

Schematics

The schematics for this device are highly top secret as the device is used for the financial transactions.

Therefore my client is not willing to let me transfer them to you.

What they would like to do is email the files directly to a nominated staff member at TIMCO along with an encryption key to unlock the documents.

Previously I have arranged this with Gretchen and your IT Manager for a similar type of device.

Can you please advise if this can also be arranged this time and can you advise how to best arrange for the document transfer to happen

Regards
