## 1. ATTESTATION OF TEST RESULTS

**Applicant Information** 

Company Name: Hui Zhou Gaoshengda Technology Co.,LTD

Address: No.2, Jin-da Road, Huinan High-tech Industrial Park, Huizhou,

Guangdong, China

**Manufacturer Information** 

Company Name: Hui Zhou Gaoshengda Technology Co.,LTD

Address: No.2, Jin-da Road, Huinan High-tech Industrial Park, Huizhou,

Guangdong, China

**EUT Information** 

EUT Name: WIFI+BT Module Model: DCT10R2701

Brand: GSD

Sample Received Date: December 16, 2022

Sample Status: Normal Sample ID: 5634398

Date of Tested: December 16, 2022 to March 22, 2023

| APPLICABLE STANDARDS         |      |  |  |  |

#### 2. TEST METHODOLOGY

All tests were performed in accordance with the standard CFR 47 FCC PART 15 SUBPART E, ANSI C63.10-2013, CFR 47 FCC Part 2, CFR 47 FCC Part 15, KDB 789033 D02 v02r01, KDB414788 D01 Radiated Test Site v01, KDB 662911 D01 Multiple Transmitter Output v02r01, KDB 905462 D02 UNII DFS Compliance Procedures New Rules v02, KDB 905462 D03 UNII clients without radar detection New Rules v01r02, KDB 905462 D04 Operational Modes for DFS Testing New Rules v01 and KDB 905462 D06 802 11 Channel Plans New Rules v02.

### 3. FACILITIES AND ACCREDITATION

|               | A2LA (Certificate No.: 4102.01)  |
|---------------|--|
|               | UL Verification Services (Guangzhou) Co., Ltd. Song Shan Lake Branch.  |
|               | has been assessed and proved to be in compliance with A2LA.            |
|               | FCC (FCC Designation No.: CN1187)                                      |
|               | UL Verification Services (Guangzhou) Co., Ltd. Song Shan Lake Branch.  |
|               | Has been recognized to perform compliance testing on equipment subject |
|               | to the Commission's Declaration of Conformity (DoC) and Certification  |

|               | UL Verification Services (Guangzhou) Co., Ltd. Song Shan Lake Branch.  |
|               | has been assessed and proved to be in compliance with VCCI, the        |
|               | Membership No. is 3793.  |
|               | Facility Name:   |
|               | Chamber D, the VCCI registration No. is G-20019 and R-20004            |
|               | Shielding Room B , the VCCI registration No. is C-20012 and T-20011    |

#### Note1:

All tests measurement facilities use to collect the measurement data are located at Building 10, Innovation Technology Park, No. 1, Li Bin Road, Song Shan Lake Hi-Tech Development Zone Dongguan, 523808, People's Republic of China.

#### Note2:

The test anechoic chamber in UL Verification Services (Guangzhou) Co., Ltd. Song Shan Lake Branch had been calibrated and compared to the open field sites and the test anechoic chamber is shown to be equivalent to or worst case from the open field site.

#### Note3:

For below 30 MHz, lab had performed measurements at test anechoic chamber and comparing to measurements obtained on an open field site. And these measurements below 30 MHz had been correlated to measurements performed on an OFS.

REPORT NO.: 4790679247.2-1-RF-4 Page 8 of 336

## 4. CALIBRATION AND UNCERTAINTY

#### 4.1. MEASURING INSTRUMENT CALIBRATION

The measuring equipment utilized to perform the tests documented in this report has been calibrated in accordance with the manufacturer's recommendations and is traceable to recognized national standards.

#### 4.2. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

| Uncertainty               |  |
|---------------------------|--|
| 3.62 dB                   |  |
| 2.2 dB                    |  |
| 4.00 dB                   |  |
| 5.78 dB (1 GHz ~ 18 GHz)  |  |
| 5.23 dB (18 GHz ~ 26 GHz) |  |
| ±0.028%                   |  |
| ±0.0196%                  |  |
| ±0.766 dB                 |  |
| ±1.22 dB                  |  |
| ±2.76%                    |  |
| ±1.328 dB                 |  |
| ±0.746 dB (9 kHz ~ 1 GHz) |  |
| ±1.328dB (1 GHz ~ 26 GHz) |  |
|                           |  |

Note: This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

## WORSE CASE CONFIGURATIONS

The EUT was tested in the following configuration(s):

Controlled in test mode using a software application on the EUT supplied by customer. The application was used to enable a continuous transmission and to select the mode, test channels, bandwidth, data rates as required.

Test channels referring to section 5.4.

Maximum power setting referring to section 5.5.

Worst case Data Rates declared by the customer:

802.11a 20 mode: 6 Mbps 802.11n HT20 mode: MCS0 802.11n HT40 mode: MCS0 802.11ac VHT20 mode: MCS0 802.11ac VHT40 mode: MCS0 802.11ac VHT80 mode: MCS0

802.11a only support SISO mode.

802.11n HT20/HT40/ac VHT20/VHT40/VHT80 support SISO and MIMO mode.

802.11a SISO mode, Antenna 1 and Antenna 2 has the same power setting, so only Antenna 1 worst case test data were recorded in the report.

802.11n/ac SISO mode and MIMO mode have the same power setting, so only the worst case power mode(MIMO) will be record in the report.

802.11ac VHT20 and VHT40 mode are different from 802.11nHT20 and HT40 only in control messages, so for these 4 modes, only 802.11n HT20 and 802.11n HT40 worst case power modes radiated emission test data are recorded in the report.

The EUT has 2 separate antennas which correspond to 2 separate antenna ports. Core 1 and Core 2 correspond to antenna 1 and antenna 2 respectively.

The measured additional path loss was included in any path loss calculations for all RF cable used during tested.

Conducted output power, power spectral density tests separately on each port with all supported SISO & MIMO port combinations.

Radiated emissions tests were performed with the MIMO modes. These were found to be the worst modulation scheme with regards to emissions after preliminary investigations and, as this mode emits the highest conducted output power level, it was deemed to be the worst case.

REPORT NO.: 4790679247.2-1-RF-4 Page 17 of 336

#### 5.6. DESCRIPTION OF AVAILABLE ANTENNAS

| Antenna No. | Frequency Band | Antenna Type | Max Antenna Gain (dBi) |  |
|-------------|----------------|--------------|------------------------|--|
| 1           | 5150-5850      | PIFA         | 2.57                   |  |
| 2           | 5150-5850      | PIFA         | 2.57                   |  |

The EUT support Cyclic Shift Diversity(CDD) mode.

MIMO output power port and MIMO PSD port summing were performed in accordance with KDB 662911 D01. For the CDD results the Directional Gain was calculated in accordance with the following mothed.

For output power measurements:

Directional gain= Gant + Array Gain = 2.57 dBi

G<sub>ANT</sub>: equal to the gain of the antenna having the highest gain

Array Gain = 0 dB (i.e., no array gain) for  $N_{ANT} \le 4$ 

For power spectral density (PSD) measurements:

Directional gain= GANT + Array Gain = 5.58 dBi

Array Gain = 10 log(Nant/Nss) dB. Nant : number of transmit antennas

Nss: number of spatial streams, The worst case directional gain will occur when Nss = 1

| IEE Std. 802.11 | Transmit and Receive Mode | Description  |
|-----------------|---------------------------|--|
| 802.11a         | ⊠2TX, 2RX                 | ANT 1 and ANT 2 can be used as transmitting/receiving antenna. |
| 802.11n HT20    | ⊠2TX, 2RX                 | ANT 1 and ANT 2 can be used as transmitting/receiving antenna. |
| 802.11n HT40    | ⊠2TX, 2RX                 | ANT 1 and ANT 2 can be used as transmitting/receiving antenna. |
| 802.11ac VHT20  | ⊠2TX, 2RX                 | ANT 1 and ANT 2 can be used as transmitting/receiving antenna. |
| 802.11ac VHT40  | ⊠2TX, 2RX                 | ANT 1 and ANT 2 can be used as transmitting/receiving antenna. |
| 802.11ac VHT80  | ⊠2TX, 2RX                 | ANT 1 and ANT 2 can be used as transmitting/receiving antenna. |

Note: BT&WLAN 2.4G, BT & WLAN 5G, WLAN 2.4G & WLAN 5G can't transmit simultaneously (Declared by client)

Note: The value of the antenna gain was declared by customer.

REPORT NO.: 4790679247.2-1-RF-4 Page 18 of 336

## 5.7. SUPPORT UNITS FOR SYSTEM TEST

#### **SUPPORT EQUIPMENT**

| Item | Equipment  | Brand Name | Model Name  | Remark   |
|------|------------|------------|-------------|--|

#### 7. ANTENNA PORT TEST RESULTS

## 7.1. ON TIME AND DUTY CYCLE

#### **LIMITS**

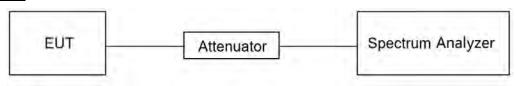

None; for reporting purposes only.

#### **TEST PROCEDURE**

Refer to KDB 789033 D02 General U-NII Test Procedures New Rules v02r01 section II.B.

The zero-span mode on a spectrum analyzer or EMI receiver, if the response time and spacing between bins on the sweep are sufficient to permit accurate measurements of the on and off times of the transmitted signal. Set the center frequency of the instrument to the center frequency of the transmission. Set RBW ≥ EBW if possible; otherwise, set RBW to the largest available value. Set VBW ≥ RBW. Set detector = peak or average. The zero-span measurement method shall not be used unless both RBW and VBW are > 50/T, where T is defined in II.B.1.a), and the number of sweep points across duration T exceeds 100. (For example, if VBW and/or RBW are limited to 3 MHz, then the zero-span method of measuring duty cycle shall not be used if T ≤ 16.7 microseconds.)

| 26 dB Emission Bandwidth | For reporting purposes only.                          | 5150 ~ 5250                               |
| 26 dB Emission Bandwidth | For reporting purposes only.                          | 5250 ~ 5350                               |
| 26 dB Emission Bandwidth | For reporting purposes only.                          | 5470 ~ 5725<br>5470 ~ 5600<br>5650 ~ 5725 |
| 6 dB Emission Bandwidth  | The minimum 6 dB emission bandwidth shall be 500 kHz. | 5725 ~ 5850                               |
| 99 % Occupied Bandwidth  | For reporting purposes only.                          | 5150 ~ 5825                               |

#### TEST PROCEDURE

Refer to KDB 789033 D02 General U-NII Test Procedures New Rules v02r01 section II.C1. for 26 dB Emission Bandwidth; section II.C2. for 6 dB Emission Bandwidth; section II.D. for 99 % Occupied Bandwidth.

Connect the EUT to the spectrum analyser and use the following settings:

| Center Frequency | The center frequency of the channel under test  |
|------------------|---|
| Detector         | Peak  |
| RBW              | For 6 dB Emission Bandwidth: RBW=100 kHz For 26 dB Emission bandwidth: approximately 1 % of the EBW. For 99 % Occupied Bandwidth: approximately 1 % ~ 5 % of the OBW. |
| VBW              | For 6 dB Bandwidth: ≥ 3*RBW For 26 dB Bandwidth: >3*RBW For 99 % Bandwidth: >3*RBW  |
| Trace            | Max hold  |
| Sweep            | Auto couple   |

a) Use the 99 % power bandwidth function of the instrument, allow the trace to stabilize and report the measured bandwidth.

#### Calculation for 99 % Bandwidth of UNII-2C and UNII-3 Straddle Channel:

For Example: Fundamental Frequency: 5720 MHz

99 % OBW: 21.00 MHz

Turning Frequency: 5725 MHz

99 % Bandwidth of UNII-2C Band Portion = (5725-(5720-(21.00/2)) = 15.50 MHz

99 % Bandwidth of UNII-3 Band Portion = (5720+(21.00/2)-5725) = 5.50 MHz

b) Allow the trace to stabilize and measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6/26 dB relative to the maximum level measured in the fundamental emission.

REPORT NO.: 4790679247.2-1-RF-4 Page 24 of 336

#### Calculation for 26 dB Bandwidth of UNII-2C Straddle Channel:

For Example: Fundamental frequency: 5720 MHz

26 dB BW: 20.00 MHz

FL: 5710.16 MHz FH: 5730.16 MHz

Turning Frequency: 5725 MHz

26 dB Bandwidth of UNII-2C Band Portion = 5725-5710.16=14.84 MHz

#### Calculation for 6dB Bandwidth of UNII-3 Straddle Channel:

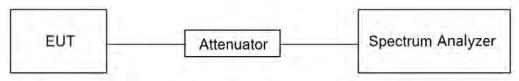

For Example: Fundamental frequency: 5720 MHz

6 dB BW: 16.44 MHz FL: 5711.76 MHz FH: 5728.2 MHz

Turning Frequency: 5725 MHz

6 dB Bandwidth of UNII-3 band Portion = 5728.2-5725=3.2 MHz

#### **TEST SETUP**

#### **TEST ENVIRONMENT**

| Temperature         | 25.1℃  | Relative Humidity | 55.2%    |
|---------------------|--------|-------------------|----------|
| Atmosphere Pressure | 101kPa | Test Voltage      | DC 3.3 V |

#### 7.3. CONDUCTED OUTPUT POWER

#### **LIMITS**

|                 | CFR 47 FCC Part15, Subpart E  |                            |  |
|-----------------|---|----------------------------|--|
| Test Item       | Limit   | Frequency Range<br>(MHz)   |  |
| Conducted       | ☐ Outdoor Access Point: 1 W (30 dBm) ☐ Indoor Access Point: 1 W (30 dBm) ☐ Fixed Point-To-Point Access Points: 1 W (30 dBm) ☐ Client Devices: 250 mW (24 dBm) | 5150 ~ 5250                |  |
| Output<br>Power | Shall not exceed the lesser of 250 mW (24dBm) or 11 dBm + 10 log B, where B is the 26 dB emission bandwidth in megahertz.                                     | 5250 ~ 5350<br>5470 ~ 5725 |  |
|                 | Shall not exceed 1 Watt (30 dBm).   | 5725 ~ 5850                |  |

Note:

The above limits are based upon the maximum antenna gain does not exceed 6 dBi. If transmitting antennas of directional gain greater than 6 dBi are used, the maximum conducted output power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### **TEST PROCEDURE**

Refer to KDB 789033 D02 General U-NII Test Procedures New Rules v02r01 section II.E.

## Method SA-2 (trace averaging across ON and OFF times of the EUT transmissions, followed by duty cycle correction.):

- (a) Measure the duty cycle D of the transmitter output signal.
- (b) Set span to encompass the entire 26 dB EBW or 99% OBW of the signal.
- (c) Set RBW = 1 MHz.
- (d) Set VBW  $\geq$  3 MHz.
- (e) Number of points in sweep  $\geq$  [2  $\times$  span / RBW]. (This gives bin-to-bin spacing  $\leq$  RBW / 2, so that narrowband signals are not lost between frequency bins.)
- (f) Sweep time = auto.
- (g) Detector = RMS (i.e., power averaging), if available. Otherwise, use sample detector mode.
- (h) Do not use sweep triggering. Allow the sweep to "free run."
- (i) Trace average at least 100 traces in power averaging (rms) mode; however, the number of traces to be averaged shall be increased above 100 as needed such that the average accurately represents the true average over the ON and OFF periods of the transmitter.
- j) Compute power by integrating the spectrum across the 26 dB EBW or 99% OBW of the signal using the instrument's band power measurement function with band limits set equal to the EBW or OBW band edges. If the instrument does not have a band power function, then sum the spectrum levels (in power units) at 1 MHz intervals extending across the 26 dB EBW or 99% OBW of the spectrum.
- k) Add [10 log (1 / D)], where D is the duty cycle, to the measured power to compute the average power during the actual transmission times (because the measurement represents an average over both the ON and OFF times of the transmission). For example, add [10 log (1 / 0.25)] = 6 dB if the duty cycle is 25%.

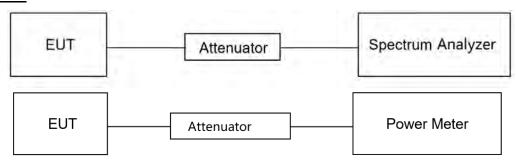

REPORT NO.: 4790679247.2-1-RF-4 Page 26 of 336

#### Method PM (Measurement using an RF average power meter):

- (i) Measurements may be performed using a wideband RF power meter with a thermocouple detector or equivalent if all of the following conditions are satisfied:
- a. The EUT is configured to transmit continuously or to transmit with a constant duty cycle.
- b. At all times when the EUT is transmitting, it must be transmitting at its maximum power control level.
- c. The integration period of the power meter exceeds the repetition period of the transmitted signal by at least a factor of five.
- (ii) If the transmitter does not transmit continuously, measure the duty cycle, x, of the transmitter output signal as described in II.B.
- (iii) Measure the average power of the transmitter. This measurement is an average over both the on and off periods of the transmitter.
- (iv) Adjust the measurement in dBm by adding 10 log (1/x) where x is the duty cycle (e.g., 10 log (1/0.25) if the duty cycle is 25 %).

Note: Method SA-2 was used for straddle channel output power test, and Method PM was used for testing rest channels

#### **TEST SETUP**

#### **TEST ENVIRONMENT**

| Temperature         | <b>25.1</b> ℃ | Relative Humidity | 55.2%    |

#### 7.4. POWER SPECTRAL DENSITY

#### **LIMITS**

|                           | CFR 47 FCC Part15, Subpart E   |                            |  |
|---------------------------|--|----------------------------|--|
| Test Item                 | Limit  | Frequency Range<br>(MHz)   |  |
| Power Spectral<br>Density | ☐ Outdoor Access Point: 17 dBm/MHz ☐ Indoor Access Point: 17 dBm/MHz ☐ Fixed Point-To-Point Access Points: 17 dBm/MHz ☐ Client Devices: 11 dBm/MHz | 5150 ~ 5250                |  |
| Delisity                  | 11 dBm/MHz   | 5250 ~ 5350<br>5470 ~ 5725 |  |
|                           | 30 dBm/500kHz  | 5725 ~ 5850                |  |

#### Note:

The above limits are based upon the maximum antenna gain does not exceed 6 dBi.

If transmitting antennas of directional gain greater than 6 dBi are used, maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### **TEST PROCEDURE**

Refer to KDB 789033 D02 General U-NII Test Procedures New Rules v02r01 section II.F.

Connect the EUT to the spectrum analyser and use the following settings:

For U-NII-1, U-NII-2A and U-NII-2C band:

| TOTO THE 1, O THE ENTAIN |  |
|--------------------------|--|
| Center Frequency         | The center frequency of the channel under test               |
| Detector                 | RMS  |
| RBW                      | 1 MHz  |
| VBW                      | ≥3 × RBW   |
| Span                     | Encompass the entire emissions bandwidth (EBW) of the signal |
| Trace                    | Max hold   |
| Sweep time               | Auto   |

#### For U-NII-3:

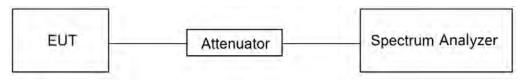

| Center Frequency | The center frequency of the channel under test               |
|------------------|--|
| Detector         | RMS  |
| RBW              | 500 kHz  |
| VBW              | ≥3 × RBW   |
| Span             | Encompass the entire emissions bandwidth (EBW) of the signal |
| Trace            | Max hold   |
| Sweep time       | Auto   |

Allow trace to fully stabilize and Use the peak search function on the instrument to find the peak of the spectrum and record its value.

Add 10 log (1/x), where x is the duty cycle, to the peak of the spectrum, the result is the Maximum PSD over 1 MHz / 500 kHz reference bandwidth.

#### **TEST SETUP**

#### **TEST ENVIRONMENT**

| Temperature         | <b>25.1</b> ℃ | Relative Humidity | 55.2%    |

#### 7.5. FREQUENCY STABILITY

#### **LIMITS**

The frequency of the carrier signal shall be maintained within band of operation.

#### **TEST PROCEDURE**

- 1. The EUT was placed inside an environmental chamber as the temperature in the chamber was varied between 0  $^{\circ}$ C  $\sim$  70  $^{\circ}$ C (declared by customer).
- 2. The temperature was incremented by 10 °C intervals and the unit allowed to stabilize at each temperature before each measurement. The center frequency of the transmitting channel was evaluated at each temperature and the frequency deviation from the channel's center frequency was recorded.
- 3. The primary supply voltage is varied from 85 % to 115 % of the nominal value for non hand-carried battery and AC powered equipment. For hand-carried, battery-powered equipment, primary supply voltage is reduced to the battery operating end point which shall be specified by the manufacturer.

Connect the EUT to the spectrum analyser and use the following settings:

| Center Frequency | The center frequency of the channel under test               |
|------------------|--|
| Detector         | Peak   |
| RBW              | 10 kHz   |
| VBW              | ≥3 × RBW   |
| Span             | Encompass the entire emissions bandwidth (EBW) of the signal |
| Trace            | Max hold   |
| Sweep time       | Auto   |

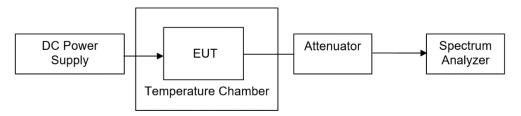

- 4. While maintaining a constant temperature inside the environmental chamber, turn the EUT on and record the operating frequency at startup, and at 2 minutes, 5minutes, and 10 minutes after the EUT is energized.
- 5. Allow the trace to stabilize, find the peak value of the power envelope and record the frequency, then calculated the frequency drift.

#### **TEST ENVIRONMENT**

|                      | Normal Test Conditions                    | Extreme Test Conditions                   |  |
|----------------------|---|---|--|
| Relative Humidity    | 20 % - 75 %                               | /   |  |
| Atmospheric Pressure | 100 kPa ∼102 kPa                          | 1   |  |
| Tomporatura          | T <sub>N</sub> (Normal Temperature):      | T <sub>∟</sub> (Low Temperature): 0 °C    |  |
| Temperature          | 25.1 °C                                   | T <sub>H</sub> (High Temperature): 70 °C  |  |
| Supply Voltage       | V <sub>N</sub> (Normal Voltage): DC 3.3 V | V <sub>L</sub> (Low Voltage): DC 2.805 V  |  |
| Supply Voltage       | V <sub>N</sub> (Normal Voltage). DC 3.3 V | V <sub>H</sub> (High Voltage): DC 3.795 V |  |

#### **TEST SETUP**

## 7.6. DYNAMIC FREQUENCY SELECTION (SLAVE)

#### **LIMITS**

#### (1) DFS Detection Thresholds

Table 3: DFS Detection Thresholds for Master Devices and Client Devices With Radar Detection

| Maximum Transmit Power   | Value (See Notes 1, 2, and 3) |
|--|-------------------------------|
| EIRP ≥ 200 milliwatt   | -64 dBm                       |
| EIRP < 200 milliwatt and power spectral density < 10 dBm/MHz                 | -62 dBm                       |
| EIRP < 200 milliwatt that do not meet the power spectral density requirement | -64 dBm                       |

Note 1: This is the level at the input of the receiver assuming a 0 dBi receive antenna. Note 2: Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.

Note3: EIRP is based on the highest antenna gain. For MIMO devices refer to KDB Publication 662911 D01.

#### (2) DFS Response Requirements

Table 4: DFS Response Requirement Values

| Parameter                         | Value                                      |  |
|-----------------------------------|--|--|
| Non-occupancy period              | Minimum 30 minutes                         |  |
| Channel Availability Check Time   | 60 seconds                                 |  |
| Channel Move Time                 | 10 seconds                                 |  |
| Charmer wove Time                 | See Note 1.                                |  |
|                                   | 200 milliseconds + an aggregate of 60      |  |
| Channel Closing Transmission Time | milliseconds over                          |  |
| Chainer Closing Transmission Time | remaining 10 second period.                |  |
|                                   | See Notes 1 and 2.                         |  |
| U-NII Detection Bandwidth         | Minimum 100% of the U-NII 99% transmission |  |
| U-INIT Detection Bandwidth        | power bandwidth. See Note 3.               |  |

Note 1: Channel Move Time and the Channel Closing Transmission Time should be performed with Radar Type 0. The measurement timing begins at the end of the Radar Type 0 burst.

Note 2: The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required facilitating a Channel move (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.

Note 3: During the U-NII Detection Bandwidth detection test, radar type 0 should be used. For each frequency step the minimum percentage of detection is 90 percent. Measurements are performed with no data traffic.

REPORT NO.: 4790679247.2-1-RF-4 Page 32 of 336

#### APPLICABILITY OF DFS REQUIREMENTS

A U-NII network will employ a DFS function to detect signals from radar systems and to avoid cochannel operation with these systems. This applies to the 5250-5350 MHz and/or 5470-5725 MHz bands.

Within the context of the operation of the DFS function, a U-NII device will operate in either Master Mode or Client Mode. U-NII devices operating in Client Mode can only operate in a network controlled by a U-NII device operating in Master Mode.

Table 1: Applicability of DFS Requirements Prior to Use of a Channel

|                                 | Operational Mode |                 |                   |
|---------------------------------|------------------|-----------------|-------------------|
| Requirement                     | ☐ Master         |                 | Client With Radar |
|                                 |                  | Radar Detection | Detection         |
| Non-Occupancy Period            | Yes              | Not required    | Yes               |
| DFS Detection Threshold         | Yes              | Not required    | Yes               |
| Channel Availability Check Time | Yes              | Not required    | Not required      |
| U-NII Detection Bandwidth       | Yes              | Not required    | Yes               |

Table 2: Applicability of DFS requirements during normal operation

|                                   | Operational Mode                               |                                     |  |
|-----------------------------------|--|-------------------------------------|--|
| Requirement                       | ☐ Master Device or Client with Radar Detection | ⊠ Client Without Radar<br>Detection |  |
| DFS Detection Threshold           | Yes  | Not required                        |  |
| Channel Closing Transmission Time | Yes  | Yes                                 |  |
| Channel Move Time                 | Yes  | Yes                                 |  |
| U-NII Detection Bandwidth         | Yes  | Not required                        |  |

| Additional requirements for devices with multiple bandwidth modes | ☐ Master Device or<br>Client with<br>Radar Detection | ⊠ Client Without Radar<br>Detection                  |
|---|--|--|
| U-NII Detection Bandwidth and<br>Statistical Performance Check    | All BW modes must be tested                          | Not required   |
| Channel Move Time and<br>Channel Closing Transmission Time        | Test using widest BW<br>mode<br>available            | Test using the widest BW mode available for the link |
| All other tests   | Any single BW mode                                   | Not required   |

Note: Frequencies selected for statistical performance check should include several frequencies within the radar detection bandwidth and frequencies near the edge of the radar detection bandwidth. For 802.11 devices it is suggested to select frequencies in each of the bonded 20 MHz channels and the channel center frequency.

#### PARAMETERS OF RADAR TEST WAVEFORMS

This section provides the parameters for required test waveforms, minimum percentage of successful detections, and the minimum number of trials that must be used for determining DFS conformance. Step intervals of 0.1 microsecond for Pulse Width, 1 microsecond for PRI, 1 MHz for chirp width and 1 for the number of pulses will be utilized for the random determination of specific test waveforms.

| Radar Type                  | Pulse Width<br>(µsec) | PRI<br>(µsec) | Number of Pulses                                   | Minimum Percentage<br>of Successful<br>Detection | Minimum<br>Number of<br>Trials |
|-----------------------------|-----------------------|---------------|--|--|--------------------------------|
| Q                           | 1                     | 1428          | 18   | See Note 1                                       | See Note 1                     |
| 1 1                         |                       | Test A        | (1)  |  |                                |
|                             | 1                     | Test B        | Roundup $\left( \frac{360}{19 \cdot 10^6} \right)$ | 60%  | 30                             |
| 2                           | 1-5                   | 150-230       | 23-29  | 60%  | 30                             |
| 3                           | 6-10                  | 200-500       | 16-18  | 60%  | 30                             |
| 4                           | 11-20                 | 200-500       | 12-16  | 60%  | 30                             |
| Aggregate (Radar Types 1-4) |                       |               | 80%  | 120  |                                |

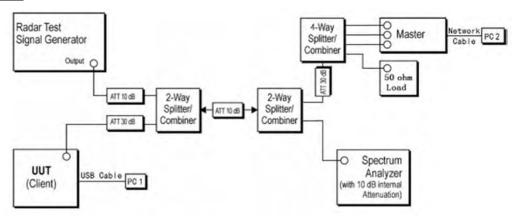

Note 1: Short Pulse Radar Type 0 should be used for the detection bandwidth test, channel move time, and channel closing time tests.

Test A: 15 unique PRI values randomly selected from the list of 23 PRI values in Table 5a.

Test B: 15 unique PRI values randomly selected within the range of 518-3066 µsec, with a minimum increment of 1 µsec, excluding PRI values selected in Test A

A minimum of 30 unique waveforms are required for each of the Short Pulse Radar Types 2 through 4. If more than 30 waveforms are used for Short Pulse Radar Types 2 through 4, then each additional waveform must also be unique and not repeated from the previous waveforms. If more than 30 waveforms are used for Short Pulse Radar Type 1, then each additional waveform is generated with Test B and must also be unique and not repeated from the previous waveforms in Tests A or B. Test aggregate is average of the percentage of successful detections of short pulse radar types 1-4.

#### Note:

#### **TEST PROCEDURE**

Below 30 MHz

The setting of the spectrum analyser

| RBW   | 200 Hz (From 9 kHz to 0.15 MHz)/ 9 kHz (From 0.15 MHz to 30 MHz) |
|-------|--|
| VBW   | 200 Hz (From 9 kHz to 0.15 MHz)/ 9 kHz (From 0.15 MHz to 30 MHz) |
| Sweep | Auto   |

- 1. The testing follows the guidelines in ANSI C63.10-2013 clause 6.4.
- 2. The EUT was arranged to its worst case and then turntable (from 0 degree to 360 degrees) to find the maximum reading. A pre-amp and a high pass filter are used for the test in order to get better signal level. Both Horizontal, Face-on and Face-off polarizations of the antenna are set to make the measurement.
- 3. The EUT was placed on a turntable with 80 cm above ground.
- 4. The EUT was set 3 meters from the interference receiving antenna, which was mounted on the top of a 1 m height antenna tower.
- 5. The radiated emission limits are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz Radiated emission limits in these three bands are based on measurements employing an average detector.
- 6. For measurement below 1 GHz, the initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak and average detector mode remeasured. If the emission level of the EUT measured by the peak detector is 3 dB lower than the applicable limit, the peak emission level will be reported. Otherwise, the emission measurement will be repeated using the quasi-peak and average detector and reported.

<sup>\*1</sup> beyond 75 MHz or more above of the band edge.

<sup>\*2</sup> below the band edge increasing linearly to 10 dBm/MHz at 25 MHz above.

<sup>\*3</sup> below the band edge increasing linearly to a level of 15.6 dBm/MHz at 5 MHz above.

<sup>\*4</sup> from 5 MHz above or below the band edge increasing linearly to a level of 27 dBm/MHz at the band edge.

REPORT NO.: 4790679247.2-1-RF-4 Page 37 of 336

7. Although these tests were performed other than open field site, adequate comparison measurements were confirmed against 30m open field site. Therefore sufficient tests were made to demonstrate that the alternative site produces results that correlate with the ones of tests made in an open field site based on KDB 414788.

8. The limits in CFR 47, Part 15, Subpart C, paragraph 15.209 (a), are identical to those in RSS-GEN Section 8.9, Table 6, since the measurements are performed in terms of magnetic field strength and converted to electric field strength levels (as reported in the table) using the free space impedance of  $377\Omega$ . For example, the measurement frequency X KHz resulted in a level of Y dBuV/m, which is equivalent to Y-51.5 = Z dBuA/m, which has the same margin, W dB, to the corresponding RSS-GEN Table 6 limit as it has to be 15.209(a) limit.

REPORT NO.: 4790679247.2-1-RF-4 Page 38 of 336

Below 1 GHz and above 30 MHz

The setting of the spectrum analyser

| RBW      | 120 kHz  |
|----------|----------|
| VBW      | 300 kHz  |
| Sweep    | Auto     |
| Detector | Peak/QP  |
| Trace    | Max hold |

- 1. The testing follows the guidelines in ANSI C63.10-2013 clause 6.5.
- 2. The EUT was arranged to its worst case and then tune the antenna tower (from 1 m to 4 m) and turntable (from 0 degree to 360 degrees) to find the maximum reading. A pre-amp and a high pass filter are used for the test in order to get better signal level. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- 3. The EUT was placed on a turntable with 80 cm above ground.
- 4. The EUT was set 3 meters from the interference receiving antenna, which was mounted on the top of a variable height antenna tower.
- 5. For measurement below 1 GHz, the initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured. If the emission level of the EUT measured by the peak detector is 3 dB lower than the applicable limit, the peak emission level will be reported. Otherwise, the emission measurement will be repeated using the quasi-peak detector and reported.

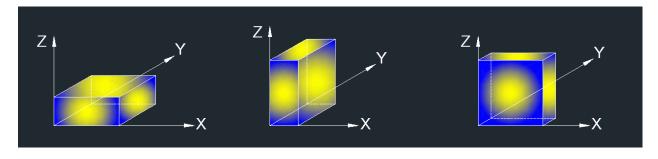

### Above 1 GHz

The setting of the spectrum analyser

| RBW      | 1 MHz                          |
|----------|--------------------------------|
| 1/18///  | PEAK: 3 MHz<br>AVG: see note 6 |
| Sweep    | Auto                           |
| Detector | Peak                           |
| Trace    | Max hold                       |

- 1. The testing follows the guidelines in KDB 789033 D02 General U-NII Test Procedures New Rules v02r01 section II.G.3 ~ II.G.6.
- 2. The EUT was arranged to its worst case and then tune the antenna tower (from 1 m to 4 m) and turntable (from 0 degree to 360 degrees) to find the maximum reading. A pre-amp and a high pass filter are used for the test in order to get better signal level. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- 3. The EUT was placed on a turntable with 1.5 m above ground.
- 4. The EUT was set 3 meters from the interference receiving antenna, which was mounted on the top of a variable height antenna tower.
- 5. For measurement above 1 GHz, the emission measurement will be measured by the peak detector. This peak level, once corrected, must comply with the limit specified in Section 15.209.
- 6. For measurements above 1 GHz the resolution bandwidth is set to 1 MHz, then the video bandwidth is set to 3 MHz for peak measurements and 1 MHz resolution bandwidth with 1/T video bandwidth with peak detector for average measurements. For the Duty Cycle please refer to clause 7.1.ON TIME AND DUTY CYCLE.

X axis, Y axis, Z axis positions:

Note 1: For all radiated test, EUT in each of three orthogonal axis emissions had been tested, but only the worst case (X axis) data recorded in the report.

REPORT NO.: 4790679247.2-1-RF-4 Page 40 of 336

### For Band edge:

#### Note:

- 1. Measurement = Reading Level + Correct Factor.
- 2. If the Peak values are less than the Average limit of 54 dBuV/m, the Average result is deemed to comply with Average limit.
- 3. Peak: Peak detector.
- 4. AVG: VBW=1/Ton, where: Ton is the transmitting duration.
- 5. For the transmitting duration, please refer to clause 7.1.
- 6. Only the worst data was recorded, if it complies with the limit, the other emissions deemed to comply with the limit.
- 7. Horizontal and Vertical have been tested, only the worst data was recorded in the report.
- 8. All modes, channels and antennas have been tested, only the worst data was recorded in the report.

### For Radiate Spurious emission 1GHz-7GHz:

#### Note:

- 1. Measurement = Reading Level + Correct Factor.
- 2. If the Peak values are less than the Average limit of 54 dBuV/m, the Average result is deemed to comply with Average limit.
- 3. Peak: Peak detector.
- 4. AVG: VBW=1/Ton, where: Ton is the transmitting duration.
- 5. For the transmitting duration, please refer to clause 7.1.
- 6. Filter losses were only considered in the spurious frequency bands and the authorized band was not corrected for Band reject filter losses.
- 7. Proper operation of the transmitter prior to adding the filter to the measurement chain.
- 8. Since non-restricted band peak emissions are less than the average limit, they also comply with the -27dBm/MHz (68.2dBuV/m) limit.
- 9. All modes, channels and antennas have been tested, only the worst data was recorded in the report.

## For Radiate Spurious emission 7GHz-18GHz:

#### Note:

- 1. Measurement = Reading Level + Correct Factor.
- 2. If the Peak values are less than the Average limit of 54 dBuV/m, the Average result is deemed to comply with Average limit.
- 3. Peak: Peak detector.
- 4. AVG: VBW=1/Ton, where: Ton is the transmitting duration.
- 5. For the transmitting duration, please refer to clause 7.1.
- 6. Filter losses were only considered in the spurious frequency bands and the authorized band was not corrected for High Pass Filter losses.
- 7. Proper operation of the transmitter prior to adding the filter to the measurement chain.
- 8. Since non-restricted band peak emissions are less than the average limit, they also comply with the -27dBm/MHz (68.2dBuV/m) limit.
- 9. All modes, channels and antennas have been tested, only the worst data was recorded in the report.

REPORT NO.: 4790679247.2-1-RF-4 Page 41 of 336

For Radiate Spurious emission 9kHz-30MHz:

#### Note:

- 1. Measurement = Reading Level + Correct Factor
- 2. If the Peak values are less than the QP limit, the QP result is deemed to comply with QP limit.
- 3. All 3 polarizations (Horizontal, Face-on and Face-off) of the loop antenna had been tested, but only the worst data recorded in the report.
- 4. All modes, channels and antennas have been tested, only the worst data was recorded in the report.

For Radiate Spurious emission 18GHz-26GHz:

### Note:

- 1. Measurement = Reading Level + Correct Factor.
- 2. If the Peak values are less than the Average limit of 54 dBuV/m, the Average result is deemed to comply with Average limit.
- 3. Peak: Peak detector.
- 4. All modes, channels and antennas have been tested, only the worst data was recorded in the report.

For Radiate Spurious emission 26GHz-40GHz:

### Note:

- 1. Measurement = Reading Level + Correct Factor.
- 2. If the Peak values are less than the Average limit of 54 dBuV/m, the Average result is deemed to comply with Average limit.
- 3. Peak: Peak detector.
- 4. All modes, channels and antennas have been tested, only the worst data was recorded in the report.

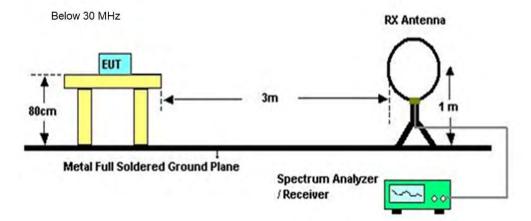

For Radiate Spurious emission 30MHz-1GHz:

#### Note:

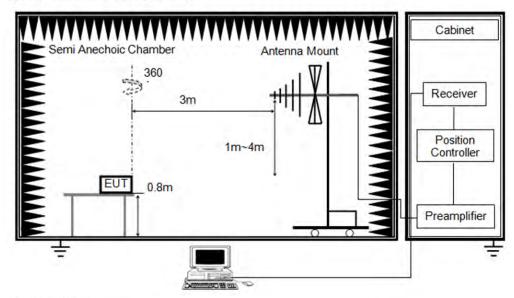

- 1. Result Level = Read Level + Correct Factor.
- 2. If the Peak values are less than the QP limit, the QP result is deemed to comply with QP limit
- 3. Test setup: RBW: 120 kHz, VBW: 300 kHz, Sweep time: auto.
- 4. All modes, channels and antennas have been tested, only the worst data was recorded in the report.
