Based on KDB178919 D01, it applies below requirements,

- a. The new chip components are pin for pin compatible.
- b. The new chips have the same basic function as the old chip, from an external perspective (internal circuitry may differ).
- c. No change in radio parameters has occurred.
- d. The same conditions apply when a small area (approximately the same area as the chip) of the PCB is replaced with an equivalent chip.

The major change filed under this application is:

Only PA and ASM are changed, and the changed components are pin to pin compatible, they have the same basic function as the old ones, also, no change in radio parameters.  
No change in size of the chip.
