

S5521D

Quick Start Guide

Start Here

Phone overview

Getting started

Please make sure that the phone is powered off before proceeding.

1. Open battery cover

2. Install Micro SIM & memory card

3. Install battery

3. Install battery cover

Buttons

Power key: To power off S5521D, press and hold power key for a few seconds, then tap the options to confirm. When S5521D is on, press the power key once to activate or deactivate the screen.

Home key (○): Touch the key to return to the home screen. In idle screen, touch and hold the key recently accessed features.

Menu key (□): In idle screen, touch the key to view recently accessed features.

Back key (◀): Touch to go back to the previous menu.

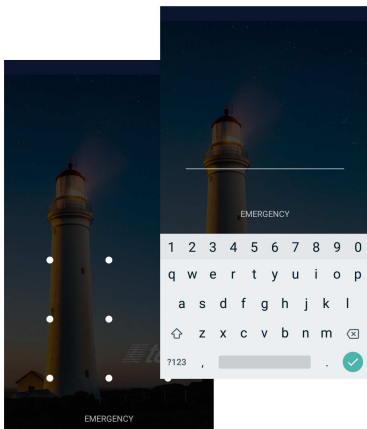

Screen

S5521D features a 5.5" screen with 480X960 high resolution. Which make your phone looks fascinating.

Screen lock

You can increase the security of your phone by selecting screen lock .Screen lock settings can be found under “Settings”>“Security”> “Screen lock”.

Customize home screen

In standby mode, touch and hold an empty area to add set wallpapers. You can also remove items from the home screen, move items, add items to home screen to customize the home screen.

Camera

S5521D is equipped with 8MP camera and a camcorder, which are designed for you to share wonderful moments with friends and family.

Adjust focus, exposure, zoom in or zoom out, switch between cameras and switch between the functions by flipping the icon on the screen.

Internet

You can enjoy network by selecting 3G, WLAN, GSM. Enjoy music, videos, apps and news anywhere and anytime as you like.

Make a call

You can make a call under the interface of Call log, contacts, favorites, message (which contains a phone number). In standby mode, press call key to make a call.

Messaging

Touch and hold the text box to select an input method. You can insert smiley, picture, audio or video files and send to multiple recipients.

Once you start a new conversation, you'll see it listed here

Email

The email app enables you to read, compose and send emails, and is configured to work with all the major email providers. S5521D supports multiple account mode, and you won't miss any email.

Music

S5521D supports various music formats, different sound effects and 4 categorizing, i.e. Artists, Albums, Songs and Playlists.

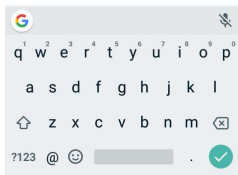

Photos

You will find it very easy to view all the photos. Flick right or left to move among images. Double-tap or pinch the photo to zoom. You can edit, share, print, and more.

Cut, copy, and paste

Touch and hold text content to bring up the magnifying glass, and then slide your finger to move the insertion points. Then tap to cut, copy, or paste. It is very easy to copy text from web pages, email, or text messages.

FCC Statement

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

SAR Information Statement

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while

operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is 0.480W/Kg and when worn on the body, as described in this user guide, is 0.960W/Kg(Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). The maximum scaled SAR in hotspot mode is 0.960W/Kg. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RFexposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on

FCC ID: 2ABOSSKYPLATC55 Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA)

web-site at <http://www.wow-com.com>. * In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a sub-substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 15mm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
