

# **RF EXPOSURE EVALUATION**

## 1. PRODUCT INFORMATION

Product Description	Multi-Protocol Wireless Module with PA		
Model Name	BDE-RFM207P		
FCC ID	2ABRU-RFM207P		

# 2. EVALUATION METHOD AND LIMIT

Human exposure to RF emissions from mobile devices (47 CFR §2.1091) may be evaluated based on the MPE limits adopted by the FCC for electric and magnetic field strength and/or power density, as appropriate, since exposures are assumed to occur at distances of 20 cm or more from persons.

Frequency	E-field Strength	Magnetic Field	Power Density	Averaging Time
Range	(E)	Strength (H)	(S)	E  <sup>2</sup> ,  H  <sup>2</sup> or S
(MHz)	(V/m)	(A/m)	(mW/cm <sup>2</sup> )	(Minutes)
0.3 1.34	614	1.63	(100)*	30
1.34 30	824/f	2.19/f	(180/f <sup>2</sup> )*	30
30 300	27.5	0.073	0.2	30
300 1500	0 0		f/1500	30
1500 100,000		~C <del>~</del>	1.0	30

LIMITS FOR GENERAL POPULATION / UNCONTROLLED EXPOSURE

#### \*Note:

1. f= Frequency in MHz \* Plane-wave Equivalent Power Density

2. The averaging time for General Population/Uncontrolled exposure to fixed transmitters is not applicable for mobile and portable transmitters. See 47 CFR §§2.1091 and 2.1093 on source-based time-averaging requirement for mobile and portable transmitters.

### S=PG/4πR<sup>2</sup>

Where:

S=power density

P=power input to antenna

G=power gain of the antenna in the direction of interest relative to an isotropic radiator R=distance to the center of radiation of the antenna

Any report having not been signed by authorized approver, or having been altered without authorization, or having not been stamped by the Section (Inspection Stamp" is deemed to be invalid. Copying or excerpting portion of, or altering the content of the report is not permitted without the written authorization of AGS. The test results presented in the report apply only to the tested sample. Any objections to report issued by AGC should be submitted to AGC within 15day after the issued of the test report. Further enquiry of validity or verification of the test report should be addressed to AGC by agc@agc-cert.com.

A minimum test separation distance  $\geq 20$  cm is required between the antenna and radiating structures of the device and nearby persons to apply mobile device exposure limits. The distance must be at least 20 cm and fully supported by the operating and installation configurations of the transmitter and its antenna(s), according to the source-based time-averaged maximum power requirements of § 2.1091(d)(2). In cases where cable losses or other attenuations are applied to determine compliance, the most conservative operating configurations and exposure conditions must be evaluated.

Frequency	Output Power	Output Power	Power Density	Power Density Limit
MHz	dBm	mW	mW/cm <sup>2</sup>	mW/cm <sup>2</sup>
2402(125KHz)	4.485	2.809	0.00109	1
2480(500KHz)	16.497	44.638	0.01733	1
2480(1M)	17.678	58.587	0.02274	1
2480(2M)	17.664	58.398	0.02267	1

BT Antenna Gain=2.9dBi (Numeric 1.95), π=3.14

O-QPSK Antenna Gain=2.9dBi (Numeric 1.95), π=3.14

Frequency	Output Power	Output Power	Power Density	Power Density Limit
MHz	dBm	mW	mW/cm <sup>2</sup>	mW/cm <sup>2</sup>
2405	4.284	2.682	0.00104	1

Note:

- 1. Only the worst case recorded.
- 2. The BT and O-QPSK can not transmit simultaneously:

### 3. conclusion

Compliance the RF exposure requirement

Any report having not been signed by authorized approver, or having been altered without authorization, or having not been stamped by the "Dedicated Festing/Inspection Stamp" is deemed to be invalid. Copying or excerpting portion of, or altering the content of the report is not permitted without the written authorization of AGE The test results presented in the report apply only to the tested sample. Any objections to report issued by AGC should be submitted to AGC within 15day after the issuer of the test report. Further enquiry of validity or verification of the test report should be addressed to AGC by agc@agc-cert.com.
