Re: FLYHT AFIRS 228S Tune-Up Procedure

To Whom It May Concern:

The AFIRS 228S contains Iridium 9235 and 9602 modems. All RF frequency controlling components are contained in these modems. There is no way to adjust the frequency or frequency range of the AFIRS 228S.

The output power of the AFIRS 228S may be tuned by adjusting the gains of the RFMM. This procedure is described in FLYHT document '131-0027_A_RFMM Calibration Test Procedure.pdf'
