DFS Master Declaration Letter

Date: 2022/8/1

We have declared below featured for device,
FCC ID: 2ACCJB183

(1) DFS Device

- Master
 Client with Radar detection capability
 Client without radar detection capability

(2) Active / Passive Scanning, ad hoc mode access point capability

Frequency Band (MHz)	Scanning Plan	Ad Hoc Mode Capability	Access point Capability	WiFi Direct Group Owner	WiFi Direct Group Client
2412 - 2462	Active	No	Yes	Yes	No
5150 – 5250	Active	No	Yes	Yes	No
5250 – 5350	Active	No	Yes	Yes	No
5500 – 5720	Active	No	Yes	Yes	No
5745 – 5825	Active	No	Yes	Yes	No

(3) Country code selection capability to end user- Yes, No

If yes, please explain how it was implemented: (please also help to provide detail of options for each country selection)

(4) Transmission in 5600 MHz to 5650 MHz is notched - Yes, No

(5) Meet Part 15.202 requirement - Yes, No

A master device is defined as a device operating in a mode in which it has the capability to transmit without receiving an enabling signal. In this mode it is able to select a channel and initiate a network by sending enabling signals to other devices.

A client device is defined as a device operating in a mode in which the transmissions of the device are under control of the master. A device in client mode is not able to initiate a network.

(6) For Master devices that have software configuration control to operate in different modes (active scanning in some and passive scanning in others) in different bands (devices with multiple equipment classes or those that operate on non-DFS frequencies) or modular devices which configure the modes of operations through software, the application must provide software and operations description on how the software and / or hardware is implemented to ensure that proper operations modes cannot be modified by
