ID Label / Label Location

Pursuant to paragraph §2.925 of 47 C.F.R. the following electrically identical models 4360 and 4362 which are subject of this filing, shall bear a permanently affixed, readily visible label listing the information as specified in §2.926 and §15.19(a) of 47 C.F.R. Due to the specific use of these devices for hearing instruments, their external surface is in a permanent contact with the skin behind the ear. Therefore, it is not appropriate to permanently affix a label on the outer surface of the device as abrasion from handling and corrosion from sweat will render any writing illegible. The only possible place where the FCC ID of the device can be placed is the battery compartment. However, in this case the size of the FCC ID will be smaller than 2 points, which does not satisfy the requirements for “readily visible” label as defined in §2.925(d)(2) and §2.925(g).

Therefore, due to the very small size of the devices and pursuant to paragraph §15.19(a)(5) of 47 C.F.R., the FCC ID and the statement specified in §15.19(a)(3) are placed in the user manuals as shown in the example on Label Sample.
