# GETTING STARTED

Preparation Before Use

Please switch off your device before inserting or removing the Battery/SIM card or memory card.

## Installing SIM Card and Battery
Your device is provided with two SIM slots for two different SIM cards. The SIM card inserted in the slot1 is called Master SIM, and the other one in the slot2 is known as Slave SIM.

## Installing Memory Card
Your device supports T-Flash card, which is a multimedia memory card used to multiply the memory of the device. The T-flash card is small and should be pulled out and installed carefully and prudently in order to avoid any kind of damage.

## Charging the Battery

The device prompts a warning tone and message stating insufficient battery when the battery power of your device is low.

## Switch On/Off the Device

To turn on/off the device, press and hold the **End/Power Key.** If you have enabled the SIM Lock function then enter the PIN code (4 to 8 digits secret code of your SIM card). It is preconfigured and provided to you by your network operator or retailer. If you enter an incorrect PIN code 3 times in succession, your SIM card will be locked. To unlock it, you must obtain a code from your network operator.

## Automatic Customer Registration

After 4 hours of usage a SMS from the device will be sent automatically for the customer registration.

*Note: standard SMS charges apply.*

# Brief Intro To The Phone

## SAR (Specific Absorption Rate)

Your device conforms to the Indian guidelines for exposure to radio waves. The limits are given in terms of a unit referred to as the Specific Absorption Rate (SAR), which is a measure of the amount of radio frequency energy absorbed by the body when using a mobile phone. The SAR value as per the Indian guidelines standard is 1.6 watts per kg (Watt/kg), averaged over a 6 minutes period and taken over a volume containing a mass of 1 gram of human tissue. The highest SAR value of this device when tested is 1.312 **Watt/kg**.

## MAIN MENU

Menu guides you to the various applications, features and utilities available in your device. In the idle mode, press OK key to access the Main

Menu. Use the navigation keys to choose the desired operation and press Ok to enter the selected operation.

| Multimedia | Settings | Camera |
|---|---|---|
| Contacts | Messages | Call logs |
| Organizer | Calendar | Profiles |
| Internet | Games | File manager |

## MULTIMEDIA

This menu is specifically designed for the entertainment purpose of the user. To enter this menu, go to the Main Menu and select Multimedia. The various multimedia features offered by your device include **Camera**, **Video Recorder**, **Image**, **Audio,** **Video**, **Sound Recorder and FM Radio**.

## SETTINGS

This menu includes the following sub-menus: Phone settings, Display

4

settings, Security settings, Call settings, Connections.

## CAMERA

The phone is provided with a camera, which supports the photographing functions. In the capture interface, you can press up or down direction key to zoom in and zoom out, Roll the phone to align the camera to the picture and then press OK key to capture photos. Pictures will be saved in the file system of the phone or the memory card

## CONTACTS

Phonebook refers to the directory wherein all the Contacts are stored in an alphabetical order. You can view, edit, delete, send message and perform various other functions on each contact of your phonebook.

## MESSAGES

Your device features, sending and receiving of SMS (Short Message Service). Press LSK key to access Main Menu and then select Messages.

## CALL LOGS

Call Logs sub-menu lets you view the call details i.e. the missed, received & dialed call logs. Scroll up/down using the navigation keys to select a call and then press OK key to view the details and perform operations, such as View, Save, Call, Delete, Edit before call, Send message .

## ORGANIZER

The organizer menu gives you access to a number of features including **Calculator, Clock, Torch, STK, Unit conversion.**

## CALENDAR

Once you enter this menu, there is a monthly-view calendar for you to keep track of important appointments, etc. Days with events entered will be marked

## PROFILES

The mobile phone provides multiple user profiles, including Normal, Silent, Meeting, Indoor and Outdoor.

## INTERNET

To access this menu, enter the Main Menu in the standby mode and then select Internet. You can use the network-related services with this function.

## GAMES

A game name snake was embedded in the phone, for more specification, please refers to Help in the game.

# FILE MANAGER

File manager enables you to browse, open and manage the data saved in Memory card. The device provides a certain space for users to manage files and supports the Memory card. You can use the file manager to conveniently manage various directories and files on the Memory card. Choose Files to enter the root directory of the memory. The root directory will list the default folders, new folders and user files.

■     FCC Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in

accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

-- Reorient or relocate the receiving antenna.

-- Increase the separation between the equipment and receiver.

-- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

-- Consult the dealer or an experienced radio/TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission

limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating

can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is **1.04W/Kg** and when worn on the body, as described in this user guide, is **0.452W/Kg**. (Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). While there may be differences between the SAR levels of various phones and at various positions,

they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RFexposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of http://www.fcc.gov/oet/fccid after searching on **FCC ID: 2AC5CH008**

Additional information on Specific Absorption Rates (SAR) can be found on the Cellular

Telecommunications Industry Association (CTIA) web-site at http://www.wow-com.com. * In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a sub-stantial margin of safety to give additional protection for the public and to

account for any variations in measurements.

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 1.5 cm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
