective of power levels at which the device is set to operate – even below 23 dBm.

Note: The total offset 43 dB includes the antenna gain 13 dBi and cable path loss 30 dB.

Marker 1: The UUT successfully registered with SAS Test Harness, when operating 13.69 dBm EIRP.

Marker 2: After the UUT granted/authorized by the SAS, it can transmit with power less than the maxEIRP granted from SAS.
