

August 30, 2014

FCC ID labeling on product small and large transmitter/implants.

We are unable to use label/print materials in any form direct onto to product for the following reasons –

1. 3 pt. font would render text illegible – Only laser form of imprint on product can be used
2. Items are implanted into living animal research test subjects
3. No label can be used due to being in-vivo – toxicity issues of materials(aka biocompatibility)
4. No ink can be used due to being in-vivo – toxicity issues of materials(aka biocompatibility)
