「CT通测检测 TESTING CENTRE TECHNOLOGY 1. Test Certification

Report No.: TCT190910E039

Product: Mobile Data Terminal Model No.: C66 Additional N/A Model: **Trade Mark: CHAINWAY®** Applicant: Shenzhen Chainway Information Technology Co., Ltd. 9/F, Building 2, Dagian Industrial Park, Longchang Rd., District 67, Address: Bao'an, Shenzhen, China. Manufacturer: Shenzhen Chainway Information Technology Co., Ltd. 9/F, Building 2, Dagian Industrial Park, Longchang Rd., District 67, Address: Bao'an, Shenzhen, China. Date of Test: Sep. 11, 2019 – Sep. 29, 2019 Applicable FCC CFR Title 47 Part 15 Subpart C Section 15.225 Standards:

The above equipment has been tested by Shenzhen Tongce Testing Lab. and found compliance with the requirements set forth in the technical standards mentioned above. The results of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties.

4. Genera Information

4.1. Test Environment and Mode

Temperature:	24.0 °C
Humidity:	54 % RH
Atmospheric Pressure:	1010 mbar

Test Mode:

Operation mode: Keep the EUT in continuous transmitting with modulation	

The sample was placed (0.8m below 1GHz, 1.5m above 1GHz) above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

4.2. Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

Equipment	Model No.	Serial No.	FCC ID	Trade Name
IC Card	MJ-001	/		

Note:

1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.

- 2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended
 - use.

5. Facilities and Accreditations

5.1. Facilities

The test facility is recognized, certified, or accredited by the following organizations:

• FCC - Registration No.: 645098

Shenzhen Tongce Testing Lab

The 3m Semi-anechoic chamber has been registered and fully described in a report with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files.

 IC - Registration No.: 10668A-1 The 3m Semi-anechoic chamber of Shenzhen TCT Testing Technology Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing

5.2. Location

Shenzhen Tongce Testing Lab

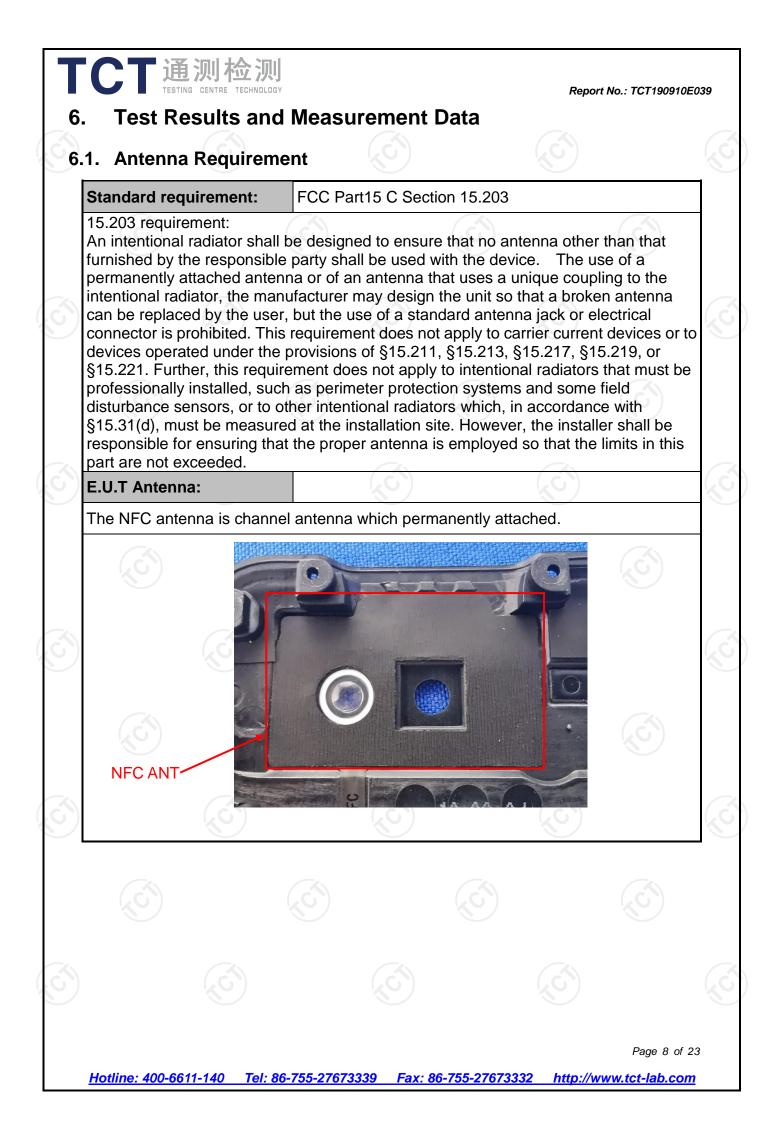

Address: 1B/F., Building 1, Yibaolai Industrial Park, Qiaotou, Fuyong, Baoan District, Shenzhen, Guangdong, China

TEL: +86-755-27673339

5.3. Measurement Uncertainty

The reported uncertainty of measurement $y \pm U$, where expended uncertainty U is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95 %.

No.	Item	MU	
1	Conducted Emission	±2.56dB	
2	RF power, conducted	±0.12dB	
3	Spurious emissions, conducted	±0.11dB	
4	All emissions, radiated(<1G)	±3.92dB	
5	All emissions, radiated(>1G)	±4.28dB	
6	Temperature	±0.1°C	
7	Humidity	±1.0%	X

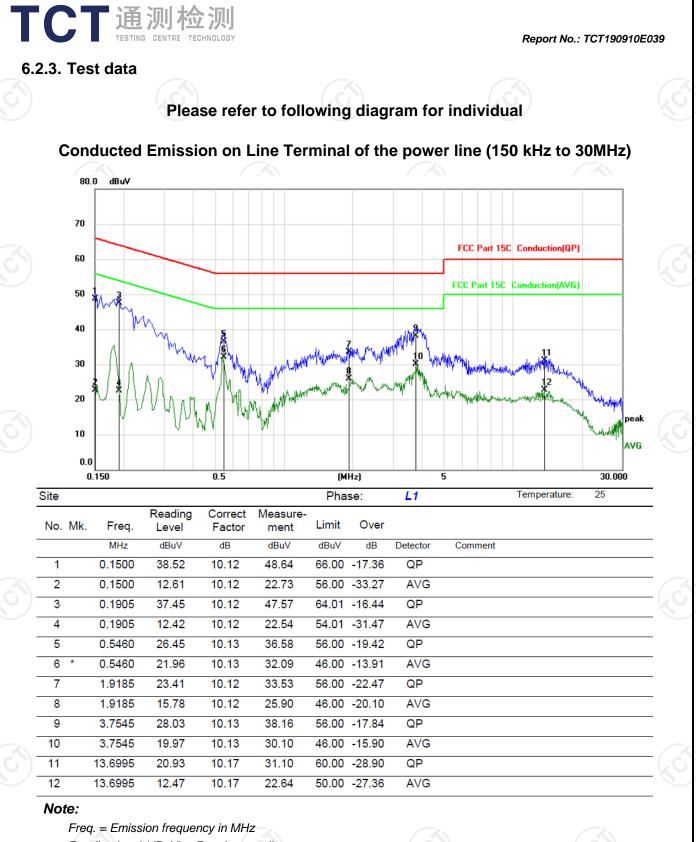

Report No.: TCT190910E039 6.2. Conducted Emission 6.2.1. Test Specification **Test Requirement:** FCC Part15 C Section 15.207 **Test Method:** ANSI C63.10:2013 Frequency Range: 150 kHz to 30 MHz Receiver setup: RBW=9 kHz, VBW=30 kHz, Sweep time=auto Frequency range Limit (dBuV) (MHz) Quasi-peak Average 66 to 56* Limits: 0.15-0.5 56 to 46* 0.5-5 56 46 5-30 60 50 Reference Plane LISN LISN 40cm 80cm Filter - AC power AUX E.U.T Equipment **Test Setup:** EMI Receiver Test table/Insulation plane Remark E.U.T: Equipment Under Test LISN: Line Impedence Stabilization Network Test table height=0.8m Test Mode: Refer to section 4.1 for details 1. The E.U.T is connected to the main power through a line impedance stabilization network (L.I.S.N.). This provides a 50ohm/50uH coupling impedance for the measuring equipment. 2. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block **Test Procedure:** diagram of the test setup and photographs). 3. Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10:2013 on conducted measurement. PASS Test Result:

	Report No.: TCT190910E
Test Procedure:	 The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter camber in below 1GHz. The table was rotated 360 degrees to determine the position of the highest radiation. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.
Test setup:	For radiated emissions below 30MHz Distance = 3m Computer Pre - Amplifier Pre - Amplifier (Receiver) 30MHz to 1GHz Computer Turn table Computer Pre - Amplifier Receiver Cround Plane Computer Pre - Amplifier Receiver Computer Pre - Amplifier Receiver Cround Plane
Test Mode:	Refer to section 4.1 for details

6.4.1. Test Specification

Test Requirement:	FCC Part15 C Section 15.215(c)	
Test Method:	ANSI C63.10: 2013	
Limit:	N/A	
Test Procedure:	 According to the follow Test-setup, keep the relative position between the artificial antenna and the EUT. Set to the maximum power setting and enable the EUT transmit continuously. Use the following spectrum analyzer settings for 20dB Bandwidth measurement. Span = approximately 2 to 3 times the 20 dB bandwidth, centered on a hopping channel; RBW≥1% of the 20 dB bandwidth; VBW≥RBW; Sweep = auto; Detector function = peak; Trace = max hold. Measure and record the results in the test report. 	R.C.
Test setup:	Spectrum Analyzer EUT	
Test Mode:	Refer to section 4.1 for details	
Test results:	PASS	C
